WISCONSIN: KENOSHA ARPT: Effective July 30, 1957 arpt will be perm clsd. (7-11)
LA CROSSE-RADIO: VOR radials 320°-335° have course roughness beyond tolerance but flyable. (6-13)
LODI-LAKELAND ARPT: New arpt reported: lat 43-19-40, long. 89-30-55; lctd 0.5 mi NE of Lodi; 1 strip -(E/W) 2640' x 200'; 87 oct gas; remarks- unattended. (1-14)
MADISON-TRUAX FLD: Caution crossing hwy lndg rnwys 22, 26, 31. E taxiway N of Admin Bldg perm closed to all acft over 10,000 lbs. Sod unsafe. (10-17)
MILWAUKEE-GENERAL MITCHELL FLD-TOWER: All acft apchg Milwaukee with intensions to land will, durg VFR conditions and if equip. with multiple rdo freq, make the first contact with Milwaukee apch ctl on 124.9 mc. This contact should be made at or before reaching a point 15 mi from the arpt giving position and altitude. (5-10) VHF/DF coverage 3500' MSL at 40 mi all azimuths. (6-7) FLD: Rnwy 7L-25R open days only. Obstn lgts on apch end of rnwy 13 are obscured by trees. Parking facilities lmtd-itinerant military acft on unofficial business may find parking facilities unavailable. Avoid confusing rnwy 1 with parallel taxiway to left. (8-15)
OSHKOSH-WINNEBAGO CO. ARPT: Caution-bldg const on fld - use rnwys only. Use only N/S and E/W rnwys during winter months. (2-21)
PHILLIPS ARPT: 100' unlgtd TV twr erected 900' W of S end of N/S rnwy. (6-26)
WYOMING: CASPER AIR TERMINAL-TOWER: ILS glide slope has moderate to severe path roughness above 7300' and beyond 6 n mi. Not to be used for auto pilot apchs. Effective June 9 through July 20, tower hours opern will be 0500-2300, daily. (6-4) FLD: Two 200' fences SW end of ramp not obstn lgtd. (11-16)
GILLETTE ARPT: 50'-75' W shoulder 1500' from N end N/S strip soft-clsd to heavy acft.
LARAMIE-RADIO: DME coverage 155°-225°, 35 n mi at 15,000'; 225°-300°, 26 n mi at 15,000'. July 15, VOR/DME shut down until approximately August 12- modernization. During this perdod the following airways and intersections are unusable: V-4 LAR-DEN, V-118 CYS-RKR, Carr and Nunn VHF Ints. V-4 LAR-CKW usable utilizing LAR LFR; MEA 16,000'; Minimum crossing altitude LAR W-bound 16,000'. V4N LAR-Gill Int usable utilizing 116° magnetic bearing to LAR LFR; MEA 14,000'; Minimum Crossing Alt Gill Int NW bound 14,000'. (7-15)
ROCK SPRINGS-RADIO: ILS glide slope has lgt to moderate roughness between OM and LFR.
SARATOGA-SHIVELY ARPT: Const in progress 1500' SW end NE/SW rnwy until about Aug 1- area mrkd by red flags. (7-5)
SHERIDAN-RADIO: VOR coverage limited to approximately 35 nautical miles between 150° and 280°. Moderate course roughness exists in mountainous area.
THERMOPOLIS ARPT: Caution - 1800' S end N/S runway closed - construction; only 3300' available.
TORRINGTON ARPT: Oil well storage tanks located on S edge E/W runway 300' from W end. Oil well pumping unit located on E side NE/SW runway 300' from SW end of runway. Low flying dusting and spraying type aircraft operating from airport through September 30. (4-11)
PUERTO RICO: SAN JUAN-ISLA GRANDE ARPT: First 500' W end runway 9R-27L unusable. Daylight operations proceed with caution - night operations observe threshold lights. Use outside taxiway in front of large hangar near entrance. Equipment on hangar ramp.
SAN JUAN-PUERTO RICO INTNL ARPT: Parking circles 2, 3, 4 and 5 on N departure ramp not fully visible from tower - caution. (6-7) Lighted temporary steel tower, 110' MSL located approximately 3500' off N boundary runway 7-25. (5-20)

REVISIONS TO STANDARD INSTRUMENT APPROACH PROCEDURES

Bearings, headings, courses & radials are magnetic. Elevations & altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.

CORRECTIONS

HUNTSVILLE, ALA - REDSTONE (ARMY) AIRPORT, TerVOR-17, Effect. 3 Aug.57: In second line of text, "Distance, Rocket FM@ or abeam HUA-RBn to Rny 3.2" correct to read, "Distance, Rocket FM@ or abeam HUA-RBn to Rny, 3.8".

STANDARD INSTRUMENT APPROACH PROCEDURE—TYPE RADAR

If a radar instrument approach is conducted at the below named airport, it shall be in accordance with the following instrument procedure, unless an approach is conducted in accordance with a different procedure authorized for such airport by the Administrator of Civil Aeronautics. Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the radar controller. From initial contact with radar to final authorized landing minimums, the instructions of the radar controller are mandatory except when (A) visual contact is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach. Except when the radar controller may direct otherwise prior to final approach, a missed approach shall be executed as provided below when (A) communication on final approach is lost for more than 5 seconds during a precision approach, or for more than 30 seconds during a surveillance approach; (B) directed by radar controller; (C) visual contact is not established upon descent to authorized landing minimums; or (D) if landing is not accomplished.

Notices to Airmen - page 2

VOL. 12, NO. 11 **AUGUST 6, 1957**

The AIRMAN'S GUIDE is issued every two weeks. This issue includes all data on record as of 0001 E.S.T. on the above date. For later information consult Teletype NOTAMS.

U.S. DEPARTMENT OF COMMERCE
CIVIL AERONAUTICS ADMINISTRATION
GENERAL SERVICES OFFICE

NOTICES TO AIRMEN

SPECIAL NOTICES

✓ Indicates new or revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a Notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the General Services Office, Attention: W-120 (formerly W-52), CAA, Washington 25, D. C.)

Permanent airport data changes should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide

---

HOW TO USE THE AIRMAN'S GUIDE: The Airman's Guide is issued every two weeks. Every issue contains a Notices to Airmen section; every other issue additionally contains a Radio Facility Data section; and once each quarter the Directory of Airports appears in an issue containing both of these sections.

CONTENTS: The contents of each issue are noted on the front cover. The first page of each section carries the Legend for interpreting codified information. Material normally included in each section is as follows:

(1) Notices to Airmen: Gives current condition of facilities and any special flight regulations or restrictions; cites data changes which serve to correct less frequently issued publications or charts; included as Special Notices are amendments to restricted areas, location identifiers, minimum en route IFR altitudes, civil airways, control areas, control zones, reporting points, VOR check points, standard instrument approach procedures, etc.

(2) Radio Facility Data: Lists radar facilities, instrument landing systems, and all other aeronautical radio facilities with their transmitting and guarded frequencies, identification, station class, range courses and remarks.

(3) Directory of Airports: This codified directory covers airport type, class, elevation, runway length and number, lights, servicing, obstructions, fuel octanes, weather reports available, unicom available, and remarks.

SPECIAL NOTICES: Special Notices usually appear at the beginning of the Notices to Airmen section. Special Notices are frequently indicated on the front cover, giving the subject and page number where the information is found.

CIVIL USE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission.

In the case of Air Force Bases, pilots must have on file with Headquarters USAF a "HOLD HARMLESS" AF form 180 and in their possession a properly signed and executed AF form 181 permit. Application for these forms may be made to: Assistant Chief of Staff, Installations, HQ, USAF, Washington 25, D. C. This regulation will be strictly enforced.

For Naval Installations, prior permission should be requested from the Chief of Naval Operations (OP 532) via the Commanding Office of the field concerned, (who has the authority to approve landing rights for certain categories of civil aircraft). However, with minor exceptions, authority to use Navy field is granted only to aircraft on government business, or when no suitable civil airport is available in the vicinity.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

FLIGHT PLANS: Pilots are urged to file VFR flight plans in person or by telephone prior to departure. Radio should be used for filing flight plans only when it is impossible to file in person or by telephone. This procedure is necessary in order to avoid congestion on the already busy air-ground communications channels. These channels should be reserved for essential in-flight communications. All pilots will benefit by following this practice.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical locations. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations).

Omniranges where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification:

e.g. Long Beach omnirange (Voice) . - .. -- . - . . . (LGB in Code)

For omniranges, as shown above, normal voice identification consists of the name of the omni followed by the word "omni". However, if the omni is unattended, i.e. if no facility for providing air-ground communications services is associated with the omni the word "unattended" will precede the word "omni". Example: AIRVILLE UNATTENDED OMNI.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciable higher rate of speed than the location identifier.

INTERFERENCE ON ATCS COMMUNICATIONS CHANNELS: If excessive interference is noted on ATCS VHF or UHF simplex frequencies, pilots should request the ATCS to reply on the VOR voice channel. (Reference to the Air Navigation Radio Aids Section will indicate which VORs have a voice channel). This will often expedite the exchange of messages as the VOR has a clear channel for communications.

FLIGHT IN RESTRICTED AREA: Pilots are responsible for obtaining an approval from the appropriate controlling agency prior to conducting flight in Restricted Areas, when governing restrictions are in effect. ATC is unable, because of communications workload and other factors, to obtain such approval for pilots. An ATC clearance should not be considered as authority to conduct flight in Restricted Areas EXCEPT where a control area overlays a Restricted Area as ATC has responsibility only within controlled airspace.

The printing of this publication has been approved by the Director of the Bureau of the Budget, April 23, 1956

****

For sale by Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. - Prices: annual subscription $2.25, domestic; $1.00 additional for foreign mailing; individual copies vary; this issue 25 cents.

RUNWAY VISUAL RANGE REPORTS AT NEWARK, N. J.: Effective March 3, 1956, measurements of runway visibility for Runway 4 at Newark, New Jersey, will be in terms of Runway Visual Range which is the distance high intensity runway lights can be seen by an observer located at the runway threshold viewing the lights in the same direction as a pilot making an approach.

The ILS and PAR instrument approach procedures for Newark have been amended to authorize 2600' of runway visual range as an additional operating minimum for straight-in approaches to Runway 4. When measurements of Runway Visual Range are being taken, the tower will give pilots intending to land straight-in on runway 4, the reported Runway Visual Range. When the meteorological ceiling and visibility (contained in "main body" of sequence report which is the average weather for the airport proper) are reported below minimums, (e.g. 200, 5), an approach may be conducted to Runway 4 provided Runway Visual Range is reported at or above 2600'. The "remarks" portion of the hourly weather sequence for Newark will report Runway Visual Range in hundreds of feet, and runway visibility will no longer be reported in miles and fraction.

Since Runway Visual Range recognizes the additional penetration provided by high intensity runway lights and is measured in terms of what a pilot actually sees, pilots will have better assurance of finding runway conditions substantially as reported when arriving over the threshold.

The Runway Visual Range minimum of 2600' is also based on the penetration ability of the approach lighting system installed at Newark which is designed to assure earlier transition from instrument to visual flight.

GLIDE SLOPE FLARE: Modification of null reference glide slope facilities will result in glide slope flare at about thirty (30) feet above runway. Caution advised on automatic approaches continued past runway threshold.

POSITION REPORTING PROCEDURE FOR IFR FLIGHTS OPERATING AT LEAST 1000 FEET ON TOP: Effective September 15, 1956, IFR flights cleared by ATC to operate at least 1000 feet on top shall conform to the following position reporting procedures:

1. Flights along airways. Regardless of the altitude being flown, pilots shall report only over those fixes that are designated as compulsory reporting points for all altitudes. ATC may specify additional reports as required.
2. Flights operating on a direct route. Regardless of the altitude being flown, pilots shall report over each reporting point specified in the flight plan (approximately 200 miles apart) and over each fix along the route designated as a compulsory reporting point for all altitudes. ATC may specify additional reports as required.

Pilots filing direct route flight plans requesting an altitude of a least 1000 feet on top should designate the route flight by appropriate fixes approximately 200 miles apart over which they plan to report.

IFR RATE OF CLIMB OR DESCENT: In the interest of standardizing operating procedures for IFR flight and to provide greater utilization of available airspace, pilots are requested to adhere to the following procedure when cleared by air traffic control to climb or descend in excess of 1000 feet to an approved altitude:

1. Unless cleared otherwise by air traffic control, climb as rapidly as practicable to 1000 feet below the assigned altitude and then not to exceed 500 feet per minute until the assigned altitude is reached.
2. Unless cleared otherwise by air traffic control, descend as rapidly as practicable to 1000 feet above the assigned altitude and then not to exceed 500 feet per minute until the assigned altitude is reached.

ATC DEPARTURE CLEARANCES: Effective November 1, 1956, air traffic controllers will discontinue issuing departure clearances specifying that any portion of the departures shall be conducted in "VFR conditions" unless provision of positive separation will result in an excessive departure delay and the pilot indicates that he will accept a VFR restriction. To reduce communications and expedite departures wherever possible, pilots should include in their requests for departure clearances a statement that they will accept a VFR restriction either during climb to cruising altitude or to a specified altitude.

INABILITY TO COMPLY WITH ATC CLEARANCES: The pilot should always advise air traffic control when his aircraft is not equipped or its performance is insufficient to comply with an issued air traffic control clearance. A brief reason such as "unable account loads or "unable transmit 3023.5" may be included if considered necessary for clarification. The pilot may then expect an amended air traffic control clearance.

TWO-WAY RADIO FAILURE: Under CAR 60.49 Radio Failure, pilots of IFR flights experiencing two-way radio failure are expected to adhere to the procedures prescribed on page 63 of the current Flight Information Manual under "Two-way Radio Failure," and "En Route Procedures."

However, if a pilot should become lost, or if other factors prevent the pilot from being able to comply with the provisions described on page 63, such pilots, as well as pilots of VFR flights, in the exercise of their emergency authority under CAR 60.2, may elect to attempt to alert civil or military radar systems by flying the appropriate pattern as described on page 49 of the current Flight Information Manual.

INTERFERENCE WITH SEARCH AND RESCUE OPERATIONS: Information received from air rescue units presents evidence that civilian pilots are interfering and, in some cases, jeopardizing aircraft engaged in rescue operations. Most of the instances are caused by pilots on sightseeing flights in the immediate area of an accident. Accordingly, the CAA Office of Flight Operations and Airworthiness strongly urges that pilots who are not engaged in the search and rescue operation refrain from conducting sightseeing flights at the scene of an accident while the rescue operations are being conducted.

FLIGHT OPERATION WITHIN DESIGNATED CONTROL ZONES: There have been an increasing number of incident reports filed in recent months by air traffic control facilities, related to aircraft landing at airports located within control zones, without a traffic control clearance when weather conditions are reported below VFR minimums. Designated control zones are shown on aeronautical charts and are indicated by broken-line circles or other shapes showing exact zone dimensions around certain airports.

Civil Air Regulations, Part 60, paragraphs .30 and .31, state that no aircraft may be flown in a control zone less than 500 feet vertically under, 1000 feet vertically over, or 2000 feet horizontally from any cloud formation, or beneath the ceiling when it is less than 1000 feet, unless authorized to do so by air traffic control.

CAR, Part 60, also requires a pilot to obtain a clearance under the following conditions:

1. When the ground visibility is less than 3 miles, no person shall take off or land at an airport within a control zone or enter the traffic pattern of such an airport.
2. When flight visibility is less than 3 miles within a designated control zone.

Air traffic clearances to conduct any operation within a control zone below basic VFR minimum weather conditions should be requested through the nearest available air traffic communications station, tower or center.

VOR AUTOMATIC REBROADCAST SYSTEM - MARFA, TEXAS: The Marfa, Texas VOR Automatic Rebroadcast system was commissioned January 24, 1957, receiving on frequencies 122.1, 126.7, 135.9, 255.4 and transmitting on voice channel of Marfa VOR 115.9 Mc.

The Marfa VOR does not have an associated ATCS or control tower and the purpose of the Automatic Rebroadcast System is to provide a means whereby aircraft in the area can exchange pertinent information and work out their own landing sequence or other traffic separation problems. Pilots operating in the Marfa area should guard the Marfa VOR for information broadcast from other aircraft. When approaching or departing Marfa, an abreviated flight plan should be transmitted "blind" for rebroadcast by the VOR.

The Automatic Rebroadcast System consists of receivers tuned to 122.1, 126.7, 135.9, and 255.4 Mc so interconnected that aircraft transmissions on these frequencies are broadcast automatically on the VOR voice channel. To prevent broadcast of more than one signal at a time, the first receiver energized by an aircraft transmission locks out the other receivers until the aircraft transmission is ended. To inform the pilot that his transmission was received and broadcast, the system automatically transmits a three-second 400-cycle acknowledgement tone signal at the end of each VOR transmission.

This is a trial installation and comments are solicited from all users. Mail to: Civil Aeronautics Administration, Attention - W-522, Washington 25, D. C.

NEW UNICOM FREQUENCY: Frequency 123.0 mc has been designated for UNICOM by the Federal Communications Commission where an airport is served by a control station. Where there is no control tower or communications station, 122.8 mc is the frequency designated for use. Also 122.8 mc may be used by acft in civil defense work. These frequencies shall not be used for air traffic control purposes and only one UNICOM will be authorized at each landing facility.

SIMULTANEOUS VOICE TRANSMISSIONS FROM A SINGLE LOCATION: At several CAA facilities, simultaneous voice transmissions are made from a single location. For example, the New York ATCS controls the transmitters at Idlewild, LaGuardia, Newark, Colts Neck, Caldwell and Wilton L/MF or VOR facilities.

To provide a uniformly brief announcement, generally for broadcast purposes, the name of the controlling facility, followed by the word AREA will be used, e.g., THIS IS NEW YORK AREA RADIO, etc.

Calls from aircraft will be answered using the name of the station as stated by the pilot, e.g., a pilot calling "Newark Radio" will be answered by the New York ATCS, "THIS IS NEWARK RADIO, etc."

The word "AREA" signifies that the transmission from the named (controlling) location is emanating simultaneously from one or more remotely controlled facilities, having a different name or names, as indicated in the ANRA Section of the AIRGI and/or applicable RF Charts.

A NOTAM will be issued from those facilities affected by the foregoing when the change to this procedure is made.

IN-FLIGHT WEATHER SAFETY SERVICE (Operational Test): Effective March 5, the U. S. Weather Bureau, in cooperation with CAA, has introduced on an operational test basis an In-Flight Weather Safety Service aimed specifically at serving airmen in flight. Special advices, identified as FLASH ADVISORIES, will be broadcast to provide airmen in flight with up to two hours advance notice on the development of areas of potentially hazardous flying weather and the trends for an additional several hours. The advices will deal with potentially hazardous weather such as tornadoes, hail, severe thunderstorm systems (excluding small, isolated thunderstorms), duststorms, icing and major turbulence conditions. Also included will be information on extensive areas of low ceiling and visibility, and strong surface winds.

Currently valid FLASH ADVISORIES will be included in the scheduled weather broadcast of CAA stations within 200 miles of the affected area. Additionally, FLASH ADVISORIES will be given to pilots contacting the stations by radio, as appropriate.

FLASH ADVISORIES will be issued by Weather Bureau FAWS centers for the respective areas of responsibility. (These areas coincide closely with the Air Route Traffic Control Areas shown on the USC&GS Civil Airways and Mileage Charts.) For ready identification by the pilot, FLASH ADVISORIES issued by FAWS Center will be numbered (or lettered) consecutively beginning at midnight of each day.

In-flight weather reports from pilots, particularly reports on indications of developing potentially hazardous weather, will be important to the success of the program and such in-flight reports are earnestly solicited.

Comments and suggestions concerning the FLASH ADVISORIES should be sent to Chief, U. S. Weather Bureau, Washington 25, D. C., Attention: 0-5.31.

WEATHER COLLECTION TIME CHANGE: Effective June 1, 1957, the starting time for hourly sequence collections of aviation weather reports on Service A teletypewriter circuits was changed from 30 minutes past the hour to the hour. Pilots should take full cognizance of this change when checking the latest weather before or in flight. Also, pilots should try to avoid telephoning Weather Bureau or CAA stations for weather information between 45 minutes after the hour and the hour because at this time the stations are routinely occupied with observing the weather.

RADIO INTERFERENCE (General): You can do your part toward reducing radio interference to aeronautical services from non-aeronautical sources which may be noted during flight if such is reported promptly to a CAA facility (preferably after landing) or to any FCC field office. Reports should state the frequency or channel affected, description of the interference, and the geographical area where the interference was observed. If known, reports should give the apparent cause of the interference such as radio stations, call letters when such can be identified, industrial plants, diathermy machines, power lines, television receivers, etc. Do not report interference caused by normal frequency congestion, i.e., signals from other aircraft using the frequency."

IDENTIFICATION OF AIRCRAFT: Pilots are requested to exercise care that the identification of their aircraft is clearly transmitted in each contact with an ATC facility. Also, pilots should be certain that their aircraft are clearly identified in ATC transmissions before taking action on an ATC clearance. Garbled aircraft identifications in radiotelephone transmissions should never be taken for granted but should always be checked.

NOTIFICATION OF NON-COMPLIANCE BY MILITARY AIRCRAFT: The 323rd Fighter-Bomber Wing, Bunker Hill AFB, Indiana is performing low altitude navigational training flights at two hundred feet for the purpose of pilot proficiency under the authority of Section 60.1(a) of the Civil Air Regulations. Route of flight: Bunker Hill AFB, Indiana heading 261° to Loda, Illinois; 280° to Lake Bloomington, Illinois; 059° to a point at latitude 40-55, longitude 88-24; 088° to latitude 40-53, longitude 86-53 (approximately 2 nautical mi North of Monon, Indiana); 112° climbing to traffic altitude to Bunker Hill AFB, Indiana, point of beginning.

The Army Aviation Training Detachment, Edward Gary Army Air Force Base, San Marcos, Texas, is conducting aerobatic training on civil airways V222 and V198 under authority of Part 60.1(a) of the Civil Air Regulations. The training activity is being conducted below 5000 feet MSL in VFR conditions between Smithville intersection and San Antonio VOR on V222, and between Eagle Lake and San Antonio VOR's on V198. Flights operating between those points on V222 and V198 at less than 5000 feet MSL should do so with extreme caution.

ATC PROCEDURES - RADAR TRAFFIC CONTROL: On page 67 of FIM, Volume 10, dated June 15, 1956, insert preceding the last sentence of the first paragraph:

"Therefore, aircraft must not deviate from headings issued by approach control and must not deviate from the normal final approach course unless a clearance to do so is received from air traffic control. After passing the approach fix (outermarker, radio range, etc.) on final approach, aircraft are expected to proceed straight to the airport and complete the apch or effect the missed approach procedure set forth for that airport".

And following the first sentence of the second paragraph, insert:

"Whenever the proposed routing beyond the short-range clearance limit differs from that filed in the original flight plan, the amended routing will be specified, in the short-range clearance issued to the pilot before takeoff. If a loss of two-way communications occurs, the pilot will be expected to follow the amended routing to filed flight plan route and/or destination. (Note: This procedure is also applicable when nonradar short-range clearance is issued)."

WASHINGTON, D. C. HIGH DENSITY AIR TRAFFIC ZONE: Effective April 15, 1957, all the airspace within the current boundaries of the Washington Control Zone extending upwards from the surface to and including an altitude of 3000 feet above the surface is designated as a High Density Traffic Zone, and the Washington National Airport is designated as a High Density Airport. Radio communication must be made with Washington National Airport control tower before commencing a take-off or landing at or entering, the traffic pattern of Washington National Airport, unless prior authorization from the Washington National Airport traffic control tower has been received by aircraft not equipped with functioning two-way radio.

Maximum speed within the zone is 180 mph or 160 knots indicated airspeed unless operational limitations for a particular aircraft require greater airspeeds, in which case the aircraft shall not be flown in excess of the minimum speed consistent with the safe operational limitations of the aircraft.

Pilots should use every effort to maintain a continuous listening watch while within the zone so as to receive any pertinent air traffic information which may be transmitted and thus be alerted to avoid collision hazard within zone.

NEWARK CEILING-VISIBILITY EVALUATION PROGRAM: This program, being conducted at Newark Airport by the U.S. Weather Bureau, changed from furnishing threshold contact height estimates to APPROACH LIGHT CONTACT HEIGHT estimates on May 1, 1957. These estimates will be given out only by the CAA local controller on 118.3 mc at the time each pilot reaches the outer marker inbound for a straight-in ILS approach to rnwy 4. Evaluation of the accuracy and usefulness of these estimates is based solely on the report given by the pilot. Therefore it is important for the report "APPROACH LIGHTS" to be given on 118.3 mc the instant the approach lights are sighted. All pilots are urged to visit the project building adjacent to the control tower or telephone the project personnel at MItchell 2-4414 and give their opinion as to whether the approach light contact heights are of more value than the threshold contact lights.

AIRMAN'S GUIDE PRICE CHANGE: Effective July 1, the annual subscription to the Airman's Guide is being reduced to $2.25 domestic ($3.25 foreign). The Flight Information Manual, which was formerly included in the subscription price to the Guide, is NOT included in the new price. However, all subscribers to the Guide will receive written notice from the Superintendent of Documents when the Manual is issued, giving the price and how it may be purchased. The Manual cost is expected to be approximately $0.50, so that the overall cost of Guide and Manual will remain about the same. The separation of the Guide and Manual is for bookkeeping purposes only; the Guide will continue to supplement the Manual as in the past.

(6 August 1957)

✓ON REQUEST REPORTING POINTS: The following on-request reporting points are designated, or corrected, as indicated, effective August 29, 1957:

DESIGNATED:

(1) VERA, TEXAS (VHF) INTSXN - the intsxn of the 092°M radial of the Guthrie, Texas, VOR and the 237°M radial of the Wichita Falls, Texas, VOR.

CORRECTED: (The following were cited incorrectly in Airman's Guide, Vol. 12, No. 10, dated July 23, 1957, under the pages and titles as indicated.)

(1) Page 39, Designated, Item 18 should read: LINESVILLE, PA. (VHF) INTSXN - the intsxn of the 009°T radial of the Jefferson, Ohio, VOR and the 203°T radial of the Erie, Pa. VOR.

(2) Page 39, Designated, Item 25 should read: PORTLAND, IND. (VHF) INTSXN - the intsxn of the 162°T radial of the Ft Wayne, Ind., VOR and the 279°T radial of the Sidney, Ohio, VOR.

(3) Page 39, Designated, Item 30 should read: SNYDERS, PA. (VHF) INTSXN - the intsxn of the 274°T radial of the Allentown, Pa. VOR and the 336°T radial of the Pottstown, Pa. VOR.

(4) Page 39, Redesignated, Item 17 should read: HADLEY, PA. (VHF) INTSXN - the intsxn of the 068°T radial of the Youngstown, Pa. VOR and the 174°T radial of the Erie, Pa. VOR.

(5) Page 40, Cancelled, Item 3 should read: BRADLEY, CALIF. (LF) INTSXN - the intsxn of the N crs of the Santa Barbara, Calif. LFR and the SW crs of the Fresno, Calif. LFR.

(6) Page 40, Cancelled, Item 10 should read: GLENWOOD, IOWA (LF) INTSXN - the intsxn of the SE crs of the Omaha, Neb. LFR and the E crs of the Lincoln, Neb. LFR.

(7) Page 40, Cancelled, Item 19 should read: LASCASSAS, TENN. (LF) INTSXN - the intsxn of the SE crs of the Nashville, Tenn. LFR and the 257°T brng from the Smithville, Tenn VOR.

✓EXPERIMENTAL LIGHTS ON U. A. L. AIRPLANE: Effective July 31 and during next six months, United Air Lines will operate over their approved route system a Douglas DC6B with experimental oscillating high intensity position lights. The navigational light distribution and coloring are identical with conventional light system. The three position lights flash and emit lights of greatly increased intensity. These lights are dimmed to one half normal intensity when airplane is on the ground.

ALTIMETER SETTING SERVICE - AIR ROUTE TRAFFIC CONTROL CENTERS:

The following governs issuance of altimeter settings by Air Route Traffic Control Centers to aircraft operating on an IFR flight plan and in direct communication with the Center:

1. Altimeter settings will be furnished, when requested by a pilot operating on an IFR flight plan, for those weather reporting stations within the center's control area.
2. Requests for altimeter settings at weather reporting stations not within the center's control area will be referred to the appropriate Air Traffic Communications Station.
3. The time and location of the weather station reporting the altimeter setting will be specified. The following phraseology will be used: The (Time) (Station Location) Altimeter (Setting) Example: "The One Four Three Zero Columbus Altimeter Three Zero Zero Two."

ATC PROCEDURES - APPROACH CONTROL: On page 66 of FIM, Volume 10, dated June 15, 1956, the following note should be added preceding the last paragraph:

"NOTE: A clearance for a specific type of approach (ILS, ADF, or Straight-in Approach) to an aircraft operating on an IFR flight plan does not necessarily mean that priority will be given over other traffic for a landing. Often because of local traffic or runway in use, it may be necessary for the controller, in the interest of safety, to provide a different landing sequence."

INABILITY TO USE VOR STATIONS IN THE FREQUENCY RANGE FROM 108.2 TO 111.8 MC: Pilots have reported inability to use VOR stations in the frequency range from 108.2 to 111.8 mc even though the acft receiver operated normally in the range from 112.0 to 117.0 mc. Unmodified early production combination VOR/Localizer receivers were so designed that the lower order of frequencies could be used for the Localizer function only. Such receivers should be modified to operate on the following frequency arrangement:

(1) The even tenth megacycle frequencies between 108.2 and 111.8 and every tenth megacycle between 112.0 and 117.9, inclusive, are utilized for VOR facilities. Example: 108.2, 108.4, 109.2, etc., and 112.0, 112.1, 112.2, 112.3, 115.6, 115.7, etc.

(2) The odd tenth megacycle frequencies between 108.1 and 111.9 are utilized for ILS localizer services. Example: 109.3, 109.5, etc.

Persons having any question about the ability ot their VOR receiver to provide proper signal coverage should contact the receiver manufacturer or an authorized repair agency. Most receiver manufacturers have developed a modification which will permit reception of the appropriate facility.

✓BLUE SPRINGS, MISSOURI VOR SHUTDOWN: During shutdown the following MEA's can be utilized:

FROM	TO	MEA
VOR civil airway V10		
Kansas City, Mo., VOR	Int R052 MKC and R137 STJ (Kearney Int Temp)	2400
Int R052 MKC and R137 STJ (Kearney Int Temp)	Int R052 MKC and R118 STJ (Lawson Int Temp)	2400
VOR civil airways V4N, V12N, V116

✓RESTRICTED AREA AMENDMENTS: The following Restricted Areas shall become effective as indicated:

(Part 608 - Restricted Area - Amendment 205)

Effective August 14, 1957

(1) Section 608.11, the Fort McClellan, Alabama, area (R-131) amended December 14, 1955 in 20 F.R. 9341, is further amended by changing the "Designated Altitudes" column to read: "Surface to 24,000 ft MSL".

(2) Section 608.11, the Fort Rucker (formerly called Camp Rucker), Alabama, area (R-156 formerly D-156) amended October 31, 1951 in 16 F.R. 11066, is further amended by changing the "Designated Altitudes" column to read: "Surface to 24,000 ft MSL."

(3) Section 608.19, the Fort Gordon (formerly called Camp Gordon), Georgia, area (R-385) amended March 24, 1956, in 21 F.R. 1819, is further amended by changing the "Designated Altitudes" column to read: "Surface to 24,000 ft MSL".

(4) Section 608.31, the Grand Marais, Minnesota, area (R-187) amended July 26, 1956 in 21 F.R. 5619, is further amended by changing the "Description by Geographical Coordinates" column to read: "From lat 47-04-00, long. 90-35-00; to lat 47-28-00, long. 89-30-00; to lat 47-50-00, long. 89-46-00; to lat 47-37-00, long. 90-24-00; to lat 47-22-00, long. 90-50-00."

(5) Section 608.48, the Fort Jackson, South Carolina, area (R-114) amended May 19, 1956 in 21 F.R. 3309, is further amended by changing the "Designated Altitudes" column to read: "Surface to 24,000 ft MSL".

(6) Section 608.55, the Yakima, Washington, area (R-247) amended April 3, 1956 in 21 F.R. 2125 is further amended by changing the "Controlling Agency" column to read: "Commanding Officer, Yakima Firing Center, Washington".

AERONAUTICAL CHARTS OF THE U. S. COAST AND GEODETIC SURVEY

New editions of the charts listed below will be published in about one month making former prints obsolete for use in aviation. Orders for these particular charts should be kept to a minimum until new edition is printed.

Casper	Miami	Pittsburgh Local	WAC 310
Charlotte	Norfolk	Philadelphia Local	WAC 357
Chicago	Orlando	Washington Local	WAC 358

AIRPORT AND RADIO NOTICES

LEGEND

(3-31) - Month and day item was reported.

** - New or revised airport, caution area or miscellaneous data. Pilots should inscribe this information on charts and records.

★ - New or revised radio data. Pilots should inscribe this information on charts and records.

NOTE: Because of space, limitations, such data usually are cited only once.

ALABAMA: ANNISTON-RADIO: VOR courses 360°-07° have bends and roughness out of tolerance. (12-1)

AUBURN-OPELIKA ARPT: Lgtg facs inop. (7-6)

BESSEMER-DURHAM ARPT: Caution-auto drag strip runs parallel to sod landing strip with separation of 50'. Auto racing is NOT done on rnwy. Drag strip ends are mrkd. Racing is done on Sun only. (9-28)

BIRMINGHAM-RADIO: VOR operg test basis only, at lat 33-40-11, long. 86-53-58, about 10 n mi NW Birmingham Mun Arpt. (12-14) Caution - all arwys and Ints based on Birmingham or Meridian VORS are not usable for navigational purposes until the stns are recmsnd at new lctns. (4-18)

BIRMINGHAM ARPT-TOWER: Soon MM and LMM will be shut down - relctn. (6-4) FLD: Caution - tfc operg in area from 165° clockwise thru 235° not visible from twr to dist of 4 s mi. Rnwy 8-26 perm clsd to high performance single engine conventional lndg gear type acft, including T-6. Rnwy 18-36 clsd between 0800-1700 daily unless otherwise advised by ctl twr. (7-9) Acft requiring after-burners prohibited use of arpt. Exten const work in progress SW end NE/SW rnwy. (4-9) ILS apch light lane shut down until approx thru Nov for relctn due rnwy ext. (5-1)

ALABAMA: DOTHAN-NAPIER FLD: Caution - helicopters from Rucker Army Air Base trng.
EVERGREEN-RADIO: VOR radials 320° thru N unusable acct severe scalloping and bends.
EVERGREEN-MIDDLETON ARPT, 20, MSY-ATL: Rnwy and threshold lgts inop. (2-6)
HUNTSVILLE-RADIO: VOR radials 005°-030° have roughness and bends out of tolerance.
MOBILE-RADIO: June 19, VOR arwy radials flgt-checked. Radial 018°-028° out of tolerance due to severe scalloping. (6-19)
MOBILE-BATES FLD-TOWER: June 18, ILS not to be used for automatic approach below 300'. (6-18) FLD: Due space shortage, all transient and lcl acft not permitted parking space on admin bldg ramp xcpt enplaning and deplaning passengers. Use facs E side of fld. (11-10) Unlgtd trees penetrate apch zone to all rnwys. Use caution. 200' and 1/2 mi is absolute tk-off min for all acft. (4-22)
MONTGOMERY-SPECIAL NOTICE: All acft operg in the Maxwell AFB and Dannelly Fld ctl zones are cautioned to maintain cont rdo ctc with the appropriate ctl twr. Exten flying of both conventional and jet type acft in progress at both arpts. (4-19)
MONTGOMERY-DANNELLY FLD-TOWER: ILS back course unusable - low clearance areas. FLD: Dips in E/W rnwy 1500' from E end. Lgtd ditch approx 200' NE of apch end of rnwy 21. Twr unable to ctl taxiing acft on E/W taxiway from a point adj to ANG hangar to W end. Use caution taxiing. (2-11)
MUSCLE SHOALS-RADIO: VOR courses 020°-050°, 110°-150° and 285°-335° clockwise from stn out of tolerance beyond 15 n mi acct scalloping and bends. (11-2)
ARIZONA: AJO ARPT: Beacon and lights inoperative. (6-18)
CLEMENCEAU-COTTONWOOD-CLEMENCEAU ARPT: All servicing temp suspended. Fld open days only. Rnwy avail. Ngts upon prior req. Emerg only. (4-23)
COCHISE-RADIO: VOR/DME coverage 015°-045°, 30 n mi; 090°-110°, 40 n mi; 190°-215°, 35 n mi; 215°-235°, 30 n mi; 235°-255°, 35 n mi at MEA. (5-8)
FT. HUACHUCA-SPECIAL NOTICE: Caution - extensive artillery firing and drone flying in immediate vicinity. Two-way rdo and prior clearance from Libby AAF twr required before flgt within R-181. Libby twr gds: 121.5, 122.5, 126.3, 126.18, 243.0 mc. Rdo bcn (FHU 410 kc) and TVORW(FHU 111.6 mc) only rdo aids to air nav suitable for normal use. Other experimental rdo nav aids oper from time to time not suitable for use under any circumstances. Army Electronic Proving Ground reports that on several occasions, civil acft have been endangered by failure to observe the requirements listed. (4-19)
GILA BEND-RADIO: VOR has slow bends and scalloping starting at 17 n mi and 8000' MSL on 247° radial beyond tolerance. (6-24)
GLEN CANYON DAM SITE-SPECIAL NOTICE: Pilots should not fly below canyon rim. Cables strung across canyon. (11-1)
GRAND CANYON-SPECIAL NOTICE: Pilots should not fly below rim of canyon. Cable not readily visible to acft strung across canyon lctd near Quartermaster Point in Lower Granite Gorge between Pierce Ferry and Spencer Canyon. (1-2)
**KINGMAN ARPT: Fld lgts are operg under rdo ctl. It is avail cont during hrs of darkness. The operg characteristics consist of 3 phases as follows: (1) To activate: Three pulses of acft VHF transmitting microphone button on 121.7 mc when within a ten mi radius of arpt. (2) Off cycle: Automatic cut-off after activation is adjusted to twenty-five min, of which the last two min of opern presents a visual warning, or attention signal by blinking the fld lgts, alternating one second off, four seconds on. (3) Restoring time: Three pulses of the VHF transmitting microphone button on 121.7 mc during this visual blinking alert signal, (or at any time during the ON cycle) will restore the operg time to twenty-five min. The pulse train sequence three should be consecutive with not less than onehalf second spacing. This facility is avail. for the use of all acft. (7-17)
PHOENIX-SPECIAL NOTICE: Extreme caution-area between Phoenix VOR & Hassayampa VOR on Victor arwy 16 & Green 5. Extensive high performance, jet acft cross these arwys when departing & arriving Luke AFB in connection with trng conducted Gila Bend Restricted Areas (R-309, R308). This tfc generally crosses V-16 & Green 5 between Hassayampa VOR & town of Tolleson (11 mi W of Phoenix) at alts of 3000' MSL & below, 0175 thru 1600, Mon thru Fri. (3-1) All flgts operg thru this area maintain at least 4000' MSL. Flgts lndg or departing within area advised to exercise extreme caution below 4000' MSL. (5-7)
PHOENIX-SKY HARBOR ARPT-SPECIAL NOTICE: Following changes in instrument apch procedures: LFR procedure: Initial approach from Perryville FM 4000, from Tolleson Int 2600. Missed apch: Climb to 2500 on W course PHX LFR, make right climbing turn returning to LFR. Hold on E course LFR at 5000 in standard pattern within 15 mi. VOR procedure: Initial apch from Perryville FM 4000, from Tolleson Int 2600. Missed apch: Climb to 2500 on radial 258, make a right climbing turn, returning to VOR. Hold east of VOR on radial 076 at 5000 in standard pattern within 15 mi. Tolleson Intersection - Int ARIZONA: GBN VOR radial 027 and PHX VOR radial 258 or W course PHX LFR. All other items these procedures unchanged. (6-14)
**PHOENIX-SKY HARBOR ARPT: Clsd to mil F-89 type acft rqrg use of after burners for tk-off, xcpt prior permission arpt manager. (12-7) Functioning 2-way rdo rqrd. (7-3)
PRESCOTT-RADIO: VOR coverage 185°-225°, 35 n mi at 10,000'; 135°-145°, and 165°-185°, 39 n mi at 10,000'.
SALOME ARPT, 27B, LAX-PHX: Caution - puncture vines. (6-18)
SAN SIMON-RADIO: VOR coverage 030°-070°, 30 n mi; 160°-260°, 30 n mi. (7-17)
SCOTTSDALE-THUNDERBIRD #2 ARPT: Closed. (3-26)
TUCSON ARPT - SPECIAL NOTICE: As required, target towing on a direct route off arwy to Ajo, Ariz to be conducted wk-ends - caution. (2-15)
TUCSON-RADIO: VOR/DME coverage: 360°-050°, 35 n mi 11,000';050°-060°, 22 n mi 11,000';060°-075°, 35 n mi 11,000';075°-085°, 21 n mi 11,000';090°-170°, 40 n mi 12,000'; 225°-230°, 40 n mi 7,000';330-345°, 35 n mi 11,000';345°-360°, 25 n mi 11,000. (7-17)
TUCSON-DAVIS MONTHAN AFB-RADIO: USAF UHF/DF steers unreliable beyond 35 mi at or below the following alt: (a) NW quad 10,000'; (b) SW quad 10,000'; (c) SE quad 12,000' (d) NE quad 13,000'. (6-20)
YUMA-RADIO: VOR coverage 280°-300°, 30 n mi MEA. (5-18)
YUMA-VINCENT AFB: All acft not equipped with 2-way rdo are advised to use extreme caution while operg within a 5 mi radius of arpt due to heavy jet tfc. B-57 type acft towing 10,000' of cable and tow target in vcnty. All acft refrain from flying in close proximity of B-57 type acft in Yuma area. (2-11)
ARKANSAS: BLYTHEVILLE -SPECIAL NOTICE: All acft operg under VFR adj to Blytheville AFB are advised to use extreme caution due to extensive IFR jet tfc. (7-18)
✱EL DORADO ARPT: 300'(560'MSL) lgtd twr erected 1.8 n mi WNW(295°T) at lat 33-11-52, long. 92-41-23. (6-20)
PINE BLUFF-RADIO: VOR shut down. During shutdown, VOR flgts authorized to use PBF homing fac in lieu VOR EXCEPT V-16S TXK to PBF unusable. Ints and alts as charted.
TEXARKANA-RADIO: DME coverage 145°-235°, 1700' MSL 30 n mi; 235°-270°, 1800'MSL 35 n mi. (5-21)
CALIFORNIA: APPLE VALLEY ARPT: Caution - const - men and equip. on fld. (4-26)
✱ARCATA-RADIO: VHF/DF cmsnd. Freqs: 122.1, 126.7, 121.5, 135.9 mcs. (8-5)
BRASS LAKE-WISHON ARPT: Clsd due grading and reoiling. (6-13)
BECKWOURTH-PLUMAS CO. ARPT: Clsd due rnwy resurfacing. (6-24)
BLYTHE-RADIO: VOR/DME coverage 45 n mi except 25 n mi 180°-200°; 30 n mi 280°-300° 20 n mi 300°-320°; 35 n mi 345°-015° at MEA. (8-20)
BONSALL-SHEARER'S RANCH ARPT: Abandoned until further notice. (2-4)
BRAWLEY ARPT: Rnwy 12-30 clsd until about Aug 20. Use parallel dirt rnwy. (7-26)
BURBANK-LOCKHEED AIR TERMINAL-TOWER: ILS lclzr will be shut down approx Sept 15 - relctn of apch lgt sys. Glide slope angle will be 3°.
CAMARILLO-RADIO: All courses have multiples. (6-17)
CRESCENT CITY-RADIO: VOR arwy radials flgt-checked. Courses 90°-330° usable dist 22 n mi; 350°-90°, 26 n mi at 7000'; 43 n mi at 8000'.
DAGGETT-RADIO: VOR flgt-checked on arwy radials only.
DINUBA-ALTA ARPT: Arpt unlgtd. (4-22)
DIXON ARPT: Closed. (8-30)
EL MONTE-EL MONTE-L.A. ARPT: 2500' rnwy clsd during Aug. (7-25)
ELSINORE ARPT: Caution-glider activity week ends. Squirrel holes S edge of lndg area.
FILLMORE-RADIO: VOR coverage 320°-355°, 35 n mi at 11,000'; 280°-320°, 26 n mi at 11,000'.
FT. JONES-RADIO: VOR has lgt course roughness all quads. Only arwy radials flgt-checked.
FORTUNA-RADIO: VOR has lgt to moderate scalloping beyond 26 n mi. Only arwy radials flgt-checked. (10-6) DME coverage 335°-350°, 43 n mi at 3000'; 350°-10°, 43 n mi at 8000'; 10°-30°, 43 n mi at 9000'; 30°-120°, 35 n mi at 9000'; 120°-150°, 35 n mi at 6500'; 150°-335°, over water, not checked.
FRANKLIN ARPT: Rnwy 15-33 clsd. (7-12)
FRESNO AIR TERMINAL ARPT: Extreme caution advised in vicinity of arpt, particularly when using VOR arwys. Jet acft climbing and descending in areas of extended centerlines rnwys 29-11 and areas N and E of arpt. Const and equip. both ends rnwy 29-11 and adj taxiways. (2-5)
**GLENDALE-GRAND CENTRAL ARPT: NW/SE taxi strips SW side of fld perm clsd. Extensive const in progress. Fld clsd to all acft at sunset. (10-5)

CALIFORNIA: LONG BEACH-RADIO: DME coverage 43 n mi as follows: 280°-305°, 5000'; 305°-340°, 7000'; 340°-040°, 12,000'; 040°-070°, 8000'; 070°-100°, 7000'; 100°-280°, 4000'

★LONG BEACH ARPT-TOWER: ILS glide slope subject to indef shutdown periods durg arpt const. (8-18) VHF/DF bearings unreliable below 12,000'MSL SW quad between 200° and 230° true. (5-6) July 30, trans & rcvr 123.8 mc decmsnd; trans & rcvr 120.5 mc cmsnd. VHF/DF rcvs 120.5 mc. (8-1) FLD: Several 230' MSL portable oil derricks NW, W, and S of fld. No fuel servicing avail. for civil acft 2400-0600. Neon apch lgt lane rnwy 30 discontinued indefinitely. (1-1) Caution - temp p-line with wooden poles 29' high serving const camp erected approx 315' S of and roughly parallel apch end rnwy 30 for 800'. (3-22) Rnwy 30 clsd all lndgs 0700-1500P week-days only due 100' booms in apch area. First 800' rnwy 30 and adj taxiways clsd const; 6200'avail lndgs and take-offs. Rnwy 12 clsd. Until further notice, straight-in ILS lndg min rnwy 30 daylgt hrs only - 500'/1 mi. (6-25)

LOS ANGELES-RADIO-SPECIAL NOTICE: Transcribed wea broadcasts shut down - modernization. Manual broadcast continues on VOR and both VOR & LF combined. (4-26)

LOS ANGELES-RADIO: VOR coverage 275°-315°, 30 n mi at min en route alt. Light to moderate scalloping below 3000' MSL. (10-23) About Aug 19, LF rng will be shut down until approx Aug 29 - conversion to H fac, with voice. Freq and ident remain the same. Voice controlled by ATCS. (7-19)

✱LOS ANGELES AIR ROUTE TRAFFIC CONTROL CENTER: Freq 118.9 mc changed to 119.9 mc. (8-2)

★LOS ANGELES INTERNATIONAL ARPT-TOWER: VHF/DF unreliable 045°-060° below 13,000' MSL beyond 30 n mi. (4-19) Aug 1, freq 119.9 mc changed to 118.9 mc. (8-2) FLD: Use paved areas only. New lgtd rnwy 16-34 approx 4000' W of Sepulveda Blvd clsd - avail 30-min req thru twr. Equip. crossing rnwy. Durg VFR wea conditions, civil acft ctc twr on 118.9 mc or listen 118.9 mc, trans 122.7 mc at least 10 mi out. Durg IFR wea, civil acft ctc Apch Ctl on 118.1 or 119.3, or listen 118.1 or 119.3 mc and trans 122.7 mc. USAF-NAVY-CG: VHF equipped acft ctc Apch Ctl on 118.1 or 119.3, or listen 118.1 or 119.3 mc and trans 122.7 mc. USAF-NAVY-CG: VHF equipped acft ctc Apch Ctl on 118.1 or 119.3 mc. UHF equipped acft ctc Apch Ctl on 250.2 or 269.0 mc. Pilots are urged to use extreme caution when operg off-shore W of arpt. All jet acft departing rnwys 25L-25R climbing in VFR conditions use a 200°departure corridor which originates at a max of 3000'MSL, approx intsxn of extended centerlines of above rnwys with the shoreline. Acft proceeding E-bound from Malibu or Pt. Dume intsxns in VFR conditions making a track which approx extended centerlines of above rnwys are cautioned not to descend below 4000'MSL until passing shoreline or Los Angeles Omni, unless cleared otherwise by ATC. Jet acft pat downwind leg is 1500'MSL. Acft not intending lndg at arpt should avoid apch areas to W of arpt and E of arpt between Downey rbn and arpt below 3000' in VFR wea. If desiring to cross apch area below 3000' ctc Los Angeles Apch Ctl before crossing. Recommended cross tfc plan crossing crs at 3000' or above ceiling permitting, directly over arpt or between LFR and arpt. Avoid shoreline W due hi-performance jet acft. Due non-visibility twr unable ctl tfc last 2400' rnwy 34. Nov 30, transmissometer cmsnd, furnishing rnwy visibility for rnwys 25L and 25R. Visibility to be added to observations when prevailing visibility is less than 1-1/2 mi. Hi-intensity apch lgts rnwy 25L converted to centerline system extending 3000' E of rnwy pavement. (6-21) Apch lgt lane sequenced flashers avail on test basis at pilot's request. Flashers extend from 1200' to 3000' from end rnwy 25L. (7-11)

LUCERNE VALLEY-DOUBLE J RCH ARPT: Length of strip reported increased to 3000'.

MENDOTA ARPT: New arpt reported: Lctd 1/4 mi E; elev 174'; 1 rnwy - (15-33) - 2300' x 90' (dirt & sand compact); remarks - 6' fence at each end. (7-23)

MOFFETT FIELD - SPECIAL NOTICE: Due to hvy jet tfc, acft operg vicinity Moffett Fld ctl zone in VFR wea exercise extreme caution passing thru ctl zone at alts below 2000' VFR and below 4000' during stratus conditions. (6-17)

MONTEREY-PENINSULA ARPT-RADIO: About Aug 7, ILS will be cmsnd. Lclzr freq: 110.1 mc, ident: MRY. Lctd 1000' SE on a centerline of NW/SE rnwy. Glide slope freq: 334.4 mc. Lctd 825' from apch end NW/SE rnwy and 236' N of centerline of rnwy. Glide angle 3.0°. Apch bear.: 84°. LMM freq: 260 kc, ident: RY. MM lctd 0.60 mi from apch end rnwy. LOM freq: 278 kc, ident: MR. OM lctd 5.14 mi from apch end rnwy. disregard spurious signals. (7-3)

OAKLAND-SPECIAL NOTICE: Pilots proposing transbay flight should ascertain that VFR wea exists within both San Francisco and Oakland Control Zones, or should obtain ATC clearance for flight within a ctl zone when wea is less than VFR, since ceiling and visibility mid-bay is frequently less than at the two terminals. Rotating beam ceilometer in operation. Hereafter ceiling obstructions of less than 1500' will usually pertain to the middle marker location. Tfc operg in VFR wea should avoid vcnty of Alameda NAS. Extensive tfc including jets operate in tfc pat up to 2000' within a radius of 1.7 n mi of fld. Exercise extreme CALIFORNIA: caution in these areas.

OAKLAND-RADIO-SPECIAL NOTICE: Military acft planning to use VHF communications and proposing IFR flight into Oakland, Alameda NAS or Hayward should ctc Oakland Apch Ctl on 118.1 mc, or proposing IFR flight into San Francisco should contact San Francisco Apch Ctl on 118.5 mc. Communications during IFR flight should not be conducted with Oakland Apch Ctl or San Francisco Apch Ctl utilizing the freq 126.18 mc unless 118.1 or 118.5 mc is not avail. Due to extreme congestion, 126.18 mc is not considered a suitable communications channel for IFR flight into Oakland, Alameda NAS, Hayward or San Francisco. (7-18)

OAKLAND-RADIO: VOR coverage 35 n mi N thru E at min instr alt. (1-14) DME coverage 30°-60°, 26 n mi at 5000'; 60°-80°, 35 n mi at 5000'; 280°-290°, 35 n mi at 4000'; 340°-350°, 35 n mi at 6000'; 350°-030°, 17 n mi at 4000'.

OAKLAND-AIR ROUTE TRAFFIC CONTROL CENTER-SPECIAL NOTICE: Jet approaches and lndgs at Oakland, San Francisco and Sacramento, as depicted on apch plates JAL-294-RNG, JAL-375-RNG and JAL-358-ADF, are to be used for emerg only. (4-24)

WISCONSIN: KENOSHA ARPT: Effective July 30, 1957, arpt will be perm clsd. (7-11)

LA CROSSE-RADIO: VOR radials 320°-335°, have course roughness beyond tolerance but flyable. (6-13)

LODI-LAKELAND ARPT: New arpt reported: Lat 43-19-40, long. 89-30-55; lctd 0.5 mi NE of Lodi; 1 strip - (E/W) 2640' x 200'; 87 oct gas; remarks - unattended. (1-14)

MADISON-TRUAX FLD: Caution crossing hwy lndg rnwys 22, 26, 31. E taxiway N of Admin Bldg perm closed to all acft over 10,000 lbs. Sod unsafe. About Aug 17, 253' (1238' MSL) lgtd twr will be erected 4 n mi NE (57°T) at lat 43-11-00, long. 89-15-13. (7-29)

MILWAUKEE-GENERAL MITCHELL FLD-TOWER: All acft apchg Milwaukee with intentions to land will, during VFR conditions and if equip. with multiple rdo freq, make the first contact with Milwaukee apch ctl on 124.9 mc. This contact should be made at or before reaching a point 15 mi from the arpt giving position and altitude. (5-10) VHF/DF coverage 3500' MSL at 40 mi at all azimuths. (6-7) FLD: Rnwy 7L-25R open days only. Obstn lgts on apch end of rnwy 13 are obscured by trees. Parking facilities lmtd-itinerant military acft on unofficial business may find parking facilities unavailable. Avoid confusing rnwy 1 with parallel taxiway to left. (8-15)

OSHKOSH-WINNEBAGO CO. ARPT: Caution - bldg const on fld - use rnwys only. Use only N/S and E/W rnwys during winter months. (2-21)

PHILLIPS ARPT: 100' unlgtd TV twr erected 900' W of S end of N/S rnwy. (6-26)

WATERTOWN ARPT: About Aug 16, 316' (1350' MSL) lgtd twr will be erected 4.8 n mi NNE (31°T) at lat 43-14-25, long. 88-39-49. (7-29)

WEST BEND-SKY RANCH ARPT: About Aug 15, 184' (1217' MSL) lgtd twr will be erected 3.2 n mi E (107° T) at lat 43-27-18, long. 88-15-06. (7-29)

WYOMING: CASPER-AIR TERMINAL-TOWER: ILS glide slope has moderate to severe path roughness 7300' and beyond 6 n mi. Not to be used for auto pilot apchs. FLD: Two 200' fences SW end of ramp not obstn lgtd. (11-16) Rnwy 3-21 extended 100' each end 150' wide. Extension not lgtd. 4 portal lgts each side each extension 1000' from rnwy ends. (8-1)

GILLETTE ARPT: 50'-75' W shoulder 1500' from N end N/S strip soft - clsd to hvy acft.

LARAMIE-RADIO: DME coverage 155°-225°, 35 n mi at 15,000'; 225°-300°, 26 n mi at 15,000'. July 15, VOR/DME shut down until approx Aug 12 - modernization. Durg this period the following arwys and intsxns are unusable: V4 LAR-DEN, V118 CYS-RKR, Carr and Nunn VHF Ints. V4 LAR-CKW usable utilizing LAR LFR; MEA 16,000'; Minimum crossing alt LAR W-bound 16,000'. V4N LAR-Gill Int. usable utilizing 116° mag bear. to LAR LFR; MEA 14,000'; Minimum Crossing Alt Gill Int. NW bound 14,000'. (7-15)

ROCK SPRINGS-RADIO: ILS glide slope has light to moderate roughness between OM and LFR.

SARATOGA-SHIVELY ARPT: Const in progress 1500' SW end NE/SW rnwy. - area mrkd by red flags. (7-5)

SHERIDAN-RADIO: VOR coverage lmtd to approx 35 n mi between 150° and 280°. Moderare course roughness exists in mountainous area.

THERMOPOLIS ARPT: Caution - 1800' S end N/S rnwy clsd - cnnst; only 3300' avail.

TORRINGTON ARPT: Oil well storage tanks lctd on S edge E/W rnwy 300' from W end. Oil well pumping unit lctd on E side NE/SW rnwy 300' from SW end of rnwy. Low flying dusting and spraying type acft operg from arpt thru Sept. 30. (4-11)

PUERTO RICO: SAN JUAN-ISLA GRANDE ARPT: First 500' W end rnwy 9R-27L unusable. Daylgt operns proceed with caution - ngt operns observe threshold lgts. Use outside taxiway in front of large hangar near entrance. Equip. on hangar ramp. (4-12)

SAN JUAN-PUERTO RICO INTNL ARPT: Parking circles 2, 3, 4 and 5 on N departure ramp not fully visible from twr - caution. (6-7) Lgtd temp steel twr, 110' MSL, lctd approx 3500' off N boundary rnwy 7-25. (5-20)

ATTENTION PILOTS! OBSTRUCTION LIST CHANGE: Effective with this issue the Obstruction List has been changed to include a new column tying in the obstruction with the appropriate Coast and Geodetic Survey Sectional Chart. The list appears on page 27.

Attention, Pilots!

CHECK YOUR AERONAUTICAL CHARTS AND MAKE SURE THAT EACH OF THE OBSTRUCTIONS LISTED BELOW IS CARRIED!
IF ANY ARE MISSING, INSERT THEM NOW, DON'T DELAY! ONLY YOU CAN MARK YOUR CHARTS: IT IS YOUR RESPONSIBILITY!

This list covers recent obstructions (television towers, smoke stacks, etc) which are 500 feet or more above the ground. It will be carried in the Airman's Guide at frequent intervals. When the list does not appear in the Guide, all new obstructions will be carried as two-starred items in the NOTAMS. The list will be brought up to date each time it is issued; newly added or changed material will be indicated by arrows.

The Coast and Geodetic Survey sectional charts show all known dangerous obstructions at the time a particular chart is issued. As these charts are published at intervals of six months to a year, dangerous obstructions built during the interim between issues must be placed on the charts by the user. The position, height and top elevation above MSL of these new obstructions can be taken from the list given below. New obstructions will be carried in this list until six months after the issuance of the sectional charts depicting the obstruction data and then deleted.

VOR RECEIVER CHECK SIGNALS

Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operations of the airborne system. These provisions consist of three different methods:(a) a radiated test signal consisting of a signal radial; (b) certified check points on the airport surface; or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. With the flight path deviation indicator(FPDI) centered, the omnibearing selector should read 0° with the to-from indication being "From"; or the omnibearing selector should read 180° with the to-from indication reading "To". Should the VOR receiver be of the automatic indicating type the indication should be 180°. (This is true for all airborne receivers except Mitchell which will indicate 0°). Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of 4° be indicated through use of the ground check or +6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. CAUTION, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of this date check points or facilities have been established at the following airports (listed under city name).

RADIATED TEST SIGNAL

*New York (LaGuardia 108.6 mc)
*Chicago (Midway 111.0 mc)
*Kansas City (Municipal 113.0 mc)
**Atlanta (Municipal 112.0 mc)
**Miami (International 112.0 mc)
**Wichita (Municipal 111.0 mc)
*Los Angeles(International 111.0mc)

NOTES: *Continuous monitoring
**Checked daily for accuracy

REVISIONS TO STANDARD INSTRUMENT APPROACH PROCEDURES

Bearings, headings, courses & radials are magnetic. Elevations & altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.

CORRECTIONS

AUSTIN, TEXAS - MUELLER ARPT: Procedure No. ILS-12, Amdt. 3, Effect. 29 Aug. 57: Change Procedure Number to read: "ILS-12R" in lieu of "ILS-12".

STANDARD INSTRUMENT APPROACH PROCEDURE—TYPE RADAR

If a radar instrument approach is conducted at the below named airport, it shall be in accordance with the following instrument procedure, unless an approach is conducted in accordance with a different procedure authorized for such airport by the Administrator of Civil Aeronautics. Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the radar controller. From initial contact with radar to final authorized landing minimums, the instructions of the radar controller are mandatory except when (A) visual contact is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach. Except when the radar controller may direct otherwise prior to final approach, a missed approach shall be executed as provided below when (A) communication on final approach is lost for more than 5 seconds during a precision approach, or for more than 30 seconds during a surveillance approach; (B) directed by radar controller; (C) visual contact is not established upon descent to authorized landing minimums; or (D) if landing is not accomplished.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

AIR NAVIGATION RADIO AIDS

ATCS = Air Traffic Communications Station (CAA)

VHF OMNI-RANGE: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated ATCS. (C) The station identification is monitored continuously by the communicator at the associated ATCS. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated ATCS. Category I VOR = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category I are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored soley through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an ATCS, and located too distant from ATCS to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180", indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility. (S) = State facility.
(g) = Twr equipped with 121.9 mc or (g.7)= Twr equipped with 121.7 mc for ctl of gnd traffic.
(0700-2300) = Hours of operation local time.
(3) = Monitoring category
(B) = Blue Hemisphere. (Y) = Yellow Hemisphere
→ New or revised data
• = Automatic voice identification
■ Information deleted.

RADIO CLASS DESIGNATIONS

AC. . . . . Approach Control Tower, CAA (transmits on voice channel of associated ranges and ILS in addition to frequencies listed)
ARSR. . . . Air Route Surveillance Radar
B. . . . . Scheduled Broadcast Station (broadcasts weather at 15 and 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . . Control Tower, CAA
CI. . . . . Control Tower, (City, County, Private, etc.)
D. . . . . Distantly controlled
DME. . . . . Distance Measuring Equipment
FM. . . . . VHF fan marker (100 watts)
GCA. . . . Ground Controlled approach system
H. . . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . . . Instrument Landing System (voice on localizer channel)
J. . . . . L MF (200-415 kc) voice facility on other than range frequency
LFM. . . . VHF fan marker, low powered (5 watts)
LMM. . . . Compass locator station when installed at middle marker site
LOM. . . . Compass locator when installed at outer marker site
LVOR. . . Low power VOR (with standby equipment)
MH. . . . . Non-directional radio beacon (homing) power less than 50 watts
ML. . . . . Range (loop radiators), power less than 50 watts
MM. . . . VHF middle marker
MOR. . . . Low frequency omni-directional range
MRA. . . . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . . . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . . VHF outer marker
P. . . . . Point-to-Point radio
RA. . . . . Range (adcock, vertical radiators), power 150 watts or more
→ RAPCON Radar Approach Control.
RL. . . . . Range (loop radiators), power 150 watts or more
S. . . . . Simultaneous range, homing signals and voice.
T. . . . . Teletype
TVOR. . . . Low power VOR (no standby equipment) located on airport
TX. . . . . Principal teletype
V. . . . . Additional VHF voice feature on other than range frequency
VAR. . . . Visual-aural VHF range
VOR. . . . VHF omni-directional range (omni-range)
W. . . . . Without voice facilities on range frequency
Z. . . . . VHF station location marker at a range station

NOTES

1. Range courses are magnetic in-bearings
2. All CAA MH facilities operate continuously unless cited as follows: (on req)
3. All CAA ranges operate continuously. Those which are not manned continuously are cited in the remarks column with hours of operation in parentheses, e.g., (0600-2400)
4. VHF and LF/LMF ranges listed with the same identifier are controlled by the same ATCS. Due to space limitations the DTV and communication frequencies which are listed with the LF/LMF facility are not repeated with the VOR facility

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

RADAR AVAILABLE: How and Where

(20 August 1957)

PAR = Precision Approach Radar. ASR = Airport Surveillance Radar. GCA = Ground Controlled Approach (Military Equivalent of Combined ASR and PAR Equipment). ARSR = Air Route Surveillance Radar. RAPCON = Radar Approach Control.

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance.

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or ASR APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for a surveillance approach are usually higher than for a precision approach.

RADAR ARRIVAL AND DEPARTURE CONTROL - Radar is utilized by certain radar equipped facilities to control the flight paths of arriving or departing IFR aircraft for the purpose of expediting the flow of traffic. Aircraft operating on IFR flight plans will be afforded a minimum of three miles horizontal separation unless standard non-radar vertical, lateral or longitudinal separation exists. This should not be confused with Ground Controlled Approach (GCA) which is an instrument approach aid.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Airman's Guide.

RAPCON - At certain locations, the surveillance portion of Military RAPCONS is operated by the CAA and service is available to all aircraft. These are listed below.

RADAR BEACONS - Military type radar beacon ground equipment of the IFF Mark X type is being made available for operation at all CAA operated RAPCON facilities and some air route surveillance radar facilities. This system is available only for operation with military aircraft and should not be confused with the air traffic control radar beacon system (ATCRBS) now under development. See "Remarks" column of Radar Approach Control (RAPCON), page 4. For ATCRBS see note page 4.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.
Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.
Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.
Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions for aircraft to make 360 degree turns for identification. In either case, instructions will be followed at the pilot's discretion. After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible. Civil Minimums at military installations established by the CAA are 400' ceiling and 1 statute mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums. Navy units are prepared to transmit on HF from 2,000 to 18,000 kc and receive any frequency from 1,500 to 9,050 kc to aid any plane in emergency.

RADAR WEATHER ADVISORY SERVICE: See Page 4.

CAA OPERATED RADAR UNITS

NOTE: Transmitting frequencies below 118 mc are not guarded. Other transmitting frequencies listed are guarded plus 3023.5kc; 122.5 mc, unless 122.7 mc is shown under Remarks. Transmit and guard 121.5 mc all locations.

RADAR WEATHER ADVISORY SERVICE - continued from page 3.

RADAR WEATHER ADVISORY SERVICE: Pilots may be aided in avoiding hazardous weather by obtaining Radar Advisory Service from radar facilities of the Air Defense Command through use of the following procedures:

1. Using the frequency 133.2 mc. (or 121.5 mc if 133.2 mc not available) transmit:
"STARGAZER THIS IS (aircraft identification), POSITION (_____), HEADING (_____), IFR (or) VFR FLIGHT PLAN, OVER"
The word "STARGAZER" is a special call sign which automatically indicates a request for radar advisory service. After contact is established the pilot will use the call sign of the radar station which responds.
(a) If the aircraft has dual radio installation the pilot on an IFR flight plan should maintain a guard on the normal ATC frequency while in contact with the radar facility.
(b) If the aircraft does not have dual radio installation the pilot on an IFR flight plan shall, prior to leaving the normal ATC frequency, advise the ARTC Center (direct or via appropriate communication station), "CHANGING TO RADAR ADVISORY SERVICE".

2. The radar director will answer the "STARGAZER" call:
"(aircraft identification) THIS IS (name of radar site), (instructions)"
The instructions will normally consist of one of the following:
(a) "UNABLE" (This is a procedural word used by ADC radar facilities when radar advisory service cannot be furnished for any reason. Upon receipt the pilot shall terminate the contact immediately and return to the normal enroute frequency.)
(b) General information concerning the storm area and, if appropriate, "STANDBY FOR ATC CLEARANCE". (This instruction is for pilots on IFR flight plans only. It signifies that the radar director will obtain approval from the ARTC Center for the new flight path before giving vectors. The pilot shall standby on the radar advisory frequency).
(c) General information concerning storm area and a suggested flight path or specific vectors to avoid the storm. (This is for pilots on VFR flight plans. Pilot may take action at his own discretion).
(d) "UNABLE - SUGGEST YOU CONTACT (call sign of adjacent ADC radar)". (The radar director will make this statement if he determines from observation of the aircraft's position on his radar that another radar site can better serve the pilot's needs).
(e) "NO CIRCUITS FOR ATC CLEARANCE, OBTAIN YOUR OWN CLEARANCE - SUGGESTED FLIGHT PATH IS....." (This signifies that the radar site does not have a communication circuit with the ARTC Center and, therefore, the pilot must obtain his own ATC clearance if a deviation from current clearance is indicated by the suggested flight path).

3. The pilot shall immediately return to the normal enroute frequency when:
(a) radio contact with the director is lost.
(b) notified by the radar director that radar contact has been lost.
(c) the advisory service is completed.

4. In all cases the information furnished by the radar facility is advisory in nature and the responsibility for safe operation of the aircraft rests with the pilot.

RADAR BEACONS - (continued from page 3)

ATCRBS - Air traffic control radar beacon transponders (ATC transponders) are being installed in some civil aircraft to participate in the forth-coming in-service evaluation of this beacon system. Since the ATC transponder can be used with Mode 3 of the IFF Mark X system, the following will govern the operation of the ATC transponder in order to reduce interference and clutter on IFF Mark X radar displays.

1. Within the environment test area designated within a 200-mile radius of the following locations, the ATC transponder will be operated in accordance with the request of air traffic control. Ground equipment installations will start approximately October 1, 1957, at the following locations: New York center; Idlewild, La Guardia and Newark towers. Installation at the Washington center and tower, the Chicago center and O'Hare tower and the Norfolk center will follow as soon as equipment becomes available. Notification of the start of the actual evaluation will be made at a later date.

2. Air traffic control transponders will be adjusted to Code 00 and turned on only in aircraft operating on an IFR flight plan unless otherwise requested by any ground station.

3. When filing a domestic IFR flight plan for an aircraft equipped with a functioning ATC transponder, this shall be made known by adding the word "transponder" immediately following the aircraft identification. Example: "Braniff six transponder".

4. Aircraft using the "Stargazer" service offered by the Air Defense Command will advise the radar operator of the status of the ATC transponder and will operate it in accordance with the operator's request regardless of the type of flight being conducted.

5. Aircraft operating from the domestic area will comply with (3) above. Aircraft entering the domestic control area will only advise oceanic air traffic control of the status of the Air Traffic Control transponder when making the first radio report to the United States oceanic air traffic control center.

NOTE: FIRST FREQUENCY LISTED IS THE NAVIGATIONAL AID CHANNEL; OTHERS ARE COMMUNICATIONS CHANNELS.

NOTICES TO AIRMEN

SPECIAL NOTICES

✓ Indicates new or revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a Notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the General Services Office, Attention: W-120 (formerly W-52), CAA, Washington 25, D. C.)

Permanent airport data changes should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide

---

HOW TO USE THE AIRMAN'S GUIDE: The Airman's Guide is issued every two weeks. Every issue contains a Notices to Airmen section; every other issue additionally contains a Radio Facility Data section; and once each quarter the Directory of Airports appears in an issue containing both of these sections.

CONTENTS: The contents of each issue are noted on the front cover. The first page of each section carries the Legend for interpreting codified information. Material normally included in each section is as follows:

(1) Notices to Airmen: Gives current condition of facilities and any special flight regulations or restrictions; cites data changes which serve to correct less frequently issued publications or charts; included as Special Notices are amendments to restricted areas, location identifiers, minimum en route IFR altitudes, civil airways, control areas, control zones, reporting points, VOR check points, standard instrument approach procedures, etc.

(2) Radio Facility Data: Lists radar facilities, instrument landing systems, and all other aeronautical radio facilities with their transmitting and guarded frequencies, identification, station class, range courses and remarks.

(3) Directory of Airports: This codified directory covers airport type, class, elevation, runway length and number, lights, servicing, obstructions, fuel octanes, weather reports available, unicom available, and remarks.

SPECIAL NOTICES: Special Notices usually appear at the beginning of the Notices to Airmen section. Special Notices are frequently indicated on the front cover, giving the subject and page number where the information is found.

CIVIL USE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission.

In the case of Air Force Bases, pilots must have on file with Headquarters USAF a "HOLD HARMLESS" AF form 180 and in their possession a properly signed and executed AF form 181 permit. Application for these forms may be made to: Assistant Chief of Staff, Installations, HQ, USAF, Washington 25, D. C. This regulation will be strictly enforced.

For Naval Installations, prior permission should be requested from the Chief of Naval Operations (OP 532) via the Commanding Office of the field concerned, (who has the authority to approve landing rights for certain categories of civil aircraft). However, with minor exceptions, authority to use Navy field is granted only to aircraft on government business, or when no suitable civil airport is available in the vicinity.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

FLIGHT PLANS: Pilots are urged to file VFR flight plans in person or by telephone prior to departure. Radio should be used for filing flight plans only when it is impossible to file in person or by telephone. This procedure is necessary in order to avoid congestion on the already busy air-ground communications channels. These channels should be reserved for essential in-flight communications. All pilots will benefit by following this practice.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical locations. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations).

Omniranges where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification:

e.g. Long Beach omnirange (Voice) .-.. --- -.-. . (LGB in Code)

For omniranges, as shown above, normal voice identification consists of the name of the omni followed by the word "omni". However, if the omni is unattended, i.e. if no facility for providing air-ground communications services is associated with the omni the word "unattended" will precede the word "omni". Example: AIRVILLE UNATTENDED OMNI.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciable higher rate of speed than the location identifier.

INTERFERENCE ON ATCS COMMUNICATIONS CHANNELS: If excessive interference is noted on ATCS VHF or UHF simplex frequencies, pilots should request the ATCS to reply on the VOR voice channel. (Reference to the Air Navigation Radio Aids Section will indicate which VORs have a voice channel). This will often expedite the exchange of messages as the VOR has a clear channel for communications.

NEW UNICOM FREQUENCY: Frequency 123.0 mc has been designated for UNICOM by the Federal Communications Commission where an airport is served by a control station. Where there is no control tower or communications station, 122.8 mc is the frequency designated for use. Also 122.8 mc may be used by acft in civil defense work. These frequencies shall not be used for air traffic control purposes and only one UNICOM will be authorized at each landing facility.

RUNWAY VISUAL RANGE REPORTS AT NEWARK, N. J.: Effective March 3, 1956, measurements of runway visibility for Runway 4 at Newark, New Jersey, will be in terms of Runway Visual Range which is the distance high intensity runway lights can be seen by an observer located at the runway threshold viewing the lights in the same direction as a pilot making an approach.

The ILS and PAR instrument approach procedures for Newark have been amended to authorize 2600' of runway visual range as an additional operating minimum for straight-in approaches to Runway 4. When measurements of Runway Visual Range are being taken, the tower will give pilots intending to land straight-in on runway 4, the reported Runway Visual Range. When the meteorological ceiling and visibility (contained in "main body" of sequence report which is the average weather for the airport proper) are reported below minimums, (e.g. 200, 5), an approach may be conducted to Runway 4 provided Runway Visual Range is reported at or above 2600'. The "remarks" portion of the hourly weather sequence for Newark will report Runway Visual Range in hundreds of feet, and runway visibility will no longer be reported in miles and fraction.

Since Runway Visual Range recognizes the additional penetration provided by high intensity runway lights and is measured in terms of what a pilot actually sees, pilots will have better assurance of finding runway conditions substantially as reported when arriving over the threshold.

The Runway Visual Range minimum of 2600' is also based on the penetration ability of the approach lighting system installed at Newark which is designed to assure earlier transition from instrument to visual flight.

GLIDE SLOPE FLARE: Modification of null reference glide slope facilities will result in glide slope flare at about thirty (30) feet above runway. Caution advised on automatic approaches continued past runway threshold.

POSITION REPORTING PROCEDURE FOR IFR FLIGHTS OPERATING AT LEAST 1000 FEET ON TOP: Effective September 15, 1956, IFR flights cleared by ATC to operate at least 1000 feet on top shall conform to the following position reporting procedures:

1. Flights along airways. Regardless of the altitude being flown, pilots shall report only over those fixes that are designated as compulsory reporting points for all altitudes. ATC may specify additional reports as required.
2. Flights operating on a direct route. Regardless of the altitude being flown, pilots shall report over each reporting point specified in the flight plan (approximately 200 miles apart) and over each fix along the route designated as a compulsory reporting point for all altitudes. ATC may specify additional reports as required.

Pilots filing direct route flight plans requesting an altitude of a least 1000 feet on top should designate the route flight by appropriate fixes approximately 200 miles apart over which they plan to report.

IFR RATE OF CLIMB OR DESCENT: In the interest of standardizing operating procedures for IFR flight and to provide greater utilization of available airspace, pilots are requested to adhere to the following procedure when cleared by air traffic control to climb or descend in excess of 1000 feet to an approved altitude:

1. Unless cleared otherwise by air traffic control, climb as rapidly as practicable to 1000 feet below the assigned altitude and then not to exceed 500 feet per minute until the assigned altitude is reached.
2. Unless cleared otherwise by air traffic control, descend as rapidly as practicable to 1000 feet above the assigned altitude and then not to exceed 500 feet per minute until the assigned altitude is reached.

ATC DEPARTURE CLEARANCES: Effective November 1, 1956, air traffic controllers will discontinue issuing departure clearances specifying that any portion of the departures shall be conducted in "VFR conditions" unless provision of positive separation will result in an excessive departure delay and the pilot indicates that he will accept a VFR restriction. To reduce communications and expedite departures wherever possible, pilots should include in their requests for departure clearances a statement that they will accept a VFR restriction either during climb to cruising altitude or to a specified altitude.

INABILITY TO COMPLY WITH ATC CLEARANCES: The pilot should always advise air traffic control when his aircraft is not equipped or its performance is insufficient to comply with an issued air traffic control clearance. A brief reason such as "unable account loads" or "unable transmit 3023.5" may be included if considered necessary for clarification. The pilot may then expect an amended air traffic control clearance.

TWO-WAY RADIO FAILURE: Under CAR 60.49 Radio Failure, pilots of IFR flights experiencing two-way radio failure are expected to adhere to the procedures prescribed on page 63 of the current Flight Information Manual under "Two-way Radio Failure," and "En Route Procedures."

However, if a pilot should become lost, or if other factors prevent the pilot from being able to comply with the provisions described on page 63, such pilots, as well as pilots of VFR flights, in the exercise of their emergency authority under CAR 60.2, may elect to attempt to alert civil or military radar systems by flying the appropriate pattern as described on page 49 of the current Flight Information Manual.

INTERFERENCE WITH SEARCH AND RESCUE OPERATIONS: Information received from air rescue units presents evidence that civilian pilots are interfering and, in some cases, jeopardizing aircraft engaged in rescue operations. Most of the instances are caused by pilots on sightseeing flights in the immediate area of an accident. Accordingly, the CAA Office of Flight Operations and Airworthiness strongly urges that pilots who are not engaged in the search and rescue operation refrain from conducting sightseeing flights at the scene of an accident while the rescue operations are being conducted.

FLIGHT OPERATION WITHIN DESIGNATED CONTROL ZONES: There have been an increasing number of incident reports filed in recent months by air traffic control facilities, related to aircraft landing at airports located within control zones, without a traffic control clearance when weather conditions are reported below VFR minimums. Designated control zones are shown on aeronautical charts and are indicated by broken-line circles or other shapes showing exact zone dimensions around certain airports.

Civil Air Regulations, Part 60, paragraphs .30 and .31, state that no aircraft may be flown in a control zone less than 500 feet vertically under, 1000 feet vertically over, or 2000 feet horizontally from any cloud formation, or beneath the ceiling when it is less than 1000 feet, unless authorized to do so by air traffic control.

CAR, Part 60, also requires a pilot to obtain a clearance under the following conditions:

1. When the ground visibility is less than 3 miles, no person shall take off or land at an airport within a control zone or enter the traffic pattern of such an airport.
2. When flight visibility is less than 3 miles within a designated control zone.

Air traffic clearances to conduct any operation within a control zone below basic VFR minimum weather conditions should be requested through the nearest available air traffic communications station, tower or center.

VOR AUTOMATIC REBROADCAST SYSTEM - MARFA, TEXAS: The Marfa, Texas VOR Automatic Rebroadcast system was commissioned January 24, 1957, receiving on frequencies 122.1, 126.7, 135.9, 255.4 and transmitting on voice channel of Marfa VOR 115.9 Mc.

The Marfa VOR does not have an associated ATCS or control tower and the purpose of the Automatic Rebroadcast System is to provide a means whereby aircraft in the area can exchange pertinent information and work out their own landing sequence or other traffic separation problems. Pilots operating in the Marfa area should guard the Marfa VOR for information broadcast from other aircraft. When approaching or departing Marfa, an abreviated flight plan should be transmitted "blind" for rebroadcast by the VOR.

The Automatic Rebroadcast System consists of receivers tuned to 122.1, 126.7, 135.9, and 255.4 Mc so interconnected that aircraft transmissions on these frequencies are broadcast automatically on the VOR voice channel. To prevent broadcast of more than one signal at a time, the first receiver energized by an aircraft transmission locks out the other receivers until the aircraft transmission is ended. To inform the pilot that his transmission was received and broadcast, the system automatically transmits a three-second 400-cycle acknowledgement tone signal at the end of each VOR transmission.

This is a trial installation and comments are solicited from all users. Mail to: Civil Aeronautics Administration, Attention - W-522, Washington 25, D. C.

✓NEW YORK ARTC CENTER PREFERENTIAL ROUTES: The preferential routings for outbound IFR flights from the New York metropolitan area are published in graphic form on page 58. These routes should be selected in filing IFR flight plans from the New York area to and beyond the points shown. This procedure will increase the efficiency of ATC services and should be of considerable assistance to the pilots. This is an experimental project; therefore, your comments will be appreciated. Please address your recommendations to the Office of Air Traffic Control, Civil Aeronautics Administration, Washington 25, D. C.

SIMULTANEOUS VOICE TRANSMISSIONS FROM A SINGLE LOCATION: At several CAA facilities, simultaneous voice transmissions are made from a single location. For example, the New York ATCS controls the transmitters at Idlewild, LaGuardia, Newark, Colts Neck, Caldwell and Wilton L/MF or VOR facilities.

To provide a uniformly brief announcement, generally for broadcast purposes, the name of the controlling facility, followed by the word AREA will be used, e.g., THIS IS NEW YORK AREA RADIO, etc.

Calls from aircraft will be answered using the name of the station as stated by the pilot, e.g., a pilot calling "Newark Radio" will be answered by the New York ATCS, "THIS IS NEWARK RADIO, etc."

The word "AREA" signifies that the transmission from the named (controlling) location is emanating simultaneously from one or more remotely controlled facilities, having a different name or names, as indicated in the ANRA Section of the AIRGI and/or applicable RF Charts.

A NOTAM will be issued from those facilities affected by the foregoing when the change to this procedure is made.

IN-FLIGHT WEATHER SAFETY SERVICE (Operational Test): Effective March 5, the U. S. Weather Bureau, in cooperation with CAA, has introduced on an operational test basis an In-Flight Weather Safety Service aimed specifically at serving airmen in flight. Special advices, identified as FLASH ADVISORIES, will be broadcast to provide airmen in flight with up to two hours advance notice on the development of areas of potentially hazardous flying weather and the trends for an additional several hours. The advices will deal with potentially hazardous weather such as tornadoes, hail, severe thunderstorm systems (excluding small, isolated thunderstorms), duststorms, icing and major turbulence conditions. Also included will be information on extensive areas of low ceiling and visibility, and strong surface winds.

Currently valid FLASH ADVISORIES will be included in the scheduled weather broadcast of CAA stations within 200 miles of the affected area. Additionally, FLASH ADVISORIES will be given to pilots contacting the stations by radio, as appropriate.

FLASH ADVISORIES will be issued by Weather Bureau FAWS centers for the respective areas of responsibility. (These areas coincide closely with the Air Route Traffic Control Areas shown on the USC&GS Civil Airways and Mileage Charts.) For ready identification by the pilot, FLASH ADVISORIES issued by FAWS Center will be numbered (or lettered) consecutively beginning at midnight of each day.

In-flight weather reports from pilots, particularly reports on indications of developing potentially hazardous weather, will be important to the success of the program and such in-flight reports are earnestly solicited.

Comments and suggestions concerning the FLASH ADVISORIES should be sent to Chief, U. S. Weather Bureau, Washington 25, D. C., Attention: 0-5.31.

WEATHER COLLECTION TIME CHANGE: Effective June 1, 1957, the starting time for hourly sequence collections of aviation weather reports on Service A teletypewriter circuits was changed from 30 minutes past the hour to the hour. Pilots should take full cognizance of this change when checking the latest weather before or in flight. Also, pilots should try to avoid telephoning Weather Bureau or CAA stations for weather information between 45 minutes after the hour and the hour because at this time the stations are routinely occupied with observing the weather.

RADIO INTERFERENCE (General): You can do your part toward reducing radio interference to aeronautical services from non-aeronautical sources which may be noted during flight if such is reported promptly to a CAA facility (preferably after landing) or to any FCC field office. Reports should state the frequency or channel affected, description of the interference, and the geographical area where the interference was observed. If known, reports should give the apparent cause of the interference such as radio stations, call letters when such can be identified, industrial plants, diathermy machines, power lines, television receivers, etc. Do not report interference caused by normal frequency congestion, i.e., signals from other aircraft using the frequency."

IDENTIFICATION OF AIRCRAFT: Pilots are requested to exercise care that the identification of their aircraft is clearly transmitted in each contact with an ATC facility. Also, pilots should be certain that their aircraft are clearly identified in ATC transmissions before taking action on an ATC clearance. Garbled aircraft identifications in radiotelephone transmissions should never be taken for granted but should always be checked.

NOTIFICATION OF NON-COMPLIANCE BY MILITARY AIRCRAFT: The 323rd Fighter-Bomber Wing, Bunker Hill AFB, Indiana is performing low altitude navigational training flights at two hundred feet for the purpose of pilot proficiency under the authority of Section 60.1(a) of the Civil Air Regulations. Route of flight: Bunker Hill AFB, Indiana heading 261° to Loda, Illinois; 280° to Lake Bloomington, Illinois; 059° to a point at latitude 40-55, longitude 88-24; 088° to latitude 40-53, longitude 86-53 (approximately 2 nautical mi North of Monon, Indiana); 112° climbing to traffic altitude to Bunker Hill AFB, Indiana, point of beginning.

The Army Aviation Training Detachment, Edward Gary Army Air Force Base, San Marcos, Texas, is conducting aerobatic training on civil airways V222 and V198 under authority of Part 60.1(a) of the Civil Air Regulations. The training activity is being conducted below 5000 feet MSL in VFR conditions between Smithville intersection and San Antonio VOR on V222, and between Eagle Lake and San Antonio VOR's on V198. Flights operating between those points on V222 and V198 at less than 5000 feet MSL should do so with extreme caution.

ATC PROCEDURES - RADAR TRAFFIC CONTROL: On page 67 of FIM, Volume 10, dated June 15, 1956, insert preceding the last sentence of the first paragraph:

"Therefore, aircraft must not deviate from headings issued by approach control and must not deviate from the normal final approach course unless a clearance to do so is received from air traffic control. After passing the approach fix (outermarker, radio range, etc.) on final approach, aircraft are expected to proceed straight to the airport and complete the apch or effect the missed approach procedure set forth for that airport".

And following the first sentence of the second paragraph, insert:

"Whenever the proposed routing beyond the short-range clearance limit differs from that filed in the original flight plan, the amended routing will be specified, in the short-range clearance issued to the pilot before takeoff. If a loss of two-way communications occurs, the pilot will be expected to follow the amended routing to filed flight plan route and/or destination. (Note: This procedure is also applicable when nonradar short-range clearance is issued)."

WASHINGTON, D. C. HIGH DENSITY AIR TRAFFIC ZONE: Effective April 15, 1957, all the airspace within the current boundaries of the Washington Control Zone extending upwards from the surface to and including an altitude of 3000 feet above the surface is designated as a High Density Traffic Zone, and the Washington National Airport is designated as a High Density Airport. Radio communication must be made with Washington National Airport control tower before commencing a take-off or landing at or entering, the traffic pattern of Washington National Airport, unless prior authorization from the Washington National Airport traffic control tower has been received by aircraft not equipped with functioning two-way radio.

Maximum speed within the zone is 180 mph or 160 knots indicated airspeed unless operational limitations for a particular aircraft require greater airspeeds, in which case the aircraft shall not be flown in excess of the minimum speed consistent with the safe operational limitations of the aircraft.

Pilots should use every effort to maintain a continuous listening watch while within the zone so as to receive any pertinent air traffic information which may be transmitted and thus be alerted to avoid collision hazard within zone.

NEWARK CEILING-VISIBILITY EVALUATION PROGRAM: This program, being conducted at Newark Airport by the U.S. Weather Bureau, changed from furnishing threshold contact height estimates to APPROACH LIGHT CONTACT HEIGHT estimates on May 1, 1957. These estimates will be given out only by the CAA local controller on 118.3 mc at the time each pilot reaches the outer marker inbound for a straight-in ILS approach to rnwy 4. Evaluation of the accuracy and usefulness of these estimates is based solely on the report given by the pilot. Therefore it is important for the report "APPROACH LIGHTS" to be given on 118.3 mc the instant the approach lights are sighted. All pilots are urged to visit the project building adjacent to the control tower or telephone the project personnel at MItchell 2-4414 and give their opinion as to whether the approach light contact heights are of more value than the threshold contact lights.

AIRMAN'S GUIDE PRICE CHANGE: Effective July 1, the annual subscription to the Airman's Guide is being reduced to $2.25 domestic ($3.25 foreign). The Flight Information Manual, which was formerly included in the subscription price to the Guide, is NOT included in the new price. However, all subscribers to the Guide will receive written notice from the Superintendent of Documents when the Manual is issued, giving the price and how it may be purchased. The Manual cost is expected to be approximately $0.50, so that the overall cost of Guide and Manual will remain about the same. The separation of the Guide and Manual is for bookkeeping purposes only; the Guide will continue to supplement the Manual as in the past.

(20 August 1957)

CIVIL AIRWAY, CONTROL AREA, CONTROL AREA EXTENSION, CONTROL ZONE AND REPORTING POINT AMENDMENTS: Effective September 26, 1957, unless otherwise advised the following civil airways, control areas, control area extensions, control zones and reporting points are amended in whole or in part as follows:

CIVIL AIRWAYS:

(1) Green civil airway No. 5 (Los Angeles, Calif., to Boston, Mass.) is amended by changing all after Millville, N. J., rdo rng stn to read: "Millville, N. J., rdo rng stn; Beachwood, N. J. nondirectional rdo bcn; the intsxn of the SE crs of the Newark, N. J., rdo rng and the SW crs of the Peconic, L. I., N. Y., rdo rng; Peconic, L. I., N. Y., rdo rng stn; the intsxn of the NE crs of the Peconic, L. I., N. Y., rdo rng and the SE crs of the Hartford, Conn., rdo rng to the Boston, Mass., rdo rng stn." (Note: Per ASP Mtg 489 Beachwood H to be at approx lat 39-58-10, long. 74-08-42. Intsxn of the SE Newark and SW Peconic named Woolf Int - on request. Salem Int redesignated as NE Peconic and SE Hartford - becomes on request)

(2) Amber civil airway No. 6 (Jacksonville, Fla., to United States-Canadian Border) is amended by deleting the portion which reads: "From the Columbus, Ohio, rdo rng stn to the intsxn of the NE crs of the Columbus, Ohio, rdo rng and the W crs of the Cleveland, Ohio, rdo rng."

(3) Red civil airway No. 8 (Dayton, Ohio, to Newark, N. J.) is amended to read: "From the intsxn of the W crs of the Wright-Patterson AFB rdo rng and the NW crs of the Cincinnati, Ohio, rdo rng via the Wright-Patterson AFB, Dayton, Ohio, rdo rng stn to the intsxn of the E crs of the Wright-Patterson AFB rdo rng and the S crs of the Columbus, Ohio, rdo rng. From the Butler, Pa., nondirectional rdo bcn via the Brookville, Pa., nondirectional rdo bcn; the intsxn of the SW crs of the Elmira, N. Y., rdo rng and the W crs of the Williamsport, Pa., rdo rng; Williamsport, Pa., rdo rng stn; Crystal Lake, Pa., nondirectional rdo bcn to the Newark, N. J., rdo rng stn." (Note: Deleted portion Red 8 between Lockbourne Int and Butler H.)

(4) Red civil airway No. 13 (Wheeling, W. Va., to Boston, Mass.) is amended by changing the portion which reads: "From the Wilkes-Barre, Pa., rdo rng stn via the Stewart AFB, N. Y., nondirectional rdo bcn; Poughkeepsie, N. Y., rdo rng stn;" to read: "From the Crystal Lake, Pa., nondirectional rdo bcn via the Stewart AFB, N. Y., nondirectional rdo bcn; Poughkeepsie, N. Y., rdo rng stn;"

(5) Red civil airway No. 17 (St. Louis, Mo., to Baltimore, Md.) is amended by deleting the portion which reads: "From the McKeesport, Pa., nondirectional rdo bcn to the Johnstown, Pa., nondirectional rdo bcn."

(6) Red civil airway No. 23 (United States-Canadian Border to New York, N. Y.) is amended by changing the last portion to read: "New York (LaGuardia), N. Y. rdo rng stn to the intsxn of the E crs of the New York (LaGuardia), N. Y., rdo rng and the NE crs of the Peconic, L. I., N. Y., rdo rng."

(7) Red civil airway No. 27 (Nenabank, Alaska, to Wolf Int, Alaska) is added to read: "From the intsxn of the NW crs of the Nenana, Alaska, rdo rng and the W crs of the Fairbanks Alaska, rdo rng via the Nenana, Alaska, rdo rng stn to the intsxn of the SE crs of the Nenana Alaska, rdo rng and the SW crs of the Fairbanks, Alaska, rdo rng." (Note: Intsxn SE Nenana and SW Fairbanks named Wolf Int, ident: "XWO")

(8) Red civil airway No. 61 (Butler, Pa., to Washington, D. C.) is amended by changing the portion which reads: "From the Butler, Pa., nondirectional rdo bcn via the Johnstown, Pa., nondirectional rdo bcn to the intsxn of the SE crs of the Pittsburgh, Pa., rdo rng and the S crs of the Altoona, Pa., rdo rng." to read: "From the intsxn of the SE crs of the Akron, Ohio, rdo rng and the NW crs of the Pittsburgh, Pa., rdo rng via the Butler, Pa., nondirectional rdo bcn to the Johnstown, Pa., nondirectional rdo bcn." (Note: Added a portion from Columbiana intsxn to Butler (formerly Red 85 revoked) and deleted portion from Johnstown H to Flintstone Int)

(9) Red civil airway No. 62 (Pittsburgh, Pa., to Altoona, Pa.) is revoked.

(10) Red civil airway No. 85 (Akron, Ohio, to Altoona, Pa.) is revoked. (Note: Portion of Red 85 Columbiana Int to Butler H made part of Red 61)

(11) Blue civil airway No. 15 (Akron, Ohio, to Hubbard, Ohio) is amended to read: "From the Akron, Ohio, Akron-Canton County Airport ILS outer mrkr to the Hubbard, Ohio, nondirectional rdo bcn." (Note: Deleted portion Blue 15 between Huntington, W. Va., H and Columbus, Ohio, rdo rng).

(12) Blue civil airway No. 26 (Anchorage, Alaska, to Fairbanks, Alaska) is amended to read: "From the Anchorage, Alaska, rdo rng stn via the Talkeetna, Alaska, nondirectional rdo bcn; Summit, Alaska, rdo rng stn; intsxn of the N crs of the Summit, Alaska, rdo rng and the SW crs of the Fairbanks, Alaska, rdo rng to the Fairbanks, Alaska, rdo rng stn." (Note: Redesignated B-26 from Healy FM direct to Fairbanks. R-345 being rescinded)

(13) Blue civil airway No. 39 (Savannah, Ga., to Elmira, N. Y.) is amended by deleting the portion which reads: "From the intsxn of the W crs of the Elkins, W. Va., rdo rng and the SW crs of the Morgantown, W. Va., rdo rng via the Morgantown, W. Va., rdo rng stn to the New Alexandria, Pa., nondirectional rdo bcn."

(14) Blue civil airway No. 43 (Healy, Alaska, to Fairbanks, Alaska) caption changed and is amended to read: "From the intsxn of the N crs of the Summit, Alaska, rdo rng and the SW crs of the Fairbanks, Alaska, rdo rng via the intsxn of the N crs of the Summit, Alaska rdo rng and the SE crs of the Nenana, Alaska, rdo rng; Nenana, Alaska, rdo rng stn to the Fairbanks, Alaska, Rdo rng stn."

(15) Blue civil airway No. 70 (Waco, Texas, to Tulsa, Okla.) is amended by changing the words which read: "via the intsxn of the NW crs of the Waco, Tex., rdo rng and the W crs of the Dallas, Tex., rdo rng;" to read: "via the intsxn of the NW crs of the Waco, Tex., rdo rng and a line bearing 255°T from the Dallas, Tex., nondirectional rdo bcn;"

(16) VOR civil airway No. 3 (Key West, Fla., to Presque Isle, Maine) is amended by changing the portion which reads: "Flat Rock, Va., omnirange stn to the point of intsxn of the Flat Rock omnirange 023°T and the Gordonsville, Va., omnirange 056°T radials." to read: "Flat Rock, Va., omnirange stn; Brooke, Va., omnirange stn; to the Washington, D. C. terminal omnirange stn." (Note: Redesignated V3 from Flat Rock VOR via Brooke VOR to the Washington TVOR)

(17) VOR civil airway No. 4 (Seattle, Wash., to Washington, D. C.) is amended by changing the portion which reads: "Burley, Idaho, omnirange stn, including a S alternate from the Boise omnirange stn to the Burley omnirange stn via the Twin Falls, Idaho, omnirange stn;" to read: "Burley, Idaho, omnirange stn;" (Note: Revoked V4S between Boise VOR and Burley VOR and redesignated it as a part of V253 and of V269)

(18) VOR civil airway No. 16 (Los Angeles, Calif., to Boston, Mass.) is amended by changing the portion which reads: "Midland, Tex., omnirange stn, including a N alternate from the Wink omnirange stn to the Midland omnirange stn via the point of intsxn of the Wink omnirange 066°T and the Hobbs, N. Mex., omnirange 147°T radials;" to read: "Midland, Tex, omnirange stn;" and is corrected by changing the portion which reads: "Pine Bluff, Ark., omnirange stn;" to read: "Pine Bluff, Ark., omnirange stn, including a S alternate;" (Note: Revoked V16N between Wink VOR and Midland VOR. Corrected typographic omission of V16S description between Texarkana VOR and Pine Bluff VOR. V16S between Texarkana VOR and Pine Bluff VOR is an existing S alternate)

(19) VOR civil airway No. 21 (Long Beach, Calif., to the United States-Canadian Border) is amended by changing the portion which reads: "Dubois, Idaho, omnirange stn, including a W alternate between the Pocatello, Idaho, omnirange stn and the Dubois, Idaho, omnirange stn via the direct radials;" to read: "Dubois, Idaho, omnirange stn;" (Note: Revoked V21W between Pocatello VOR and DuboisVOR. This portion was redesignated as part of V269)

(20) VOR civil airway No. 35 (Miami, Fla., to Syracuse, N.Y.) is amended by changing the portion which reads: "Macon, Ga., omnirange stn; Royston, Ga., omnirange stn;" to read: "Macon, Ga., omnirange stn; Athens, Ga., omnirange stn; Royston, Ga., omnirange stn;" and by changing the portion which reads: "intsxn of the Parkersburg omnirange 060°T and the Pittsburgh omnirange 223°T radials; Pittsburgh, Pa., omnirange stn; Philipsburg, Pa., omnirange stn; Elmira, N.Y., omnirange stn;" to read: "intsxn of the Parkersburg omnirange 060° T and the Pittsburgh omnirange 223°T radials; to the Pittsburgh, Pa., omnirange stn. From the Johnstown, Pa., omnirange stn via the Tyrone, Pa., omnirange stn; Philipsburg, Pa., omnirange stn; Elmira, N. Y., omnirange stn;" (Note: Rescinded portion of V35 between Pittsburgh VOR and Philipsburg VOR. Added new portion to V35 from Johnstown VOR via Tyrone VOR to Philipsburg VOR which was formerly a part of V106. Added Athens VOR between Macon VOR and Royston VOR)

(21) VOR civil airway No. 36 (Toronto, Ontario, to New York, N.Y.) is amended by changing the portion which reads: "Elmira, N.Y., omnirange stn, including a S alternate;" to read: "Elmira, N.Y., omnirange stn;" (Note: Revoked V36S between Buffalo VOR and Elmira VOR)

(22) VOR civil airway No. 38 (Iowa City, Iowa, to Elkins, W. Va.) is amended by changing the portion which reads: "Appleton, Ohio, omnirange stn including a S alternate via the point of intsxn of the Findlay omnirange 144°T and the Mansfield, Ohio, omnirange 241°T radials;" to read: "Appleton, Ohio, omnirange stn;" (Note: Revoked V38S between Findlay VOR and Appleton VOR)

(23) VOR civil airway No. 39 (South Boston, Va., to Kennebunk, Maine) is amended by changing the portion which reads: "Herndon, Va., omnirange stn; to the point of intsxn of the Herndon omnirange 045°T and the Baltimore, Md., omnirange 346°T radials. From the intsxn of the Baltimore, Md., omnirange 015°T and the Allentown, Pa., omnirange 228°T radials via the Allentown, Pa., omnirange stn;" to read: "Herndon, Va., omnirange stn; Westminister, Md., omnirange stn; point of intsxn of the Allentown omnirange 228°T radials with the Harrisburg, Pa., omnirange direct radial to the West Chester, Pa., omnirange stn; Allentown, Pa., omnirange stn;" (Note: Added new portion to V39 from Herndon VOR to Allentown VOR via Westminister VOR and Lancaster Int. Revoked portion of V39 from Herndon VOR to Hereford Int.)

(24) VOR civil airway No. 53 (Charleston, S. C., to Chicago, Ill.) is amended by changing the portion which reads: "to the Chicago, Ill., Midway Airport terminal omnirange stn." to read: "to the point of intsxn of the Peotone omnirange 003°T and the Joliet, Ill., omnirange 056°T radials." (Note: Removed Chicago Midway TVOR from V53. No change to airspace)

(25) VOR civil airway No. 66 (San Diego, Calif., to Charlotte, N. C.) is amended by changing the caption and by adding a new last portion to read: "From the Atlanta, Ga., omni stn via the Athens, Ga., omni stn; point of intsxn of the Spartanburg, S. C., omnirange 148°T and the Charlotte omnirange 242°T radials; to the Charlotte, N.C., omni stn." (Note: Added new portion to V66 from Atlanta VOR to Charlotte VOR and Athens VOR and Unicon Int)

(26) VOR civil airway No. 69 (Shreveport, La., to Chicago, Ill.) is amended by changing the portion which reads: "to the Chicago, Ill., Midway Airport terminal omni stn." to read: "to the point of intsxn of the Joliet omnirange 056°T and the Peotone, Ill., omnirange 003°T

radials." (Note: Removed Chicago Midway TVOR from V69. No change in airspace)

(27) VOR civil airway No. 72 (Troy, Ill., to Albany, N.Y.) is amended by changing the portion which reads: "Binghamton, N.Y., omni stn; to the Albany, N.Y., omni stn" to read: "Binghamton, N.Y., omni stn; Rockdale, N.Y., omni stn; to the Albany, N.Y., omni stn." (Note: Redesignated V72 between Binghamton VOR and Albany VOR via Rockdale VOR)

(28) VOR civil airway No. 104 (Ottawa, Ont., to Plattsburgh, N.Y.) is amended to read: "That airspace over United States territory from the Ottawa, Ont., omni stn via the intsxn of the Ottawa omnirange 082°T and the Massena omnirange 346°T radials; Massena, N.Y., omni stn; to the Plattsburgh, N.Y., omni stn." (Note: Redesignated V104 between Ottawa VOR and Massena VOR via the Maxwell Int)

(29) VOR civil airway No. 106 (Charleston, W. Va., to Kennebunk, Maine) is amended by changing all before the Selingsgrove, Pa., omni stn to read: "From the Charleston, W. Va., omni stn via the Morgantown, W. Va., omni stn; Johnstown, Pa., omni stn, including a N alternate via the intsxn of the Morgantown omnirange 021°T and the Pittsburgh omnirange 117°T radials; point of intsxn of the Tower City, Pa., omnirange 279°T radial with the Philipsburg, Pa., omnirange direct radial to the Harrisburg, Pa., omni stn; Selingsgrove, Pa., omni stn;" (Note: Redesignated V106 between Johnstown VOR and Selingsgrove VOR via Reedsville Int. Former portion of V106 from Johnstown VOR to Philipsburg VOR via Tyrone VOR was redesignated as a part of V35)

(30) VOR civil airway No. 124 (Burley, Idaho, to Pocatello, Idaho) is revoked. (Note: This airway was redesignated as part of V269)

(31) VOR civil airway No. 128 (Chicago, Ill., to New Bern, N. C.) is amended by changing the portion which reads: "From the Chicago, Ill., Midway Airport terminal omni stn via the Peotone, Ill., omni stn;" to read: "From the point of intsxn of the Joliet, Ill., omnirange 056°T and the Peotone omnirange 003°T radials via the Peotone, Ill., omni stn;" (Note: Removed Chicago Midway TVOR from V128. No change in airspace)

(32) VOR civil airway No. 133 (Parkersburg, W. Va., to Flint, Mich) is amended to read: "That airspace of United States territory from the point of intsxn of the Parkersburg omnirange 172°T radial with the Charleston, W. Va., omnirange direct radial to the Morgantown, W. Va. omni stn via the Parkersburg, W. Va., omni stn; point of intsxn of the Wheeling, W. Va., omnirange 252°T radial with the Appleton, Ohio, omnirange direct radial to the Morgantown, W. Va., omni stn; Tiverton, Ohio, omni stn; Mansfield, Ohio, omni stn; intsxn of the Mansfield omnirange 345°T and the Salem omnirange 140°T radials; Salem, Mich, omni stn; to the point of intsxn of the Salem omnirange 342°T and the Lansing, Mich., omnirange 068°T radials." (Note: Added new portion to V133 from Walnut Grove Int to Parkersburg VOR)

(33) VOR civil airway No. 140 (Amarillo, Tex., to New York, N.Y.) is amended by changing the portion which reads: "point of intsxn of the Front Royal, Va., omnirange 140°T and the Washington, D.C., omnirange 249°T radials;" to read: "point of intsxn of the Gordonsville, Va., omnirange direct radial to the Herndon, Va., omni stn with the Brooke, Va., omnirange 306°T radial;" (Note: Redesignated V140 between Montebello VOR and Herndon VOR via the Remington Int)

(34) VOR civil airway No. 153 (New York, N.Y., to Syracuse, N.Y.) is amended to read: "From the Caldwell, N.J., omnirange stn via the Stillwater, N.J., omni stn; Wilkes-Barre-Scranton, Pa., omni stn; point of intsxn of the DeLancey, N.Y., omnirange 289°T radial with the Binghamton, N.Y., omnirange direct radial to the Rockdale, N.Y., omni stn; to the Syracuse, N.Y., omni stn." (Note: Redesignated V153 between Wilkes-Barre VOR and Syracuse VOR via the relocated Sidney Int)

(35) VOR civil airway No. 144 (Chicago, Ill., to Washington, D. C.) is amended by changing the portion which reads: "From the Chicago, Ill., Midway Airport terminal omni stn via the Peotone, Ill., omni stn;" to read: "From the point of intsxn of the Joliet, Ill., omnirange 056°T and the Peotone omnirange 003°T radials via the Peotone, Ill., omni stn;" (Note: Removed Chicago Midway TVOR from V144. No change in airspace)

(36) VOR civil airway No. 155 (Raleigh, N.C., to Washington, D.C.) is amended by changthe caption and all after the Gordonsville, Va., omnirange station to read: "Gordonsville, Va. omni stn; to the point of intsxn of the Gordonsville omnirange direct radial to the Herndon, Va., omni stn with the Brooke, Va., omnirange 306°T radial. The portion of this airway which overlaps the Camp Pickett Restricted Area (R-44) is excluded." (Note: Redesignated V155 to terminal at the Remington Int)

(37) VOR civil airway No. 156 (Elkins, W. Va., to Richmond, Va.) is amended to read: "From the Elkins, W. Va., omni stn via the Gordonsville, Va., omni stn; to the Richmond, Va., rdo rng stn." (Note: Added new portion to V156 from Gordonsville VOR to Richmond LFR)

(38) VOR civil airway No. 157 (Miami, Fla., to Richmond, Va.) is amended to read: "From the Miami, Fla., omni stn via the LaBelle, Fla., omni stn; Lakeland, Fla., omni stn; to the Gainesville, Fla., omni stn. From the Wilmington, N.C., omni stn via the Rocky Mount, N.C. omni stn; Lawrenceville, Va., omni stn; Richmond, Va., rdo rng stn; to the Brooke, Va., omni stn. The portions of this airway which overlap the Camp Pickett Restricted Area (R-44) and the Camp A.P. Hill Restricted Area (R-40) are excluded." (Note: Extended V157 from Richmond LFR to Brooke VOR)

(39) VOR civil airway No. 164 (Buffalo, N.Y. to New York, N.Y.) is amended by changing the caption and the portion which reads: "From the Bradford, Pa., omni stn via the intsxn of the Bradford omnirange 097°T and the Williamsport omnirange 306°T radials;" to read: "From the Bradford, Pa., omni stn via the intsxn of the Bradford omnirange 097°T and the Williamsport omnirange 306°T radials;" to read: "From the Buffalo, N.Y., omni stn via the Wellsville, N.Y., omni stn; point of intsxn of the Bradford, Pa., omnirange 097°T and the Williamsport omnirange 306°T radials;" (Note: Redesignated V164 by removing V164 number from existing airway Bradford VOR to Stonyfork Int and by adding a new portion from Buffalo VOR to Stonyfork Int via Wellsville VOR)

(40) VOR civil airway No. 170 (Milwaukee, Wis., to Philadelphia, Pa.) is amended by changing the portion which reads: "Selinsgrove, Pa., omni stn; to the West Chester, Pa., omni stn." to read: "Selinsgrove, Pa., omnirange stn; Tower City, Pa., omni stn; to the West Chester, Pa., omni stn." and by adding a new last sentence to read: "The portion of this airway which conflicts with the Indiantown Gap Restricted Area (R-69) is excluded." (Note: Redesignated V170 between Selinsgrove VOR and West Chester VOR via the Tower City VOR)

(41) VOR civil airway No. 173 (Springfield, Ill., to Chicago, Ill.) is amended by changing the portion which reads: "to the Chicago, Ill., Midway Arpt terminal omni stn." to read: "to the point of intsxn of the Joliet, Ill., omnirange 056°T and the Peotone, Ill., omnirange 003° T radials." (Note: Removed Chicago Midway TVOR from V173. No change in airspace)

(42) VOR civil airway No. 191 (Walnut Ridge, Ark., to Milwaukee, Wis.) is amended by changing the portion which reads: "to the Chicago, Ill., Midway Airport terminal omni stn." to read: "to the point of intsxn of the Joliet, Ill., omnirange 056°T and the Peotone, Ill., omnirange 003°T radials." (Note: Removed Chicago Midway TVOR from V191. No change in airspace)

(43) VOR civil airway No. 238 (Philipsburg, Pa., to Atlantic City, N.J.) is amended to read: "From the Philipsburg, Pa., omni stn via the point of intsxn of the Philipsburg omnirange direct radial to the Selinsgrove, Pa., omni stn with the Williamsport, Pa., omnirange 227°T radial; Tower City, Pa., omni stn; West Chester, Pa., omni stn; point of intsxn of the omnirange 120°T radial and the Philadelphia, Pa., Intnl Arpt ILS lclzr 256°T crs; Woodstown, N.J., omni stn; to the point of intsxn of the Woodstown omnirange 106°T and the Coyle, N.J. omnirange 203°T radials. The portion of this airway which conflicts with the Indiantown Gap Restricted Area (R-69) is excluded." (Note: Added new portion to V238 from Philipsburg VOR to Boothwyn Int via Coburn Int, Tower City VOR and West Chester VOR)

(44) VOR civil airway No. 249 (Caldwell, N.J., to Utica, N.Y.) is amended to read: "From the Caldwell, N.J., omni stn via the Huguenot, N.Y., omni stn; DeLancey, N.Y., omni stn; Rockdale, N.Y., omni stn; to the Utica, N.Y., Oneida County Arpt, ILS outer marker." (Note: Added Rockdale VOR to V249)

(45) VOR civil airway No. 252 (Binghamton, N.Y., to New York, N.Y.) is amended by changing the portion which reads: "and the Wilkes-Barre-Scranton, Pa., omnirange 358°T radials;" to read: "radial with the Wilkes-Barre-Scranton, Pa., omnirange direct radial to the point of intsxn of the DeLancey, N.Y., omnirange 289°T radial with the Binghamton, N.Y., omnirange direct radial to the Rockdale, N.Y., omnirange stn;" (Note: Redesignated V252 via relocated Herrick Int)

(46) VOR civil airway No. 253 (Utah Lake, Utah, to Boise, Idaho) is amended to read: "From the Utah Lake, Utah, Omni stn to the point of intsxn of the Utah Lake omnirange 315°T and the Salt Lake City, Utah, omnirange 265°T radials. From the Bonneville, Utah, omni stn via the Lucin, Utah, omni stn; Twin Falls, Idaho, Omni stn; to the Boise, Idaho, omni stn." (Note: Added new portion to V253 from Twin Falls VOR to Boise VOR. This portion was formerly a part of V4S between Boise VOR and Burley VOR which has been revoked)

(47) VOR civil airway No. 258 (Charleston, W. Va., to Roanoke, Va.) is amended by changing the portion which reads: "to the Roanoke, Va., terminal omni stn." to read: "Roanoke, Va., terminal omni stn; to the point of intsxn of the Greensboro, N.C., omni stn direct radial to the Montebello, Va., omni stn with the South Boston, Va., omnirange 298°T radials." (Note: Added new portion to V258 from Roanoke TVOR to Penhook Int)

(48) VOR civil airway No. 262 (Bradford, Ill., to Chicago, Ill.) is amended to read: "From the Bradford, Ill., omni stn via the Joliet, Ill., omni stn; to the point of intsxn of the Joliet omnirange 056°T and the Peotone, Ill., omnirange 003°T radials." (Note: Removed Chicago Midway TVOR from V262. No change in airspace)

(49) VOR civil airway No. 266 (South Boston, Va., to Elizabeth City, N.C.) is amended to read: "From the South Boston, Va., omni stn to the Lawrenceville, Va., omni stn. From the point of intsxn of the Lawrenceville omnirange 076°T and the Elizabeth City omnirange 311°T radials; to the Elizabeth City, N. C., omnirange stn." (Note: Added new portion to V266 from Waverly LFR to Elizabeth City VOR)

(50) VOR civil airway No. 269 (Wells, Nev., to Bubois, Idaho) is amended to read: "From the Wells, Nev., omni stn via the Twin Falls, Idaho, omni stn; Burley, Idaho, omni stn; Pocatello, Idaho, omni stn; to the Dubois, Idaho, Omni stn." (Note: Added new portion to V269 from Twin Falls VOR to Dubois VOR via Burley VOR and Pocatello VOR. Portion Twin Falls VOR to Burley VOR was formerly part of V4S between Boise VOR and Burley VOR which has been revoked. Portion Burley VOR to Pocatello VOR was formerly V124 which has been revoked. Portion Pocatello VOR to Dubois VOR was formerly V21W which has been revoked.)

(51) VOR civil airway No. 273 (Downsville, N.Y., to Syracuse, N.Y.) is amended to read: "From the DeLancey, N.Y., omni stn via the point of intsxn of the DeLancey omnirange 289°T radial with the Binghamton, N.Y., omnirange direct radial to the Rockdale, N.Y., omni stn; to the Syracuse, N.Y., omni stn." (Note: Redesignated V273 via the relocated Sidney Int)

(52) VOR civil airway No. 275 (Cincinnati, Ohio, to Detroit, Mich.) is amended by changing

AERONAUTICAL CHARTS OF THE U. S. COAST AND GEODETIC SURVEY

New editions of the charts listed below will be published in about one month making former prints obsolete for use in aviation. Orders for these particular charts should be kept to a minimum until new edition is printed.

ALTIMETER SETTING SERVICE - AIR ROUTE TRAFFIC CONTROL CENTERS:
The following governs issuance of altimeter settings by Air Route Traffic Control Centers to aircraft operating on an IFR flight plan and in direct communication with the Center:

1. Altimeter settings will be furnished, when requested by a pilot operating on an IFR flight plan, for those weather reporting stations within the center's control area.
2. Requests for altimeter settings at weather reporting stations not within the center's control area will be referred to the appropriate Air Traffic Communications Station.
3. The time and location of the weather station reporting the altimeter setting will be specified. The following phraseology will be used: The (Time) (Station Location) Altimeter (Setting) Example: "The One Four Three Zero Columbus Altimeter Three Zero Zero Two."

ATC PROCEDURES - APPROACH CONTROL: On page 66 of FIM, Volume 10, dated June 15, 1956, the following note should be added preceding the last paragraph:

"NOTE: A clearance for a specific type of approach (ILS, ADF, or Straight-in Approach) to an aircraft operating on an IFR flight plan does not necessarily mean that priority will be given over other traffic for a landing. Often because of local traffic or runway in use, it may be necessary for the controller, in the interest of safety, to provide a different landing sequence."

AIRMAN'S GUIDE CORRECTION: Correct Vol. 12, #10, page 40, item 19, under On Request Reporting Points: Cancelled: LASCASSAS, TENN. (LF) INTSXN - the intsxn of the SE crs of the Nashville, Tenn. LFR and the 257°T bearing from the Smithville, Tenn. Rbn.

Correct Vol. 12, #10, page 34: "Revision to Control Area/Flight Advisory Boundaries between Oklahoma City RAPCON and Kansas City ARTCC: The last sentence should read: "Thence direct to and along the Kansas City-Oklahoma City Control boundary to a point 50 s mi SE of the Gage, Oklahoma, VOR on the NE edge of civil airway V-17 and Red 59."

AIRPORT AND RADIO NOTICES

LEGEND

(3-31)	-	Month and day item was reported.
**	-	New or revised airport, caution area or miscellaneous data. Pilots should inscribe this information on charts and records.
✱	-	New or revised radio data. Pilots should inscribe this information on charts and records.

NOTE: Because of space, limitations, such data usually are cited only once.

ALABAMA: ANNISTON-RADIO: VOR courses 360°-07° have bends and roughness out of tolerance. (12-1)

AUBURN-OPELIKA ARPT: Lgtg facs inop. (7-6)

BESSEMER-DURHAM ARPT: Caution - auto drag strip runs parallel to sod landing strip with separation of 50'. Auto racing is NOT done on rnwy. Drag strip ends are marked. Racing is done on Sun only. (9-28)

BIRMINGHAM-RADIO: VOR operg test basis only, at lat 33-40-11, long. 86-53-58, about 10 mi NW Birmingham Mun arpt. (12-14) Caution - all arwys and Ints based on Birmingham or Meridian VORs are not usable for navigational purposes until the stns are recmsnd at new lctns. (4-18)

BIRMINGHAM ARPT-TOWER: Aug 7, MM and LMM shut down - relctn. (8-7) FLD: Caution - tfc operg in area from 165° clockwise thru 235° not visible from twr to dist of 4 s mi. Rnwy 8-26 perm clsd to high performance single eng conventional lndg gear type acft, including T-6. Rnwy 18-36 clsd between 0800-1700 daily unless otherwise advised by ctl twr. (7-9) Acft requiring after-burners prohibited use of arpt. Exten const work in progress SW end NE/SW rnwy. (4-9) ILS apch lgt lane shut down until approx Nov for relctn due rnwy ext. (5-1)

DOTHAN-NAPIER FLD: Caution - helicopters from Rucker Army Air Base trng.

EVERGREEN-RADIO: VOR radials 320° thru N unusable acct severe scalloping and bends.

EVERGREEN-MIDDLETON ARPT, 20, MSY-ATL: Rnwy and threshold lgts inop. (2-6)

HUNTSVILLE-RADIO: VOR radials 005°-030° have roughness and bends out of tolerance.

MOBILE-RADIO: June 19, VOR arwy radials figt-checked. Radial 018°-028° out of tolerance. due to severe scalloping. (6-19)

ALABAMA: MOBILE-BATES FLD-TOWER: June 18, ILS not to be used for automatic approach below 300'. (6-18) FLD: Due space shortage, all transient and lcl acft not permitted parking space on admin bldg ramp xcpt enplaning and deplaning passengers. Use facs E side of fld. (11-10) Unlgtd trees penetrate apch zone to all rnwys. Use caution. 200' and 1/2 mi is absolute take-off min for all acft. (4-22)

MONTGOMERY-SPECIAL NOTICE: All acft operg in the Maxwell AFB and Dannelly Fld ctl zones are cautioned to maintain cont rdo ctc with the appropriate ctl twr. Exten flying of both conventional and jet type acft in progress at both arpts. (4-19)

MONTGOMERY-DANNELLY FLD: Dips in E/W rnwy 1500' from E end. Lgtd ditch approx 200' NE of apch end of rnwy 21. Twr unable to ctl taxiing acft on E/W taxiway from a point adj to ANG hangar to W end. Use caution taxiing. (2-11)

MUSCLE SHOALS-RADIO: VOR courses 020°-050°, 110°-150° and 285°-335° clockwise from stn out of tolerance beyond 15 n mi acct scalloping and bends. (11-2)

ARIZONA: AJO ARPT: Beacon and lights inoperative. (6-18)

CLEMENCEAU-COTTONWOOD-CLEMENCEAU ARPT: All servicing temp suspended. Fld open days only. Rnwy avail. nights upon prior req. Emerg only. (4-23)

COCHISE-RADIO: VOR/DME coverage 015°-045°, 30 n mi; 090°-110°, 40 n mi; 190°-215°, 35 n mi; 215°-235°, 30 n mi; 235°-255°, 35 n mi at MEA. (5-8)

FT. HUACHUCA-SPECIAL NOTICE: Caution - extensive artillery firing and drone flying in immediate vicinity. Two-way rdo and prior clearance from Libby AAF twr required before flight within R-191. Libby twr gds: 121.5, 122.5, 126.3, 126.18, 243.0 mc. Rdo bcn (FHU 410 kc) and TVORW (FHU 111.6 mc) only rdo aids to air nav suitable for normal use. Other experimental rdo nav aids oper from time to time not suitable for use under any circumstances. Army Electronic Proving Ground reports that on several occasions, civil acft have been endangered by failure to observe the requirements listed. (4-19)

GILA BEND-RADIO: VOR has slow bends and scalloping starting at 17 n mi and 8000' MSL on 247° radial beyond tolerance. (6-24)

GLEN CANYON DAM SITE-SPECIAL NOTICE: Pilots should not fly below canyon rim. Cables strung across canyon. (11-1)

GRAND CANYON-SPECIAL NOTICE: Pilots should not fly below rim of canyon. Cable not readily visible to acft strung across canyon lctd near Quartermaster Point in Lower Granite Gorge between Pierce Ferry and Spencer Canyon. (1-2)

**KINGMAN ARPT: Fld lights activated for 25 mins by 3 pulses of mike button on 121.7 mc when within 10 mi radius. (7-17)

PHOENIX AREA - SPECIAL AIR TRAFFIC RULES: Aircraft operg under VFR or VFR conditions shall not be operd Mon thru Fri from 0600M to 1800M on Green Arwy #5 and Victor Arwy 16 W of Phoenix in the areas described below except at the altitudes prescribed therefor unless special permission is obtained from Air Traffic Control. From 112°28' to 112°35', which is the area between north-south lines drawn thru the Perryville FM and the town of Buckeye, between 700' above the surface and 5000' MSL, regardless of weather conditions. Further, when the reported ceiling at Phoenix is less than 8000', acft shall not be operd at alts above 2000' MSL and below 4000' MSL in the area between 112°16' and 112°28', which is the area between north-south lines drawn thru the town of Tolleson and Perryville FM. When the reported ceiling at Phoenix is 8000' or more, acft shall not be operd at alts above 7000' MSL and below 9000' MSL in the area between 112°10' and 112°28', which is the area between north-south lines drawn thru the town of Tolleson and the east edge of Glendale and the Perryville FM. (8-15)

PHOENIX-SKY HARBOR ARPT-SPECIAL NOTICE: Following changes in instrument apch procedures: LFR procedure: Initial approach from Perryville FM 4000, from Tolleson Int 2600. Missed apch: Climb to 2500 on W course PHX LFR, make right climbing turn returning to LFR. Hold on E course LFR at 5000 in standard pattern within 15 mi. VOR procedure: Initial apch from Perryville FM 4000, from Tolleson Int 2600. Missed apch: Climb to 2500 on radial 258, make a right climbing turn, returning to VOR. Hold east of VOR on radial 076 at 5000 in standard pattern within 15 mi. Tolleson Int - Int GBN VOR radial 027 and PHX VOR radial 258 or W course PHX LFR. All other items these procedures unchanged. (6-14)

**PHOENIX-SKY HARBOR ARPT: Clsd to mil F-89 type acft or acft rqrg use of after burners for take-off, xcpt prior permission arpt manager. (12-7) Functioning 2-way rdo rqrd.

PRESCOTT-RADIO: VOR coverage 185°-225°, 35 n mi at 10,000'; 135°-145°, and 165°-185°, 39 n mi at 10,000'.

**SALOME ARPT, 27B, LAX-PHX: Caution - puncture vines. (6-18)

SAN SIMON-RADIO: VOR coverage 030°-070°, 30 n mi; 160°-260., 30 n mi. (7-17)

SCOTTSDALE-THUNDERBIRD #2 ARPT: Closed. (3-26)

ARIZONA: TUCSON-RADIO: VOR/DME coverage: 360°-050°, 35 n mi 11,000';050°-060°, 22 n mi 11,000';060°-075°, 35 n mi 11,000';075°-085°, 21 n mi 11,000';090°-170°, 40 n mi 12,000';225°-230°, 40 n mi 7,000';330°-345°, 35 n mi 11,000';345°-360°, 25 n mi 11,000'.

TUCSON ARPT - SPECIAL NOTICE: As required, target towing on a direct route off arwy to Ajo, Ariz. to be conducted week-ends - caution. (2-15)

TUCSON-DAVIS MONTHAN AFB-RADIO: USAF UHF/DF steers unreliable beyond 35 mi at or below the following alt: (a) NW quad to 10,000'; (b) SW quad 10,000'; (c) SE quad 12,000' (d) NE quad 13,000'. (6-20)

YUMA-RADIO: VOR coverage 280°-300°, 30 n mi MEA. (5-18)

YUMA-VINCENT AFB: All acft not equipped with 2-way rdo are advised to use extreme caution while operg within a 5 mi radius of arpt due to heavy jet tfc. B-57 type acft towing 10,000' of cable and tow target in vcnty. All acft refrain from flying in close proximity of B-57 type acft in Yuma area. (2-11)

ARKANSAS: BLYTHEVILLE - SPECIAL NOTICE: All acft operg under VFR adj to Blytheville AFB are advised to use extreme caution due to extensive IFR jet tfc. (7-18)

**CAMDEN-HARRELL FLD: WNW/ESE rnwy perm clsd. (8-12)

PINE BLUFF-RADIO: VOR shut down until approx Sept. 1. During shutdown, VOR flights authorized to use PBF homing fac in lieu VOR except V-16S TXK to PBF unusable. Ints and alts as charted. (3-22)

TEXARKANA-RADIO: DME coverage 145°-235°, 1700' MSL 30 n mi; 235°-270°, 1800' MSL 35 n mi. (5-21)

CALIFORNIA: APPLE VALLEY ARPT: Caution - const - men and equip. on fld. (4-26)

★ARCATA-RADIO: VHF/DF cmsnd. Freqs: 122.1, 126.7, 121.5, 135.9 mcs. (8-5) VHF/DF coverage 40 n mi at MEA except 030°-040°, 11,000'; 040°-060°, 12,000'; 060°-090°, 13,500'. (8-9)

BASS LAKE-WISHON ARPT: Clsd due grading and reoiling. (6-13)

BECKWOURTH-PLUMAS CO. ARPT: Clsd due rnwy resurfacing. (6-24)

BLYTHE-RADIO: VOR/DME coverage 45 n mi except 25 n mi 180°-200°; 30 n mi 280°-300°; 20 n mi 300°-320°; 35 n mi 345°-015° at MEA. (8-20)

BONSALL-SHEARER'S RANCH ARPT: Abandoned until further notice. (2-4)

BRAWLEY ARPT: Rnwy 12-30 clsd. Use parallel dirt rnwy. (7-26)

BURBANK-LOCKHEED AIR TERMINAL-TOWER: ILS lclzr shut down until approx Sept. 15-relctn of apch light system. Glide slope angle will be 3°.

CAMARILLO-RADIO: All courses have multiples. (6-17)

CRESCENT CITY-RADIO: VOR arwy radials flight-checked. Courses 90°-330° usable dist 22 n mi; 350°-90°, 26 n mi at 7000'; 43 n mi at 8000'.

DAGGETT-RADIO: VOR flight-checked on arwy radials only.

DINUBA-ALTA ARPT: Arpt unlighted. (4-22)

DIXON ARPT: Closed. (8-30)

EL MONTE-EL MONTE-L. A. ARPT: 2500' rnwy clsd during August. (7-25)

ELSINORE ARPT: Caution-glider activity week ends. Squirrel holes S edge of lndg area.

FILLMORE-RADIO: VOR coverage 320°-355°, 35 n mi at 11,000'; 280°-320°, 26 n mi at 11,000'.

FT. JONES-RADIO: VOR has lgt course roughness all quads. Only arwy radials flight-checked. About Sept. 19, VOR will be shut down until approx October 17-modernization. Durg this period the following arwys will be unusable for IFR opern: V23 Red Bluff-Talent Int.; V23E Fort Jones - Klamath Junction Int. The Bray Int. will be unusable.

FORTUNA-RADIO: VOR has lgt to moderate scalloping beyond 26 n mi. Only arwy radials flight-checked. (10-6) DME coverage 335°-350°, 43 n mi at 3000'; 350°-10°, 43 n mi at 8000'; 10°-30°, 43 n mi at 9000'; 30°-120°, 35 n mi at 9000'; 120°-150°, 35 n mi at 6500'; 150°-335°, over water, not checked.

FRANKLIN ARPT: Rnwy 15-33 clsd. (7-12)

FRESNO AIR TERMINAL: Extreme caution advised in vicinity of arpt, particularly when using VOR arwys. Jet acft climbing and descending in areas of extended centerlines rnwys 29-11 and areas N and E of arpt. Const and equip. both ends rnwy 29-11 and adj taxiways. (2-5)

**GLENDALE-GRAND CENTRAL ARPT: NW/SE taxi strips SW side of fld perm clsd. Extensive const in progress. Fld clsd to all acft at sunset. (10-5)

★HAWES-RADIO: USAF H fac cmsnd. Freq: 376 kc. Ident: HAZ. Lctd lat 35-55-38, long. 117-22-00. Bear. & dist. to George AFB: 164°, 19.0 n mi. Class: HW. (8-7)

LONG BEACH-RADIO: DME coverage 43 n mi as follows: 280°-305°, 5000'; 305°-340°, 7000';340°-040°, 12,000'; 040°-070°, 8000'; 070°-100°, 7000'; 100°-280°, 4000'. (9-13)

CALIFORNIA: LONG BEACH ARPT-TOWER: ILS glide slope subject to indef shutdown periods during arpt const.(8-18) VHF/DF bearings unreliable below 12,000' MSL SW quad between 200° and 230° true.(5-6) FLD: Several 230' MSL portable oil derricks NW,W,and S of fld.No fuel servicing avail. for civil acft 2400-0600. Neon apch lgt lane rnwy 30 discontd indefinitely. (1-1) Caution-temp p-line with wooden poles 29' high serving const camp erected approx 315' S of and roughly parallel to apch end rnwy 30 for 800'.(3-22) Rnwy 30 clsd all lndgs 0700-1500P wk-days only due 100' booms in apch area. First 800' rnwy 30 and adj taxiways clsd const; 6200' avail. lndgs and tk-offs. Rnwy 12 clsd. Until further notice, straight-in ILS lndg min rnwy 30 daylgt hrs only -500'/1 mi. (6-25)

LOS ANGELES-RADIO-SPECIAL NOTICE: Transcribed wea bdcasts shut down - modernization. Manual bdcast continues on VOR and both VOR & LF combined. (4-26)

LOS ANGELES-RADIO: VOR coverage 275°-315°, 30 n mi at min en route alt. Light to moderate scalloping below 3000' MSL. (10-23) About Aug 19, LF rng will be shut down until approx Aug 29 - conversion to H fac, with voice. Freq and ident remain the same. Voice controlled by ATCS. (7-19) The following arwys will be unusable durg shutdown LF rng: Amber 1 BUR-LGB, Amber 6 CAV-LAX, Green 5 LAX-RIV, Red 65 OCN-LAX. The following LF reporting points will also be unusable: Avalon, San Pedro, Malibu and La Habra. (7-30) Concurrent with cmsng of H fac the idents of following FM's will be: Hollywood Hills & Downey - dot dash; La Habra - dash dot. (8-13)

LOS ANGELES INTERNATIONAL ARPT-TOWER: VHF/DF unreliable 045°-060° below 13,000' MSL beyond 30 n mi. FLD: Use paved areas only. New lgtd rnwy 16-34 approx 4000' W of Sepulveda Blvd clsd -avail. 30-min req thru twr. Equip. crossing rnwy. During VFR wea conditions, civil acft ctc twr on 118.9 mc or listen 118.9 mc, trans 122.7 mc at least 10 mi out. During IFR wea, civil acft ctc Apch Ctl on 118.1 or 119.3, or listen 118.1 or 119.3 mc and trans 122.7 mc. USAF-NAVY-CG: VHF equipped acft ctc Apch Ctl on 118.1 or 119.3 mc. UHF equipped acft ctc Apch Ctl on 250.2 or 269.0 mc. Pilots are urged to use extreme caution when operg off-shore W of arpt. All jet acft departing rnwys 25L-25R climbing in VFR conditions use a 200° departure corridor which originates at a max of 3000' MSL, approx intsxn of extended centerlines of above rnwys with the shoreline. Acft proceeding E-bound from Malibu or Pt. Dume intsxns in VFR conditions making a track which approx entended centerlines of above rnwys are cautioned not to descend below 4000' MSL until passing shoreline or Los Angeles Omni, unless cleared otherwise by ATC. Jet acft pat downwind leg is 1500' MSL. Acft not intending lndg at arpt should avoid apch areas to W of arpt and E of arpt between Downey rbn and arpt below 3000' in VFR wea. If desiring to cross apch area below 3000' ctc Los Angeles Apch Ctl before crossing. Recommended cross tfc plan crossing crs at 3000' or above ceiling permitting, directly over arpt or between LFR and arpt. Avoid shoreline W due hi-performance jet acft. Due non-visibility twr unable ctl tfc last 2400' rnwy 34. Nov 30, transmissometer cmsnd, furnishing rnwy visibility for rnwys 25L and 25R. Visibility to be added to observations when prevailing visibility is less than 1-1/2 mi. Hi-intensity apch lgts rnwy 25L converted to centerline system extending 3000' E of rnwy pavement. Apch lgt lane sequenced flashers avail. on test basis at pilot's request. Flashers extend from 1200' to 3000' from end rnwy 25L. (7-11)

LUCERNE VALLEY-DOUBLE J RCH ARPT: Length of strip reported increased to 3000'.

MENDOTA ARPT: New arpt reported: Lctd 1/4 mi E; elev 174'; 1 rnwy -(15-33) -2300' x 90' (dirt & sand compact): remarks - 6' fence at each end. (7-23)

MOFFETT FIELD-SPECIAL NOTICE: Due to hvy jet tfc, acft operg vicinity Moffett Fld ctl zone in VFR wea exercise extreme caution passing thru ctl zone at alts below 2000' VFR and below 4000' during stratus conditions. (6-17)

MONTEREY-PENINSULA ARPT-RADIO: Soon ILS will be cmsnd. Lclzr freq: 110.1 mc, ident:MRY. Lctd 1000' SE on a centerline of NW/SE rnwy. Glide slope freq: 334.4 mc. Lctd 825' from apch end NW/SE rnwy and 236' N of centerline of rnwy. Glide angle 3.0°. Apch bear.: 84°. LMM freq: 260 kc, ident: RY. MM lctd 0.60 mi from apch end rnwy. LOM freq: 278 kc, ident: MR. OM lctd 5.14 mi from apch end rnwy. Disregard spurious signals.(8-9)

OAKLAND-SPECIAL NOTICE: Pilots proposing transbay flgt should ascertain that VFR wea exists within both San Francisco and Oakland Control Zones, or should obtain ATC clearance for flgt within a ctl zone when wea is less than VFR, since ceiling and visibility mid-bay is frequently less than at the two terminals. Rotating beam ceilometer in operation. Hereafter ceiling obstructions of less than 1500' will usually pertain to the middle marker location. Tfc operg in VFR wea should avoid vcnty of Alameda NAS. Extensive tfc including jets operate in tfc pat up to 2000' within a radius of 1.7 n mi of fld. Exercise extreme caution in these areas.

OAKLAND-RADIO-SPECIAL NOTICE: Military acft planning to use VHF communications and proposing IFR flight into Oakland, Alameda NAS or Hayward should contact Oakland

CALIFORNIA: Approach Control on 118.1 mc, or proposing IFR flight into San Francisco should contact San Francisco Approach Control on 118.5 mc. Communications during IFR flight should not be conducted with Oakland Approach Control or San Francisco Approach Control utilizing the freq 126.18 mc unless 118.1 or 118.5 mc is not avail. Due to extreme congestion, 126.18 mc is not considered a suitable communications channel for IFR flight into Oakland, Alameda NAS, Hayward or San Francisco. (7-18)

OAKLAND-RADIO: VOR coverage 35 n mi N at min instr alt.(1-14) DME coverage 30°-60°, 26 n mi at 5000'; 60°-80°, 35 n mi at 5000'; 280°-290°, 35 n mi at 4000'; 340°-350°, 35 n mi at 6000'; 350°-030°, 17 n mi at 4000'.

OAKLAND-AIR ROUTE TRAFFIC CONTROL CENTER-SPECIAL NOTICE: Jet approaches and lndgs at Oakland, San Francisco and Sacramento, as depicted on apch plates JAL-294-RNG, JAL-375-RNG and JAL-358-ADF, are to be used for emerg only. (4-24)

★OAKLAND-METROPOLITAN-OAKLAND INTNL ARPT-TOWER: Aug 1, VHF/DF cmsnd. SHERIDAN-RADIO: VOR coverage lmtd to approx. 35 n mi between 150° and 280°. Moderate course roughness exists in mountainous area.

THERMOPOLIS ARPT: Caution-1800' S end N/S rnwy clsd-const; only 3300' avail.

TORRINGTON ARPT: Oil well storage tanks lctd on S edge E/W rnwy 300' from W end. Oil well pumping unit lctd on E side NE/SW rnwy 300' from SW end of rnwy. Low flying dusting and spraying type acft operg from arpt thru Sept. 30. (4-11)

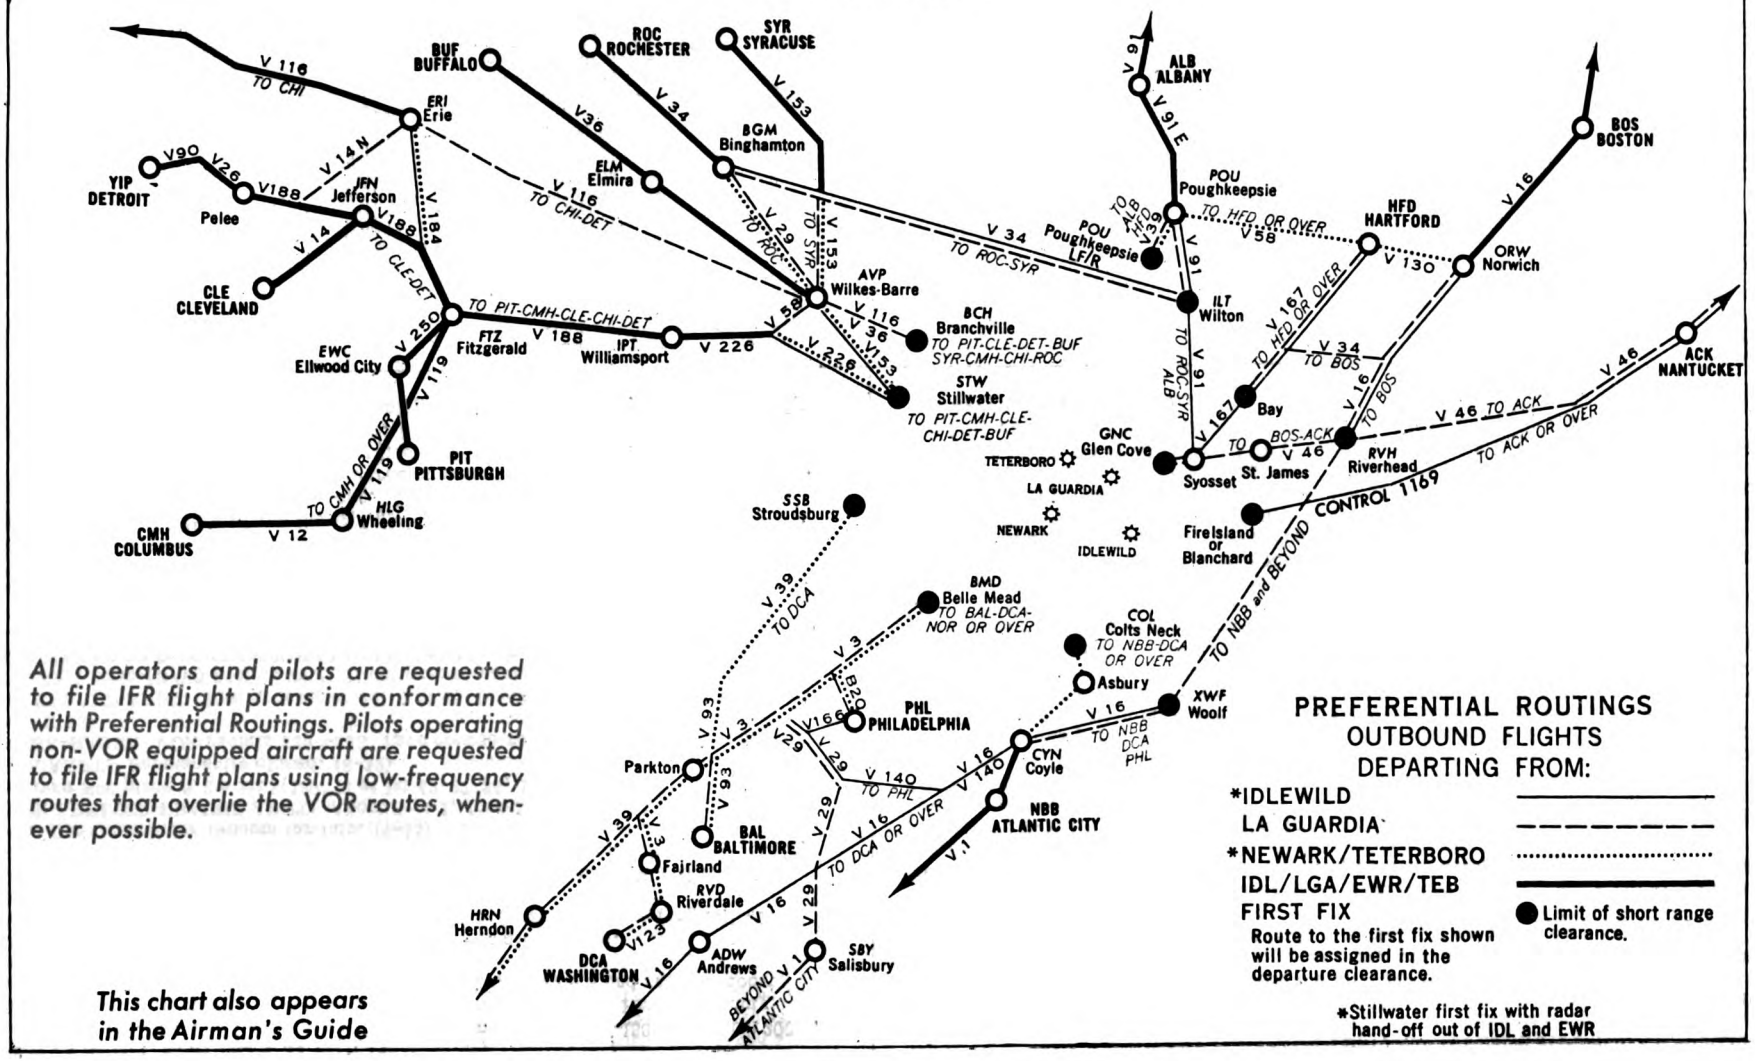
PUERTO RICO: SAN JUAN-ISLA GRANDE ARPT: First 500' W end rnwy 9R-27L unusable. Daylgt operns proceed with caution-ngt operns observe threshold lgts. Use outside taxiway in front of large hangar near entrance. Equip. on hangar ramp. (4-12)

SAN JUAN-PUERTO RICO INTNL ARPT: Parking circles, 2,3,4 & 5 on N departure ramp not fully visible from twr-caution. Lgtd temp steel twr, 110'MSL, lctd approx 3500' off N boundary rnwy 7-25. (5-20)

NEW YORK ARTC CENTER

PREFERENTIAL ROUTES

Published at Washington, D. C. by the
Coast and Geodetic Survey
AUGUST 7, 1957



All operators and pilots are requested to file IFR flight plans in conformance with Preferential Routings. Pilots operating non-VOR equipped aircraft are requested to file IFR flight plans using low-frequency routes that overlie the VOR routes, whenever possible.

PREFERENTIAL ROUTINGS
OUTBOUND FLIGHTS
DEPARTING FROM:

- *IDLEWILD
- LA GUARDIA
- *NEWARK/TETERBORO
- IDL/LGA/EWR/TEB
- FIRST FIX — Route to the first fix shown will be assigned in the departure clearance.

● Limit of short range clearance.

*Stillwater first fix with radar hand-off out of IDL and EWR

This chart also appears in the Airman's Guide

REVISIONS TO STANDARD INSTRUMENT APPROACH PROCEDURES

Bearings, headings, courses & radials are magnetic. Elevations & altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.

CORRECTIONS

CHICAGO, ILL. - O'HARE INTN'L ARPT: TVOR-22, Amdt. 3, Effect. 14 Sept. 57: In 2nd line of text, "Minimum altitude over Int. on final approach course", change intersection description to read "(Int. R-032 ORD and R-146 EEL or Radar Fix)", in lieu of "(Int. R-212 ORD and R-149 EEL or Radar Fix)".

STANDARD INSTRUMENT APPROACH PROCEDURE—TYPE RADAR

If a radar instrument approach is conducted at the below named airport, it shall be in accordance with the following instrument procedure, unless an approach is conducted in accordance with a different procedure authorized for such airport by the Administrator of Civil Aeronautics. Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the radar controller. From initial contact with radar to final authorized landing minimums, the instructions of the radar controller are mandatory except when (A) visual contact is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach. Except when the radar controller may direct otherwise prior to final approach, a missed approach shall be executed as provided below when (A) communication on final approach is lost for more than 5 seconds during a precision approach, or for more than 30 seconds during a surveillance approach; (B) directed by radar controller; (C) visual contact is not established upon descent to authorized landing minimums; or (D) if landing is not accomplished.

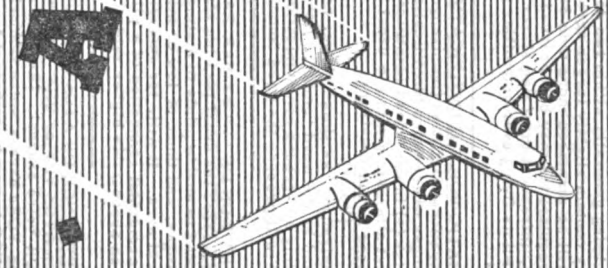
AIRMAN'S GUIDE



How to use this Guide - page 2

Notices to Airmen - page 2

VOL.12, NO. 13 **SEPTEMBER 3, 1957**

The AIRMAN'S GUIDE is issued every two weeks. This issue includes all data on record as of 0001 E.S.T. on the above date. For later information consult Teletype NOTAMS.

...ST... UNIVERS... SEP 1... 1957 ...LIBRARY

U.S. DEPARTMENT OF COMMERCE
CIVIL AERONAUTICS ADMINISTRATION
GENERAL SERVICES OFFICE

NOTICES TO AIRMEN

SPECIAL NOTICES

✓ Indicates new or revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a Notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the General Services Office, Attention: W-120 (formerly W-52), CAA, Washington 25, D. C.)

Permanent airport data changes should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide

---

HOW TO USE THE AIRMAN'S GUIDE: The Airman's Guide is issued every two weeks Every issue contains a Notices to Airmen section; every other issue additionally contains a Radio Facility Data section; and once each quarter the Directory of Airports appears in an issue containing both of these sections

CONTENTS: The contents of each issue are noted on the front cover. The first page of each section carries the Legend for interpreting codified information. Material normally included in each section is as follows:

(1) Notices to Airmen: Gives current condition of facilities and any special flight regulations or restrictions; cites data changes which serve to correct less frequently issued publications or charts; included as Special Notices are amendments to restricted areas, location identifiers, minimum en route IFR altitudes, civil airways, control areas, control zones, reporting points, VOR check points, standard instrument approach procedures, etc.

(2) Radio Facility Data: Lists radar facilities, instrument landing systems, and all other aeronautical radio facilities with their transmitting and guarded frequencies, identification, station class, range courses and remarks.

(3) Directory of Airports: This codified directory covers airport type, class, elevation, runway length and number, lights, servicing, obstructions, fuel octanes, weather reports available, unicom available, and remarks.

SPECIAL NOTICES: Special Notices usually appear at the beginning of the Notices to Airmen section. Special Notices are frequently indicated on the front cover, giving the subject and page number where the information is found.

CIVIL USE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission.

In the case of Air Force Bases, pilots must have on file with Headquarters USAF a "HOLD HARMLESS" AF form 180 and in their possession a properly signed and executed AF form 181 permit. Application for these forms may be made to: Assistant Chief of Staff, Installations, HQ, USAF, Washington 25, D. C. This regulation will be strictly enforced.

For Naval Installations, prior permission should be requested from the Chief of Naval Operations (OP 532) via the Commanding Office of the field concerned, (who has the authority to approve landing rights for certain categories of civil aircraft). However, with minor exceptions, authority to use Navy field is granted only to aircraft on government business, or when no suitable civil airport is available in the vicinity.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport

FLIGHT PLANS: Pilots are urged to file VFR flight plans in person or by telephone prior to departure. Radio should be used for filing flight plans only when it is impossible to file in person or by telephone. This procedure is necessary in order to avoid congestion on the already busy air-ground communications channels. These channels should be reserved for essential in-flight communications. All pilots will benefit by following this practice.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical locations. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations).

Omniranges where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification:

e.g. Long Beach omnirange (Voice) — .-.. --- -... (LGB in Code)

For omniranges, as shown above, normal voice identification consists of the name of the omni followed by the word "omni". However, if the omni is unattended, i.e. if no facility for providing air-ground communications services is associated with the omni the word "unattended" will precede the word "omni". Example: AIRVILLE UNATTENDED OMNI.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver The "V" is transmitted at an appreciable higher rate of speed than the location identifier.

INTERFERENCE ON ATCS COMMUNICATIONS CHANNELS: If excessive interference is noted on ATCS VHF or UHF simplex frequencies, pilots should request the ATCS to reply on the VOR voice channel. (Reference to the Air Navigation Radio Aids Section will indicate which VORs have a voice channel). This will often expedite the exchange of messages as the VOR has a clear channel for communications.

NEW UNICOM FREQUENCY: Frequency 123.0 mc has been designated for UNICOM by the Federal Communications Commission where an airport is served by a control station. Where there is no control tower or communications station, 122.8 mc is the frequency designated for use. Also 122.8 mc may be used by acft in civil defense work. These frequencies shall not be used for air traffic control purposes and only one UNICOM will be authorized at each landing facility.

RUNWAY VISUAL RANGE REPORTS AT NEWARK, N. J.: Effective March 3, 1956, measurements of runway visibility for Runway 4 at Newark, New Jersey, will be in terms of Runway Visual Range which is the distance high intensity runway lights can be seen by an observer located at the runway threshold viewing the lights in the same direction as a pilot making an approach.

The ILS and PAR instrument approach procedures for Newark have been amended to authorize 2600' of runway visual range as an additional operating minimum for straight-in approaches to Runway 4. When measurements of Runway Visual Range are being taken, the tower will give pilots intending to land straight-in on runway 4, the reported Runway Visual Range. When the meteorological ceiling and visibility (contained in "main body" of sequence report which is the average weather for the airport proper) are reported below minimums, (e.g. 200, 5), an approach may be conducted to Runway 4 provided Runway Visual Range is reported at or above 2600'. The "remarks" portion of the hourly weather sequence for Newark will report Runway Visual Range in hundreds of feet, and runway visibility will no longer be reported in miles and fraction.

Since Runway Visual Range recognizes the additional penetration provided by high intensity runway lights and is measured in terms of what a pilot actually sees, pilots will have better assurance of finding runway conditions substantially as reported when arriving over the threshold.

The Runway Visual Range minimum of 2600' is also based on the penetration ability of the approach lighting system installed at Newark which is designed to assure earlier transition from instrument to visual flight.

GLIDE SLOPE FLARE: Modification of null reference glide slope facilities will result in glide slope flare at about thirty (30) feet above runway. Caution advised on automatic approaches continued past runway threshold.

ATC PROCEDURES - APPROACH CONTROL: On page 66 of FIM, Volume 10, dated June 15, 1956, the following note should be added preceding the last paragraph:

"NOTE: A clearance for a specific type of approach (ILS, ADF, or Straight-in Approach) to an aircraft operating on an IFR flight plan does not necessarily mean that priority will be given over other traffic for a landing. Often because of local traffic or runway in use, it may be necessary for the controller, in the interest of safety, to provide a different landing sequence."

IFR RATE OF CLIMB OR DESCENT: In the interest of standardizing operating procedures for IFR flight and to provide greater utilization of available airspace, pilots are requested to adhere to the following procedure when cleared by air traffic control to climb or descend in excess of 1000 feet to an approved altitude:

1. Unless cleared otherwise by air traffic control, climb as rapidly as practicable to 1000 feet below the assigned altitude and then not to exceed 500 feet per minute until the assigned altitude is reached.
2. Unless cleared otherwise by air traffic control, descend as rapidly as practicable to 1000 feet above the assigned altitude and then not to exceed 500 feet per minute until the assigned altitude is reached.

ATC DEPARTURE CLEARANCES: Effective November 1, 1956, air traffic controllers will discontinue issuing departure clearances specifying that any portion of the departures shall be conducted in "VFR conditions" unless provision of positive separation will result in an excessive departure delay and the pilot indicates that he will accept a VFR restriction. To reduce communications and expedite departures wherever possible, pilots should include in their requests for departure clearances a statement that they will accept a VFR restriction either during climb to cruising altitude or to a specified altitude

---

INABILITY TO COMPLY WITH ATC CLEARANCES: The pilot should always advise air traffic control when his aircraft is not equipped or its performance is insufficient to comply with an issued air traffic control clearance. A brief reason such as "unable account loads" or "unable transmit 3023.5" may be included if considered necessary for clarification. The pilot may then expect an amended air traffic control clearance.

NOTIFICATION OF NON-COMPLIANCE BY MILITARY AIRCRAFT: The 323rd Fighter-Bomber Wing, Bunker Hill AFB, Indiana is performing low altitude navigational training flights at two hundred feet for the purpose of pilot proficiency under the authority of Section 60.1(a) of the Civil Air Regulations. Route of flight: Bunker Hill AFB, Indiana heading 261° to Loda, Illinois; 280° to Lake Bloomington, Illinois; 059° to a point at latitude 40-55, longitude 88-24; 088° to latitude 40-53, longitude 86-53 (approximately 2 nautical mi North of Monon, Indiana); 112° climbing to traffic altitude to Bunker Hill AFB, Indiana, point of beginning

The Army Aviation Training Detachment, Edward Gary Army Air Force Base, San Marcos, Texas, is conducting aerobatic training on civil airways V222 and V198 under authority of Part 60.1(a) of the Civil Air Regulations. The training activity is being conducted below 5000 feet MSL in VFR conditions between Smithville intersection and San Antonio VOR on V222, and between Eagle Lake and San Antonio VOR's on V198. Flights operating between those points on V222 and V198 at less than 5000 feet MSL should do so with extreme caution.

ATC PROCEDURES - RADAR TRAFFIC CONTROL: On page 67 of FIM, Volume 10, dated June 15, 1956, insert preceding the last sentence of the first paragraph:

"Therefore, aircraft must not deviate from headings issued by approach control and must not deviate from the normal final approach course unless a clearance to do so is received from air traffic control. After passing the approach fix (outermarker, radio range, etc.) on final approach, aircraft are expected to proceed straight to the airport and complete the apch or effect the missed approach procedure set forth for that airport"

And following the first sentence of the second paragraph, insert:

"Whenever the proposed routing beyond the short-range clearance limit differs from that filed in the original flight plan, the amended routing will be specified, in the short-range clearance issued to the pilot before takeoff. If a loss of two-way communications occurs, the pilot will be expected to follow the amended routing to filed flight plan route and/or destination. (Note: This procedure is also applicable when nonradar short-range clearance is issued)."

WASHINGTON, D. C. HIGH DENSITY AIR TRAFFIC ZONE: Effective April 15, 1957, all the airspace within the current boundaries of the Washington Control Zone extending upwards from the surface to and including an altitude of 3000 feet above the surface is designated as a High Density Traffic Zone, and the Washington National Airport is designated as a High Density Airport. Radio communication must be made with Washington National Airport control tower before commencing a take-off or landing at or entering, the traffic pattern of Washington National Airport, unless prior authorization from the Washington National Airport traffic control tower has been received by aircraft not equipped with functioning two-way radio.

Maximum speed within the zone is 180 mph or 160 knots indicated airspeed unless operational limitations for a particular aircraft require greater airspeeds, in which case the aircraft shall not be flown in excess of the minimum speed consistent with the safe operational limitations of the aircraft

Pilots should use every effort to maintain a continuous listening watch while within the zone so as to receive any pertinent air traffic information which may be transmitted and thus be alerted to avoid collision hazard within zone

---

TWO-WAY RADIO FAILURE: Under CAR 60.49 Radio Failure, pilots of IFR flights experiencing two-way radio failure are expected to adhere to the procedures prescribed on page 63 of the current Flight Information Manual under "Two-way Radio Failure," and "En Route Procedures."

However, if a pilot should become lost, or if other factors prevent the pilot from being able to comply with the provisions described on page 63, such pilots, as well as pilots of VFR flights, in the exercise of their emergency authority under CAR 60.2, may elect to attempt to alert civil or military radar systems by flying the appropriate pattern as described on page 49 of the current Flight Information Manual.

INTERFERENCE WITH SEARCH AND RESCUE OPERATIONS: Information received from air rescue units presents evidence that civilian pilots are interfering and, in some cases, jeopardizing aircraft engaged in rescue operations. Most of the instances are caused by pilots on sightseeing flights in the immediate area of an accident. Accordingly, the CAA Office of Flight Operations and Airworthiness strongly urges that pilots who are not engaged in the search and rescue operation refrain from conducting sightseeing flights at the scene of an accident while the rescue operations are being conducted.

MINIMUM EN ROUTE ALTITUDES: The following minimum en route IFR altitudes are amended as follows, effective September 26, 1957:

Section 610.15 Green Civil Airway 5 is amended to read in part:

✓RESTRICTED AREA AMENDMENT: The following Restricted Area Amendment shall become effective October 11, 1957:

(Part 608 - Restricted Area - Amendment 207)

(1) Section 608.39, the White Sands Restricted Area Number 1(formerly called White Sands Proving Grounds), New Mex., area (R-209 formerly D-209) amended Oct. 31, 1951 in 16 F.R. 11066, is redesignated as follows: Name and Location (chart): White Sands, New Mex. Restricted Area No 1 (R-209) (Roswell, Albuquerque); Description by Geographical Coordinates: beginning at lat 34-15-45, long. 106-40-30; thence to lat 34-17-00, long. 106-12-00; thence to lat 34-17-00, long. 106-04-00; thence to lat 32-50-00, long. 106-04-00; thence to lat 32-36-00, long. 106-06-00; thence to lat 32-25-00; long. 106-06-00; thence to lat 32-00-00, long. 106-21-00; thence to lat 32-00-00, long 106-34-00; thence to lat 32-18-00, long. 106-34-00; thence to lat 32-18-00, long. 106-39-00; thence to lat 33-13-00, long. 106-52-00; thence to point of beginning; Designated Altitudes: unlimited; Time of Designation: continuous; Controlling Agency: Holloman AFB, Alamogordo, New Mex.

(2) Section 608.39, the White Sands, New Mex., Restricted Area Number 2 (R-521) is added to read: Name and Location: White Sands, New Mex., Restricted Area No. 2 (R-521) (Roswell, Albuquerque); Description by Geographical Coordinates: That airspace W of White Sands Restricted Area No. 1 (R-209), described above, which is bounded by an arc of 33 and one half statute mi radius centered at N lat 33-46-45, W long. 106-46-00; Designated Altitudes: from 20,000 ft MSL to unlimited; Time of Designation: unlimited, except at such time as released to ARTC Center by Controlling Agency; Controlling Agency: Holloman AFB, Alamogordo, New Mex.

(3) Section 608.39, the White Sands, New Mex., Restricted Area Number 3 (R-522) is added to read: Name and Location (chart): White Sands, New Mex. Restricted Area No. 3 (R-522) (Roswell, Albuquerque); Description by Geographical Coordinates: beginning at lat 34-17-00, long. 106-04-00; thence to lat 34-17-00, long. 105-51-00; thence to lat 33-57-00, long. 105-27-00; thence to lat 32-45-00, long. 105-27-00; thence to lat 32-45-00, long. 105-59-00; thence to lat 32-36-00, long. 106-00-00; thence to lat 32-36-00, long. 106-06-00; thence to lat 32-50-00, long. 106-04-00; thence to point of beginning; Designated Altitudes: from 16,000' MSL to unlimited; Time of Designation: unlimited, except at such time as released to Albuquerque ARTC Center by Controlling Agency; Controlling Agency: Holloman AFB, Alamogordo, New Mexico.

(4) Section 608.62, the Dillingham, Territory of Hawaii, area (R-333) formerly Mokuleia, Territory of Hawaii, area amended April 27, 1956 in 21 F.R. 2719, is redesignated as follows: Name and Location (chart): Dillingham, Territory of Hawaii Restricted Area (R-333) (Hawaiian Islands); Description by Geographical Coordinates: beginning at lat 21-34-45, long. 158-17-20; thence to lat 21-35-20, long. 158-19-40; thence N and E along a line 3 s mi from the shoreline of Oahu to lat 21-37-50, long. 158-08-50; thence to lat 21-35-30, long. 158-11-30; thence to lat 21-35-15, long. 158-14-30; thence to point of beginning; Designated Altitudes: 40,000'MSL; Time of Designation: as published in NOTAMS (Firing Notices) during the hrs 0700-1700; Controlling Agency: Commanding General, USARPAC.

(5) Section 608.62, the Kaena Point, Territory of Hawaii, area (R-317) amended October 31, 1951 in 16 F.R. 11066, is rescinded.

✓ON REQUEST REPORTING POINTS: The following on-request reporting points are designated, cancelled or corrected, and shall become effective September 26, 1957:

DESIGNATED:

(1) GRAND PRAIRIE, TEX. (VHF) INTSXN - the intsxn of the 233°M radial of the Dallas, Tex. VOR and the 355°M radial of the Britton, Tex. VOR.

CANCELLED:

(1) NEWPORT, R. I. (VHF) INTSXN - the intsxn of the 085°T radial of the Riverhead, N. Y. VOR and the 252°T radial of the Nantucket, Mass. VOR and the 127°T radial of the Norwich Conn. VOR. (changed to compulsory)

(2) ROSSVILLE, TENN. (VHF) INTSXN - the intsxn of the SW crs of the Chattanooga, Tenn LFR and the 280°M radial of the Chattanooga, Tenn. VOR.

CORRECTED: (the following corrections are to Airguide Vol. 12, #12, page 35, dated 20 August 1957)

(1) Item 2 under Designated: disregard Anderson Int - should read: CLOVERPORT, TENN (VHF) INTSXN - the intsxn of the 061°M radial of the Memphis, Tenn. VOR and the 159°M radial of the Dyersburg, Tenn. VOR

(2) Item 27 under Designated: correct spelling should read: OUACHITA, ARK. (VHF) INTSXN - the intsxn of the 025°M radial of the Texarkana, VOR and the 244°M radial of the Cabot, Ark. TVOR.

(3) Item 28 under Designated: REEDSVILLE, PA. (VHF) INTSXN - the intsxn of the 287°M radial of the Tower City, Pa. VOR and the 320°M radial of the Harrisburg, Pa. VOR.

(4) Item 33 under Designated: SPRING HILLS, OHIO (VHF) INTSXN - the intsxn of the 110°M radial of the Sidney, Ohio VOR and the 064°M radial of the Dayton, Ohio VOR.

(5) Item 3 under Redesignated: BRIGHTWOOD, VA. (VHF) INTSXN - the intsxn of the 004°M radial of the Gordonsville, Va. VOR and the 061°M radial of the Montebello, Va. VOR.

(6) Item 6 under Redesignated: DECKER, IND. (VHF) INTSXN - the intsxn of the 229°M radial of the Scotland, Ind. VOR and the 010°M radial of the Evansville, Ind. VOR.

(7) Item 8 under Redesignated: FABIUS, N.Y. (VHF) INTSXN - the intsxn of the 023°M radial of the Binghamton, N.Y. VOR and the 162°M radial of the Syracuse, N.Y. VOR.

(8) Item 10 under Redesignated: GEORGETOWN, N.Y. (VHF) INTSXN - the intsxn of the 033°M radial of the Binghamton, N.Y. VOR and the 162°M radial of the Syracuse, N.Y. VOR

(9) Item 12 under Redesignated: HACKBERRY, ARIZ. (VHF) INTSXN - the intsxn of the 028°M radial of the Needles, Calif. VOR and the 288°M radial of the Prescott, Ariz. VOR.

(10) Item 16 under Redesignated: MIDDLEBURG, N.Y. (VHF) INTSXN - the intsxn of the 336°M radial of the Poughkeepsie, N.Y. VOR and the 268°M radial of the Albany, N.Y. VOR.

(11) Item 17 under Redesignated: MISSION, VA. (VHF) INTSXN - the intsxn of the 307°M radial of the Gordonsville, Va. VOR and the 061°M radial of the Montebello, Va. VOR.

(12) Item 26 under Designated: PEACOCK, ARIZ. (VHF) INTSXN - the intsxn of the 044°M radial of the Needles, Calif. VOR and the 288°M radial of the Prescott, Ariz. VOR.

RADIO INTERFERENCE (General): You can do your part toward reducing radio interference to aeronautical services from non-aeronautical sources which may be noted during flight if such is reported promptly to a CAA facility (preferably after landing) or to any FCC field office. Reports should state the frequency or channel affected, description of the interference, and the geographical area where the interference was observed. If known, reports should give the apparent cause of the interference such as radio stations, call letters when such can be identified, industrial plants, diathermy machines, power lines, television receivers, etc. Do not report interference caused by normal frequency congestion, i.e., signals from other aircraft using the frequency."

IDENTIFICATION OF AIRCRAFT: Pilots are requested to exercise care that the identification of their aircraft is clearly transmitted in each contact with an ATC facility. Also, pilots should be certain that their aircraft are clearly identified in ATC transmissions before taking action on an ATC clearance. Garbled aircraft identifications in radiotelephone transmissions should never be taken for granted but should always be checked.

ALTIMETER SETTING SERVICE - AIR ROUTE TRAFFIC CONTROL CENTERS:

The following governs issuance of altimeter settings by Air Route Traffic Control Centers to aircraft operating on an IFR flight plan and in direct communication with the Center:

1. Altimeter settings will be furnished, when requested by a pilot operating on an IFR flight plan, for those weather reporting stations within the center's control area.

2. Requests for altimeter settings at weather reporting stations not within the center's control area will be referred to the appropriate Air Traffic Communications Station.

3. The time and location of the weather station reporting the altimeter setting will be specified. The following phraseology will be used: The (Time) (Station Location) Altimeter (Setting) Example: "The One Four Three Zero Columbus Altimeter Three Zero Zero Two."

HOLDING PATTERNS: The following holding patterns have been designated, redesignated or cancelled, and shall become effective September 26, 1957:

DESIGNATED:

(1) BIG SPRING, TEX. (VOR) - direction of holding - N on 360°M radial; direction of turns - left; time - 2 mins; min alt 3700'.

(2) OCEANSIDE, CALIF. (Rbn) - direction of holding - NW on 121°M inbnd brng (301°M outbnd); direction of turns - right; time - 1 min; min alt 4000'.

(3) SURF, CALIF. (LF) INTSXN - direction of holding - N on N crs of the San Diego, Calif. LFR; direction of turns - right; time - 2 mins; min alt 3000'.

(4) LA JOLLA, CALIF. (LF) INTSXN - direction of holding - N on N crs of the San Diego Calif. LFR; direction of turns - right; time - 2 mins; min alt 2500'.

(5) LEMON GROVE CALIF. (LF) INTSXN - direction of holding - E on E crs of the San Diego, Calif. LFR; direction of turns - right; time - 1 min; min alt 4500'.

(6) JAMUL, CALIF. (Rbn) - direction of holding - E on E crs of the San Diego, Calif. LFR; direction of turns - left; time - 1 min; min alt 6000'.

(7) OCEANSIDE, CALIF. (VOR) - direction of holding - NW on 301°M radial; direction of turns - right; time - 1 min; min alt 4000'.

(8) OCEANSIDE, CALIF. (VOR) - direction of holding - W on 265°M radial; direction of turns - right; time - 1 min; min alt 3000'.

(9) SURF, CALIF. (VHF) INTSXN - direction of holding - N on 325°M radial of the San Diego, Calif. VOR; direction of turns - right; time - 2 mins; min alt 3000'.

(10) LA JOLLA, CALIF. (VHF) INTSXN - direction of holding - N on 325°M radial of the San Diego, Calif. VOR; direction of turns - right; time - 2 mins; min alt 2500'.

(11) WILLOW, ALASKA, (LF) INTSXN - direction of holding - S on 152°M inbnd bearing (332°M outbnd) Anchorage, Alaska LFR; direction of turns - left; time - 2 mins; min alt 2500'.

REDESIGNATED:

(1) DELTA ISLAND, ALASKA (LF) INTSXN - direction of holding - SW on NE crs Kenai, Alaska LFR; direction of turns - left; time - 2 mins.

(2) SUSITNA, ALASKA (LF) INTSXN - direction of holding NE on NE crs Kenai, Alaska LFR; direction fof turns - right; time - 1 min; min alt 2500'.

CANCELLED:

(1) WILLOW, ALASKA (LF) INTSXN - direction of holding - N on 152°M inbnd bearnig (332°M outbnd) Anchorage, Alaska LFR; direction of turns - right; time - 2 mins; min alt 2500'

(2) SUSITNA, ALASKA (LF) INTSXN - direction of holding - SE on NW crs Anchorage, Alaska LFR; direction of turns - right; time - 1 min; min alt 1500'.

LOCATION IDENTIFIERS: The following changes affect the use of the location identifiers:

FME	Fort Meade, Md., Meade AAF	(assignment)
NPI	Port Isabel, Tex., NAAS	(assignment)
4BF	Bonners Ferry, Idaho, REP	(assignment)
BW	Bridgewater, N. S.	(assignment)
DJ	Cap des Rosiers, Que.	(assignment)
DW	Riviere du Loup, Que.	(assignment)
FH	Heath Point, Anticoati Island, Que.	(assignment)
FJ	Ocean Falls, B. C.	(assignment)

IY	Sullivan Bay, B.C.	(assignment)
IZ	Puntzi Lake, B. C.	(assignment)
NF	Lac la Ronge, Sask.	(assignment)
NJ	Shelburne, N. S.	(assignment)
NW	New Carlisle, N. S.	(assignment)
NY	Langley, B. C.	(assignment)
RF	Ross Bay, Newfoundland	(assignment)
SP	Point St. Peter, Que.	(assignment)
UW	Mid-Baffin, N. W. T.	(assignment)
UX	Hall Lake, N. W. T.	(assignment)
UZ	Cape Hooper, N. W. T.	(assignment)
WZ	Lake of Two Rivers, Ont.	(assignment)

ON TOP IFR OPERATIONS: Effective September 15, 1957, the phraseology, "at least 1000 on top", is changed to "VFR conditions on top." Pilots proposing IFR operation on top in lieu of a specific altitude should specify "VFR conditions on top" in filing an IFR flight plan. Operational requirements for operating at least 1000 on top continue to apply for operations in VFR conditions on top.

AERONAUTICAL CHARTS OF THE U. S. COAST AND GEODETIC SURVEY

New editions of the charts listed below will be published in about one month making former prints obsolete for use in aviation. Orders for these particular charts should be kept to a minimum until new edition is printed.

Dallas New Orleans San Antonio WAC 137 WAC 409

NEW EDITIONS

A new edition or new chart for the charts listed below is now available for use. Former prints should be destroyed or stamped "OBSOLETE FOR USE IN AVIATION."

SIMULTANEOUS VOICE TRANSMISSIONS FROM A SINGLE LOCATION: At several CAA facilities, simultaneous voice transmissions are made from a single location. For example, the New York ATCS controls the transmitters at Idlewild, LaGuardia, Newark, Colts Neck, Caldwell and Wilton L/MF or VOR facilities.

To provide a uniformly brief announcement, generally for broadcast purposes, the name of the controlling facility, followed by the word AREA will be used, e.g., THIS IS NEW YORK AREA RADIO, etc.

Calls from aircraft will be answered using the name of the station as stated by the pilot, e.g., a pilot calling "Newark Radio" will be answered by the New York ATCS, "THIS IS NEWARK RADIO, etc."

The word "AREA" signifies that the transmission from the named (controlling) location is emanating simultaneously from one or more remotely controlled facilities, having a different name or names, as indicated in the ANRA Section of the AIRGI and/or applicable RF Charts.

A NOTAM will be issued from those facilities affected by the foregoing when the change to this procedure is made.

AIRPORT AND RADIO NOTICES

LEGEND

(3-31) Month and day item was reported.

** New or revised airport, caution area or miscellaneous data. Pilots should inscribe this information on charts and records.

* New or revised radio data. Pilots should inscribe this information on charts and records.

NOTE: Because of space limitations, such data usually are cited only once.

ALABAMA: ANNISTON-RADIO: VOR courses 360°-07° have bends and roughness out of tolerance. (12-1)

AUBURN-OPELIKA ARPT: Lgt g facs inop. (7-6)

BESSEMER-DURHAM ARPT: Caution -auto drag strip runs parallel to sod landing strip with separation of 50'. Auto racing is NOT done on rnwy. Drag strip ends are mrkd. Racing is done on Sun only. (9-28)

BIRMINGHAM-RADIO: VOR operg test basis only, at lat 33-40-11, long. 86-53-58, about 10 n mi NW Birmingham Mun arpt. (12-14) Caution- all arwys and Ints based on Birmingham or Meridian VORs are not usable for navigational purposes until the stns are re-cmsnd at new lctns. (4-18) Until cmsng VOR, V7E temp designated BHM LFR to Tanner Int. via ADF track of 350° mag from BHM LFR, MEA 4500'. (8-27)

BIRMINGHAM ARPT-TOWER: Aug 7, ILS MM and LMM shut down-relocation. (8-7)

** FLD: Operg 2-way rdo rqrd day and night. (8-26) Caution-tfc operg in area from 165° clockwise thru 235° not visible from twr to dist of 4 s mi. Rnwy 8-26 perm clsd to high performance single engine conventional lndg gear type acft, including T-6. Rnwy 18-36 clsd between 0800-1700 daily unless otherwise advised by ctl twr. (7-9) Acft requiring after-burners prohibited use of arpt. Exten const work in progress SW end NE/SW rnwy. ILS apch lgt lane shut down until approx thru Nov for relctn due rnwy ext. (5-1)

EVERGREEN-RADIO: VOR radials 320° thru N unusable acct severe scalloping and bends.

EVERGREEN-MIDDLETON ARPT, 20, MSY-ATL; Rnwy and threshold lgts inop. (2-6)

HUNTSVILLE-RADIO: VOR radials 005°-030° have roughness and bends out of tolerance.

* HUNTSVILLE ARPT-TOWER: Trans & rcvr 346.8 mc changed to 348.6 mc. (8-19)

MOBILE-RADIO: June 19, VOR arwy radials flight-checked. Radial 018°-028° out of tolerance due to severe scalloping. (6-19)

MOBILE-BATES FLD-TOWER: June 19, ILS not to be used for automatic apch below 300'. Glide slope inop-equip. and const vcnty transmitter bldg. (8-22) FLD: Due space shortage, all transient and lcl acft not permitted parking space on admin bldg ramp xcpt enplaning and deplaning passengers. Use facs E side of fld. (11-10) Unlgtd trees penetrate apch zone to all rnwys. Use caution. 200' and 1/2 mi is absolute tk-off min for all acft.

MONTGOMERY-SPECIAL NOTICE: All acft operg in the Maxwell AFB and Dannelly Fld ctl zones are cautioned to maintain cont rdo ctc with the appropriate ctl twr. Exten flying of both conventional and jet type acft in progress at both arpts. (4-19)

MONTGOMERY-DANNELLY FLD-TOWER: About Sept. 9, trans & rcvr 119.7 mc will be cmsnd and trans & rcvr 119.5 will be decmsnd. (8-28) FLD: Dips in E/W rnwy 1500' from E end. Lgtd ditch approx. 200' NE of apch end of rnwy 21. Twr unable to ctl taxiing acft on E/W taxiway from a point adj to ANG hangar to W end. Use caution taxiing.

MUSCLE SHOALS-RADIO: VOR courses 020°-050°, 110°-150° and 285°-335° clockwise from stn out of tolerance beyond 15 n mi acct scalloping and bends. (11-2)

ARIZONA: AJO ARPT: Beacon and lights inoperative. (6-18)

CLEMENCEAU-COTTONWOOD-CLEMENCEAU ARPT: All servicing temp suspended. Fld open days only. Rnwy avail. ngts upon prior req. Emergency only. (4-23)

COCHISE-RADIO: VOR/DME coverage 015°-045°, 30 n mi; 090°-110°, 40 n mi; 190°-215°, 35 n mi; 215°-235°, 30 n mi; 235°-255°, 35 n mi at MEA.

FT. HUACHUCA-SPECIAL NOTICE: Caution-extensive artillery firing and drone flying in immediate vicinity. Two-way rdo and prior clearance from Libby AAF twr required before flight within R-181. Libby twr gds: 121.5, 122.5, 126.3, 126.18, 243.0 mc. Rdo bcn(FHU 410 kc) and TVORW(FHU 111.6 mc) only rdo aids to air nav suitable for normal use. Other experimental rdo nav aids oper from time to time not suitable for use under any circumstances. Army Electronic Proving Ground reports that on several occasions, civil acft have been endangered by failure to observe the requirements listed. (4-19)

ARIZONA: GILA BEND-RADIO:. VOR has slow bends and scalloping starting at 17 n mi and 8000' MSL on 247° radial beyond tolerance. (6-24)

GLEN CANYON DAM SITE-SPECIAL NOTICE: Pilots should not fly below canyon rim. Cables strung across canyon. (11-1)

GRAND CANYON-SPECIAL NOTICE: Pilots should not fly below rim of canyon. Cable not readily visible to acft strung across canyon lctd near Quartermaster Point in Lower Granite Gorge between Pierce Ferry and Spencer Canyon. (1-2)

**KINGMAN ARPT: Fld lgts activated for 25 mins by 3 pulses of mike button on 121.7 mc when within 10 mi radius. (7-17)

PHOENIX AREA-SPECIAL AIR TRAFFIC RULES: Aircraft operg under VFR or VFR conditions shall not be operd Mon thru Fri from 0600M to 1800M on Green Arwy #5 and Victor Arwy 16 W of Phoenix in the areas described below except at the altitudes prescribed therefor unless special permission is obtained from Air Traffic Control. From 112°28' to 112°35', which is the area between north-south lines drawn thru the Perryville FM and the town of Buckeye, between 700' above the surface and 5000'MSL, regardless of weather conditions. Further, when the reported ceiling at Phoenix is less than 8000', acft shall not be operd at alts above 2000' MSL and below 4000' MSL in the area between 112°16' and 112°28', which is the area between north-south lines drawn thru the town of Tolleson and Perryville FM. When the reported ceiling at Phoenix is 8000' or more, acft shall not be operd at alts above 7000' MSL and below 9000' MSL in the area between 112°10' and 112°28', which is the area between north-south lines drawn thru the town of Tolleson and the east edge of Glendale and the Perryville FM. (8-15)

PHOENIX-SKY HARBOR ARPT-SPECIAL NOTICE: Following changes in instrument apch procedures: LFR procedure: Initial approach from Perryville FM 4000, from Tolleson Int. 2600. Missed apch: Climb to 2500 on W course PHX LFR, make right climbing turn returning to LFR. Hold on E course LFR at 5000' in standard pattern within 15 mi. VOR procedure: Initial approach from Perryville FM 4000, from Tolleson Int 2600. Missed approach: Climb to 2500 on radial 258, make a right climbing turn, returning to VOR. Hold east of VOR on radial 076 at 5000 in standard pattern within 15 mi. Tolleson Int - Int GBN VOR radial 027 and PHX VOR radial 258 or W course PHX LFR. All other items these procedures unchanged. (6-14)

**PHOENIX-SKY HARBOR ARPT: Clsd to mil F-89 type acft or acft rqrg use of after burners for tk-off, xcpt prior permission arpt manager. (12-7) Functioning 2-way rdo rqrd. Men & equip. along N edge rnwy 26L from apch end to a point approx 2000' W. (8-23)

PRESCOTT-RADIO: VOR coverage 185°-225°, 35 n mi at 10,000'; 135°-145°, and 165°-185°, 39 n mi at 10,000'.

**SALOME ARPT, 27B, LAX-PHX: Caution - puncture vines. (6-18)

SAN SIMON-RADIO: VOR coverage 030°-070°, 30 n mi; 160°-260°, 30 n mi. (7-17)

SCOTTSDALE-THUNDERBIRD #2 ARPT: Clsd. (3-26)

TUCSON-RADIO: VOR/DME coverage: 360°-050°, 35 n mi 11,000';050°-060°, 22 n mi 11,000';060°-075°, 35 n mi 11,000';075°-085°, 21 n mi 11,000';090°-170°, 40 n mi 12,000';225°-230°, 40 n mi 7,000';330°-345°, 35 n mi 11,000';345°-360°, 25 n mi 11,000'.

TUCSON ARPT-SPECIAL NOTICE: As required, target towing on a direct route off arwy to Ajo, Ariz to be conducted wk-ends- caution. (2-15)

TUCSON-DAVIS MONTHAN AFB-RADIO: USAF UHF/DF steers unreliable beyond 35 mi at or below the following alt: (a) NW quad 10,000'; (b) SW quad 10,000'; (c) SE quad 12,000'; (d) NE quad 13,000'. (6-20)

YUMA-RADIO: VOR coverage 280°-300°, 30 n mi at MEA. (5-18)

YUMA-VINCENT AFB: All acft not equipped with 2-way rdo are advised to use extreme caution while operg within a 5 mi radius of arpt due to heavy jet tfc. B-57 type acft towing 10,000' of cable and tow target in vcnty. All acft refrain from flying in close proximity of B-57 type acft in Yuma area. (2-11)

ARKANSAS: BLYTHEVILLE-SPECIAL NOTICE: All acft operg under VFR adj to Blytheville AFB are advised to use extreme caution due to extensive IFR jet tfc. (7-18)

**CAMDEN-HARRELL FLD: WNW/ESE rnwy perm closed. (8-12)

**JONESBORO ARPT: 250' AGL lgtd twr erected 7 n mi SE(140°T) at lat 35-44-30, long. 90-33-06. (8-23)

PINE BLUFF-RADIO: VOR shut down until approx Sept 15. During shutdown, VOR flgts. authorized to use PBF homing fac in lieu VOR xcpt V-16S TXK to PBF unusable. Ints and alts as charted. (8-30)

TEXARKANA-RADIO: DME coverage 145°-235°, 1700'MSL 30 n mi; 235°-270°, 1800'MSL 35 n mi. (5-21)

CALIFORNIA: APPLE VALLEY ARPT: Caution - const - men and equip. on field. (4-26)

CALIFORNIA: ARCATA-RADIO: VHF/DF coverage 40 n mi at MEA excpt 030° -040°, 11,000' 040°-060°, 12,000'; 060°-090°, 13,500'. Operg test-basis. This corrects AIRGI Vol.12,No.12.
BASS LAKE-WISHON ARPT: Clsd to all operns until further notice. (8-23)
BECKWOURTH-PLUMAS CO. ARPT: Clsd due rnwy resurfacing. (6-24)
BLYTHE-RADIO: VOR/DME coverage 45 n mi except 25 n mi 180°-200°; 30 n mi 280°-300°; 20 n mi 300°-320°; 35 n mi 345°-015° at MEA. (8-20)
BONSALL-SHEARER'S RANCH ARPT: Abandoned until further notice. (2-4)
BRAWLEY ARPT: Rnwy 12-30 clsd. Use parallel dirt rnwy. (7-26)
✱BURBANK-LOCKHEED AIR TERMINAL-TOWER: Aug 16, ILS glide slope angle changed to 3°. Cross OM at 4600' MSL.
CAMARILLO-RADIO: All courses have multiples. (6-17)
CRESCENT CITY-RADIO: VOR arwy radials flgt-checked. Courses 90°-330° usable dist 22 n mi; 350°-90°, 26 n mi at 7000'; 43 n mi at 8000'.
DAGGETT-RADIO: VOR flgt-checked on arwy radials only.
DINUBA-ALTA ARPT: Arpt unlgtd. (4-22)
DIXON ARPT: Closed. (8-30)
EL MONTE-EL MONTE-L.A.ARPT: 2500' rnwy clsd during Aug. (7-25)
ELSINORE ARPT: Caution-glider activity week ends. Squirrel holes S edge of lndg area.
FAIRFIELD-TRAVIS AFB-RADIO: LF rng has splits and multiples beyond 20 mi. (8-27)
FILLMORE-RADIO: VOR coverage 320°-355°, 35 n mi at 11,000'; 280°-320°, 26 n mi at 11,000'.
FT. JONES-RADIO: VOR has lgt course roughness all quads. Only arwy radials flgt-checked. About Sept. 19, VOR will be shut down until approx Oct 17 - modernization. Durg this period the following arwys will be unusable for IFR opern: V23 Red Bluff -Talent Int.; V23E Fort Jones - Klamath Junction Int. The Bray Int. will be unusable.(8-7)
FORTUNA-RADIO: VOR has lgt to moderate scalloping beyond 26 n mi. Only arwy radials flgt-checked. (10-6) DME coverage 335°-350°, 43 n mi at 3000'; 350°-10°, 43 n mi at 8000'; 10°-30°, 43 n mi at 9000'; 30°-120°, 35 n mi at 9000'; 120°-150°, 35 n mi at 6500'; 150°-335°, over water, not checked.
FRANKLIN ARPT: Rnwy 15-33 clsd. (7-12)
FRESNO AIR TERMINAL-TOWER: About Sept 9,ILS glide slope will be shut down until approx Oct 9-relctn.(9-2) FLD: Extreme caution advised in vicinity of arpt, particularly when using VOR arwys. Jet acft climbing & descending in areas of extended centerlines rnwys 29-11 and areas N and E of arpt. Const & equip both ends rnwy 29-11 & adj taxiways.
✱GLENDALE-GRAND CENTRAL ARPT-TOWER: Effect. Aug 26, twr hrs opern 0700-1530,
** Mon-Fri. (8-22) FLD: NW/SE taxi strips southwest side of field permanently closed. Exten. construction in progress. Field closed to all aircraft at sunset. (10-5)
LONG BEACH-RADIO: DME coverage 43 n mi as follows: 280°-305°, 5000'; 305°-340°, 7000';340°-040°, 12,000';040°-070°, 8000';070°-100°, 7000';100°-280°, 4000'. (9-13)
LONG BEACH ARPT-TOWER: ILS glide slope subject to indef shutdown periods during arpt const.(8-18) VHF/DF bearings unreliable below 12,000' MSL SW quad between 200° and 230° true. (5-6) FLD: Several 230' MSL portable oil derricks NW, W, & S of fld. No fuel servicing avail .for civil acft 2400-0600. Neon apch lgt lane rnwy 30 discontd indefinitely. (1-1) Caution - temp p-line with wooden poles 29' high serving const camp erected approx 315' S of and roughly parallel to apch end rnwy 30 for 800'. (3-22) Rnwy 30 clsd all lndgs 0700-1500P wk-days only due 100' booms in apch area. First 800' rnwy 30 adj taxiways clsd const; 6200' avail. lndgs and tk-offs. Rnwy 12 clsd. Until further notice, straight-in ILS lndg min rnwy 30 daylgt hrs only - 500'/1 mi. (6-25)
LOS ANGELES-RADIO-SPECIAL NOTICE: Transcribed wea bdcasts shut down - modernization. Manual bdcast continues on VOR and both VOR & LF combined. (4-26)
LOS ANGELES-RADIO: VOR coverage 275°-315°, 30 n mi at min en route alt. Light to moderate scalloping below 3000' MSL. (10-23) LF rng shut down - conversion to H fac, with voice. Freq & ident remain the same. Voice controlled by ATCS. (7-19) The following arwys will be unusable durg shutdown LF rng: Amber 1 BUR-LGB, Amber 6 CAV-LAX, Green 5 LAX-RIV, Red 65 OCN-LAX. The following LF reporting points will also be unusable: Avalon, San Pedro, Malibu and La Havra. (7-30) Concurrent with cmsng of H fac the idents of following FM's will be: Hollywood Hills & Downey-dot dash; La Habra-dash dot. (8-13)
✱LOS ANGELES INTERNATIONAL ARPT-TOWER: VHF/DF unreliable 045°-060° below 13,000' MSL beyond 30 n mi.(4-19) VHF/DF rcvs: 119.9, 120.3, 121.5, 122.1, 124.5, 125.1, 125.9, 126.18, 132.0, 135.9 mcs. (8-15) FLD: Use paved areas only. New lgtd rnwy 16-34 approx 4000' W of Sepulveda Blvd clsd - avail 30-min req thru twr. Equip. crossing rnwy. During VFR wea conditions, civil acft ctc twr on 118.9 mc or listen 118.9 mc, trans 122.7 mc at least 10 mi out. During IFR wea, civil acft ctc Apch Ctl on 118.1 or 119.3, or listen 118.1 or 119.3 mc and trans 122.7 mc. USAF-NAVY-CG: VHF equipped acft ctc Apch Ctl on 118.1 or 119.3 mc. UHF equipped acft ctc Apch Ctl on 250.2 or 269.0 mc. Pilots are urged to use extreme caution when operg off-shore W of arpt. All jet acft departing rnwys 25L-25R climbing in VFR conditions use a 200° departure corridor which originates at a max of 3000' MSL, approx intsxn of extended centerlines of above rnwys with the shoreline. Acft proceeding E-bound from Malibu or Pt.Dume intsxns in VFR conditions making a track which approx extended centerlines of above rnwys are cautioned not to descend below 4000' MSL until passing shoreline or Los Angeles Omni, unless cleared otherwise by ATC. Jet acft pat downwind leg is 1500' MSL. Acft not intending lndg at arpt should avoid apch areas to W of arpt and E of arpt between Downey rbn and arpt below 3000' in VFR wea. If desiring to cross apch area below 3000' ctc Los Angeles Apch Ctl before crossing. Recommended cross tfc plan crossing crs at 3000' or above ceiling permitting, directly over arpt or between LFR and arpt. Avoid shoreline W due hi-performance jet acft. Due non-visibility twr unable ctl tfc last 2400' rnwy 34. Nov 30, transmissometer cmsnd, furnishing rnwy visibility for rnwys 25L and 25R. Visibility to be added to observations when prevailing visibility is less than 1-1/2 mi. Hi-intensity apch lgts rnwy 25L converted to centerline system extending 3000'E of rnwy pavement.(6-21) Apch lgt lane sequenced flashers avail. on test basis at pilot's request. Flashers extend 1200'-3000' from end rnwy 25L.(7-11)
LUCERNE VALLEY-DOUBLE J RCH ARPT: Length of strip reported increased to 3000'.
MENDOTA ARPT: New arpt reported: Lctd 1/4 mi E; elev 174'; 1 rnwy - (15-33) - 2300' x 90' (dirt & sand compact); remarks - 6' fence at each end. (7-23)
MOFFETT FIELD - SPECIAL NOTICE: Due to hvy jet tfc, acft operg vicinity Moffett Fld ctl zone in VFR wea exercise extreme caution passing thru ctl zone at alts below 2000' VFR and below 4000' during stratus conditions. (6-17)
MONTEREY-PENINSULA ARPT-RADIO: Soon, ILS will be cmsnd. Lclzr freq: 110.1 mc, ident: MRY. Lctd 1000' SE on a centerline of NW/SE rnwy. Glide slope freq: 334.4 mc. Lctd 825' from apch end NW/SE rnwy and 236' N of centerline of rnwy. Glide angle 3.0°. Apch bear.: 84°. LMM freq: 260 kc, ident: RY. MM lctd 0.60 mi from apch end rnwy. LOM freq: 278 kc, ident: MR. OM lctd 5.14 mi from apch end rnwy. Disregard spurious signals.
OAKLAND-SPECIAL NOTICE: Pilots proposing transbay flgt should ascertain that VFR wea exists within both San Francisco and Oakland Control Zones, or should obtain ATC clearance for flgt within a ctl zone when wea is less than VFR, since ceiling and visibility mid-bay is frequently less than at the two terminals. Rotating beam ceilometer in operation. Hereafter ceiling obstructions of less than 1500' will usually pertain to the middle marker location. Tfc operg in VFR wea should avoid vcnty of Alameda NAS. Extensive tfc including jets operate in tfc pat up to 2000' within a radius of 1.7 n mi of fld. Exercise extreme caution in these areas.
OAKLAND-RADIO-SPECIAL NOTICE: Military acft planning to use VHF communications and proposing IFR flight into Oakland, Alameda NAS or Hayward should contact Oakland Approach Control on 118.1 mc, or proposing IFR flight into San Francisco should contact San Francisco Approach Control on 118.5 mc. Communications during IFR flight should not be conducted with Oakland Approach Control or San Francisco Approach Control utilizing the freq 126.18 mc unless 118.1 or 118.5 mc is not avail. Due to extreme congestion, 126.18 mc is not considered a suitable communications channel for IFR flight into Oakland, Alameda NAS, Hayward or San Francisco. (7-18)
OAKLAND-RADIO: VOR coverage 35 n mi N thru E at min instr alt. (1-14) DME coverage 30°-60°, 26 n mi at 5000'; 60°-80°, 35 n mi at 5000'; 280°-290°, 35 n mi at 4000'; 340°-350°, 35 n mi at 6000';350°-030°, 17 n mi at 4000'.
OAKLAND-AIR ROUTE TRAFFIC CONTROL CENTER-SPECIAL NOTICE: Jet approaches and lndgs at Oakland, San Francisco and Sacramento, as depicted on apch plates JAL-294-RNG, JAL-375-RNG and JAL-358-ADF, are to be used for emerg only. (4-24)
OAKLAND-METROPOLITAN-OAKLAND INTNL ARPT-TOWER: VHF/DF coverage 40 n mi at MEA xcpt 340°-030°, 6500'; 030°-040°, 8000'; 040°-060°, 7000' MSL. (8-6) FLD: Dredging and clam shell equip working S of lndg area. All booms and equip lgtd and mrkd. Use extreme caution when flying over or within this aree. Non-rdo acft rqrd to req permission from twr foreclearance; make left hand pat before lndg. (10-30) Transmissometer cmsnd giving rnwy visibility observations rnwys 27 L & R. (8-22)
OCEANSIDE-RADIO: July 10, VOR shut down until approx Oct 1 - modernization. Durg this period the following arwys will be affected: V23 LGB-SAN; V208 CAX-TRM when usable. Flgts departing LAX via V208 will be cleared from intsxn LAC VOR radial 170 and LGB VOR radial 205 direct to Avalon LF Int. R65 to OCN during shutdown period. (7-9)

CALIFORNIA: ONTARIO-RADIO: VOR/DME coverage 135°-150°, 26 n mi at 7000'; 150°-200°, 17 n mi at 7000'; 200°-280°, 35 n mi at 7000'; 330°-350°, 26 n mi at 13,000'; 350°-360°, 35 n mi at 13,000'. (7-30)

ONTARIO INTNL ARPT: Acft not lndg at arpt should avoid apch and depart areas E and W below 3000' MSL in VFR wea. Twr tfc operg in E quad should exervise ctn acct exten simulated IFR apchs including jets VFR wea and actual apchs IFR wea. (3-13) Make turns on or off taxiway S side rnwy 7-25 at intsxns only. Eng run-ups in take-off position rnwy 7-25 prohibited less than 200' from ends of rnwy as marked by yellow paint lines either side. Formation take-offs and lndgs prohibited xcpt ANG 196th Fighter Interceptor acft. Due to non-visibility twr unable to ctl tfc on ANG ramp and taxiway leading to ANG hangar area.

PALMDALE-RADIO: VOR coverage 120°-150°, 35 n mi at 10,000'; 150°-180°, 35 n mi at 9000'. (3-14)

PASO ROBLES-RADIO: DME coverage 220°-235°, 35 n mi at 6000'; 235°-245°, 26 n mi at 6000'; 245°-270°, 35 n mi at 6000'. (7-5)

POMONA-BRACKETT FLD: Operative during reconstruction. Caution - men and equip.

RED BLUFF-RADIO: DME coverage 225°-245°, 35 n mi at 10,000'. (6-30)

SACRAMENTO ARPT: Twr tfc operg in SW quad should exercise caution acct extensive simulated instr apchs including jetc VFR weather, actual apchs IFR weather. (4-2)

SALINAS-RADIO: VOR coverage 20°-95° and 135°-295°, 35 n mi at min instr alt. DME coverage 20°-44°, 26 n mi at 7000'; 44°-49°, 17 n mi at 7000'; 49°-90°, 26 n mi at 7000'; 90°-130°, 43 n mi at 7000'; 130°-145°, 26 n mi at 7000'; 145°-153°, 17 n mi at 7000'; 153°-180°, 26 n mi at 7000'; 180°-225°, 43 n mi at 7000'; 225°-300°, 43 n mi at 5000'; 300°-20°, 43 n mi at 7000'.

SAN DIEGO-RADIO: VOR coverage 50 mi MEA all quads xcpt 20 mi MEA from 310° to 330°.

SAN DIEGO-LINDBERGH FLD: 500' W end rnwy 9-27 clsd - jet barrier. (2-29) Until about Aug 29, men & equip. working on rnwy 9-27. (7-12)

SAN FRANCISCO: See Oakland Control Zone Notam.

SAN FRANCISCO-RADIO-SPECIAL NOTICE: Acft not on IFR flgt plan and not desiring IFR apch, requested to make initial call to San Francisco Twr, freq 119.1 mc. (7-25)

SAN FRANCISCO INTNL ARPT: Men and equip. working turf areas adj concourses B and D. All acft and equip. should be parked 20' or more from existing W edge of paved area concourse B and existing S edge of paved area concourse D. Mrkd day and ngt. (3-26) Section of deactivated rnwy 18-36 between taxiway C and rnwy 10L-28R clsd perm. (5-18) Do not use for taxiing painted green line 1100' long which connects centerline of W end of rnwy 28R-10L with taxiway A then veers N across adjoining run-up mat toward turf. This is a temp experimental hi-speed exit taxi line. (6-13) Taxiway E from S edge of rnwy 28R-10L to taxiway A clsd. Taxiway B from taxiway D to taxiway G clsd. Taxiway F from W edge of rnwy 1L-19R to taxiway A clsd. Men and equip. operg turf areas between taxiways A & B S of term ramp area and S end of rnwys 1L-19R and 1R-19L. (8-26)

SAN FRANCISCO GAP-RADIO: Homing fac unreliable in area 25° thru E to 130°. (11-15)

SAN RAFAEL-SAN FRANCISCO BAY ARPT: Caution - 60' crane and trucks operg daylight hrs W end rnwy. (5-17)

SANTA BARBARA-RADIO: DME coverage 325°-30°, 26 n mi at 9000'; 30°-45°, 35 n mi at 9000'; 80°-95°, 35 n mi at 4000'; 110°-260°, not checked. (10-23)

**SANTA MARIA-HANCOCK ARPT: No services. Unattended. (7-26)

SANTA MONICA-RADIO: TVOR radials 030°, 075°, 210°, 260° and 323° usable. (1-20)

SANTA MONICA ARPT: Service avail. only between 0700-2100 daily. Extreme caution advised during ngt use of fld due to unlgtd open storm drain ditch 175' from S edge of main rnwy. An unlgtd unmrkd difference in elev variable to as much as 25' exists between the open storm drain ditch and taxiway. All taxiways unlgtd. (1-20)

SANTA PAULA ARPT: Work in progress S side of fld. Caution - trucks immediately S of rnwy. Area S of rnwy soft, muddy. (6-8)

SHOSHONE ARPT: Until about Sept. 9, strip clsd for paving. (8-9)

STOCKTON ARPT-TOWER: About Sept. 5, CAA twr will be cmsnd. Trans : 278 kc; 118.7, 121.5, 126.18 mcs. Rcvs: 3023.5 kc; 118.7, 121.5, 122.5, 126.18 mcs. Trans & rcvs 121.9 mcs for mobile gnd traffic. Class: C(g). (8-29) FLD: Rnwys 11L-29R, 11R-29L, and 16-34 clsd due exten const work in progress. Rnwy 4-22 only avail. with temp flare pot lgtg. Tetrahedron tied down to indicate active rnwy. Pilots should observe windsock for crosswind indication. Hvy equip. crossing SW end rnwy 4-22. Flagman on duty directing gnd tfc. Extreme caution advised at all times. Intensive helicopter training conducted in vicinity of fld between 0800-1700 daily xcpt Sat and Sun. Acft utilizing SCK rdo rng for simulated range apchs should exercise extreme caution. Min alt for low apchs is 528' MSL. (8-12)

CALIFORNIA: THERMAL-RADIO: VOR and DME coverage 330° thru 360° to 060°, 20 n mi; 060°-085°, 40 n mi; 145°-175°, 40 n mi; 175° thru 180° to 250°, 20 n mi; 250°-280°, 40 n mi at min en route alt. (3-14)

THERMAL ARPT: Use rnwys and taxiways only. Blacktop shoulder areas soft. (2-28)

UKIAH-RADIO: DME coverage 43 n mi; 305°-355°, at 6500' MSL; 355°-60° at 9000'; 60°-100° at 7000'; 100°-150° at 6000'. 105° thru S and W to 305° over water not checked.

UKIAH ARPT: Dirt strip perm clsd. Use surfaced rnwy 15-33 only. (7-9)

VAN NUYS ARPT: Touch-and-go lndgs prohibited on Sat and Sun after 1300. Jet acft make initial apch at 4000' MSL when lndg on rnwy 34; 2300' MSL when lndg on rnwy 16. Tfc direction indicator inop 2300-0700. (2-25)

VICTORVILLE-GEORGE AFB-RADIO: USAF VHF/DF steers unreliable 235°-325° and 360°-045° below 15,000'.

WARNER SPRINGS ARPT: Rnwy hazardous. Soft spots due rodent activity and grading.

YUCCA VALLEY ARPT: New arpt reported: 2 mi E; 1 rnwy, 3200'; lgts: BL4; fuel: F2.

COLORADO: CHEYENNE WELLS ARPT: Sand drifts over 3' high - dangerous. (7-5)

COLORADO SPRINGS-PETERSON FLD: Caution - lndg acft - due to rise in terrain at apch end rnwy 21.

**CORTEZ-UTE ARPT: Delete name. Combined with Montezuma Co. Arpt. (12-17)

CRAIG ARPT: Rnwy clsd for const. Use 2500' strip immediately S rnwy. (8-27)

DENVER-STAPLETON FLD-TOWER: VHF/DF commun unreliable at 40 mi below 14,000' MSL 154° to 180° and below 16,000' MSL 181° thru 243°. VHF/DF bearings reliable in these areas. (5-8) FLD: Rnwy 8L-26R clsd to operns heavier than DC-3 acft xcpt when absolutely necessary for taxiing W of rnwy 3-21. Hvy air tfc N and E due to extensive instrument trng. During hrs of darkness flashing amber lgt in segmented circle denotes rgt hand tfc. 2-way rdo rqrd. (9-12) 200' open ditch N side W end rnwy 8R-26L - flag mrkd day hrs, flashing red ngt hrs. (3-26)

EADS ARPT: Sand drifts over 3' high - dangerous. (7-5)

GRAND JUNCTION-WALKER ARPT: Rnwy 11-29 and neon apch lgts inop until about Jan 1, 1958 for reconst of rnwy and installing rnwy lgts. (8-20)

PARSHALL-SPECIAL NOTICE: Avoid canyon flying Williams Fork Dam site 5 mi SE. Hi-tension cables across canyon 200' above floor. (4-17)

PUEBLO-SPECIAL NOTICE: Controlled Firing (demolition) Area for use of the Pueblo Ordnance Depot established within the following described area: bounded on N by lat 38-22-00; E, long. 104-21-22; S- lat 38-18-00; W-long. 104-22-50. (4-30)

CONNECTICUT: HARTFORD-BRAINARD FLD: Only NE and extreme SW ends of dike lgtd.

NEW HAVEN ARPT: Arpt bcn not rotating. (8-24)

SALEM ARPT: Reported reactivated. 41-30N, 72-14W; lctd 2.4 mi E; elev: 420'; 2 rnwys-E/W 2200', NW/SE 1950'; remarks - windsock left of end SE rnwy. (7-27)

SIMSBURY ARPT: Experimental dropping of parachutes on fld during VFR wea. days Mon thru Fri. Fld occasionally clsd by standard marker.

WILTON-RADIO: DME coverage 270°-286°, 35 n mi at 3000'; 230°-360°, 35 n mi at 3000'; 360°-015°, 35 n mi at 2500'. (6-14)

DELAWARE: GEORGETOWN-SUSSEX CO. ARPT: Caution - NNE/SSW and NNW/SSE rnwys rough. Men and equip. on fld. Extensive glider activity weekends and evenings. Rnwy 16-34 W of intsxn rnwy 22 and N taxiway clsd. Rnwy 4 S of intsxn with rnwy 10-28 clsd. (1-18)

NEW CASTLE-PIASECKI ARPT: Sod strips clsd - rough. Use rnwy and taxi strip only.

**REHOBOTH BEACH-REHOBOTH AIRCRAFTERS ARPT: Lngst rnwy 3300'. (2-7)

WILMINGTON-NEW CASTLE CO ARPT: Due to limited visibility, twr unable to ctl surface tfc on parking ramps. (6-9)

REVISIONS TO STANDARD INSTRUMENT APPROACH PROCEDURES

Bearings, headings, courses & radials are magnetic. Elevations & altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.

CORRECTIONS

SHREVEPORT, LA - GREATER SHREVEPORT ARPT, ILS Procedure Number 1, Effect. 28 Sept 57: Missed Approach should read "Course 135" instead of "R-135".

LOUISVILLE, KY-STANDIFORD ARPT, ILS Procedure No. 1, Amdt. 16, Effect. 28 Sept 57: "Minimum Altitude at glide slope intsxn inbnd, 2000' ILS," should read "Minimum Altitude at glide slope intsxn inbnd, 2100' ILS".

STANDARD INSTRUMENT APPROACH PROCEDURE—TYPE RADAR

If a radar instrument approach is conducted at the below named airport, it shall be in accordance with the following instrument procedure, unless an approach is conducted in accordance with a different procedure authorized for such airport by the Administrator of Civil Aeronautics. Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the radar controller. From initial contact with radar to final authorized landing minimums, the instructions of the radar controller are mandatory except when (A) visual contact is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach. Except when the radar controller may direct otherwise prior to final approach, a missed approach shall be executed as provided below when (A) communication on final approach is lost for more than 5 seconds during a precision approach, or for more than 30 seconds during a surveillance approach; (B) directed by radar controller; (C) visual contact is not established upon descent to authorized landing minimums; or (D) if landing is not accomplished.

TRANSITION				CEILING AND VISIBILITY MINIMUMS			
					Two Engine or Less

STANDARD INSTRUMENT APPROACH PROCEDURE—TYPE ADF

If an instrument approach procedure of the above type is conducted at the below named airport, it shall be in accordance with the following instrument approach procedure, unless an approach is conducted in accordance with a different procedure for such airport authorized by the Administrator of Civil Aeronautics. Initial approaches shall be made over specified routes. Minimum altitudes shall correspond with those established for en route operation in the particular area or as set forth below.

TRANSITION				CEILING AND VISIBILITY MINIMUMS			
					Two Engine or Less		
From	To	Course and Distance	Minimum Altitude	Condition	65 Knots or Less	More Than 65 Knots	More Than Two Engine, More Than 65 Knots
Lake Charles VOR	LCH RBn	Direct	1300	T-dn	300-1	300-1	200-½
Radar vectoring position	LCH RBn (Final)	352-5.0	800	C-dn	500-1	500-1	500-1½
				A-dn	800-2	800-2	800-2

Radar terminal area transition altitude 1500' within 25 mi. Radar may be used to position aircraft for final approach within 5 miles of LCH RBn with the elimination of a procedure turn.

Procedure turn S crs, 172 Outbnd, 352 Inbnd, 1300' within 10 mi. Beyond 10 mi. NA.
Minimum altitude over facility on final approach crs, 800'
Crs and distance, facility to airport, 003-1.7
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished . . . . .
within 1.7 mi, climb to 1500' on crs of 340° within 20 mi.

AIR NAVIGATION RADIO AIDS

ALWAYS CHECK NOTICES TO AIRMEN SECTION

ATCS = Air Traffic Communications Station (CAA)

VHF OMNI-RANGE: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated ATCS. (C) The station identification is monitored continuously by the communicator at the associated ATCS. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated ATCS. Category I VOR = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category I are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored soley through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an ATCS, and located too distant from ATCS to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180", indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility. (S) = State facility.
(g) = Twr equipped with 121.9 mc or (g.7)= Twr equipped with 121.7 mc for ctl of gnd traffic.
(0700-2300) = Hours of operation local time.
(3) = Monitoring category
(B) = Blue Hemisphere. (Y) = Yellow Hemisphere
→ New or revised data
* = Automatic voice identification
■ Information deleted.
New facility has been added to tabulation and listed on page 27 until placed in proper sequence.

RADIO CLASS DESIGNATIONS

AC. . . . . Approach Control Tower, CAA (transmits on voice channel of associated ranges and ILS in addition to frequencies listed)
ARSR. . . . Air Route Surveillance Radar
B. . . . . Scheduled Broadcast Station (broadcasts weather at 15 and 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . . Control Tower, CAA
CI. . . . . Control Tower, (City, County, Private, etc.)
D. . . . . Distantly controlled
DME. . . . . Distance Measuring Equipment
FM. . . . . VHF fan marker (100 watts)
GCA. . . . Ground Controlled approach system
H. . . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . . . Instrument Landing System (voice on localizer channel)
J. . . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . . . VHF fan marker, low powered (5 watts)
LMM. . . . Compass locator station when installed at middle marker site
LOM. . . . Compass locator when installed at outer marker site
LVOR. . . Low power VOR (with standby equipment)
MH. . . . . Non-directional radio beacon (homing) power less than 50 watts
ML. . . . . Range (loop radiators), power less than 50 watts
MM. . . . . VHF middle marker
MOR. . . . Low frequency omni-directional range
MRA. . . . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . . . Range (loop radiators), power 50 or more, but less than 150 watts
OM . . . . VHF outer marker
P. . . . . Point-to-Point radio
RA. . . . . Range (adcock, vertical radiators), power 150 watts or more
RAPCON Radar Approach Control.
RL. . . . . Range (loop radiators), power 150 watts or more
S. . . . . Simultaneous range, homing signals and voice.
T. . . . . Teletype

TVOR. . . . Low power VOR (no standby equipment) located on airport
TX . . . . . Principal teletype
V. . . . . Additional VHF voice feature on other than range frequency
VAR. . . . Visual-aural VHF range
VOR. . . . VHF omni-directional range (omni-range)
W. . . . . Without voice facilities on range frequency
Z. . . . . VHF station location marker at a range station

NOTES

1. Range courses are magnetic in-bearings
2. All CAA MH facilities operate continuously unless cited as follows: (on req)
3. All CAA ranges operate continuously. Those which are not manned continuously are cited in the remarks column with hours of operation in parentheses, e.g., (0600-2400)
4. VHF and LF/LMF ranges listed with the same identifier are controlled by the same ATCS. Due to space limitations the DTV and communication frequencies which are listed with the LF/LMF facility are not repeated with the VOR facility

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

RADAR AVAILABLE: How and Where

(17 September 1957)

PAR = Precision Approach Radar. ASR = Airport Surveillance Radar. GCA = Ground Controlled Approach (Military Equivalent of Combined ASR and PAR Equipment) ARSR = Air Route Surveillance Radar. RAPCON = Radar Approach Control.

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance.

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or ASR APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for a surveillance approach are usually higher than for a precision approach.

RADAR ARRIVAL AND DEPARTURE CONTROL - Radar is utilized by certain radar equipped facilities to control the flight paths of arriving or departing IFR aircraft for the purpose of expediting the flow of traffic. Aircraft operating on IFR flight plans will be afforded a minimum of three miles horizontal separation unless standard non-radar vertical, lateral or longitudinal separation exists. This should not be confused with Ground Controlled Approach (GCA) which is an instrument approach aid.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Airman's Guide.

RAPCON - At certain locations, the surveillance portion of Military RAPCONS is operated by the CAA and service is available to all aircraft. These are listed below.

RADAR BEACONS - Military type radar beacon ground equipment of the IFF Mark X type is being made available for operation at all CAA operated RAPCON facilities and some air route surveillance radar facilities. This system is available only for operation with military aircraft and should not be confused with the air traffic control radar beacon system (ATCRBS) now under development. See "Remarks" column of Radar Approach Control (RAPCON), page 4. For ATCRBS see note page 4.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.
Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.
Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.
Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions for aircraft to make 360 degree turns for identification. In either case, instructions will be followed at the pilot's discretion. After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible. Civil Minimums at military installations established by the CAA are 400' ceiling and 1 statute mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums. Navy units are prepared to transmit on HF from 2,000 to 18,000 kc and receive any frequency from 1,500 to 9,050 kc to aid any plane in emergency.

RADAR WEATHER ADVISORY SERVICE: See Page 4.

CAA OPERATED RADAR UNITS

NOTE: Transmitting frequencies below 118 mc are not guarded. Other transmitting frequencies listed are guarded plus 3023.5kc, 122.5 mc, unless 122.7 mc is shown under Remarks. Transmit and guard 121.5 mc all locations.

RADAR WEATHER ADVISORY SERVICE - continued from page 3.

RADAR WEATHER ADVISORY SERVICE: Pilots may be aided in avoiding hazardous weather by obtaining Radar Advisory Service from radar facilities of the Air Defense Command through use of the following procedures:

1. Using the frequency 133.2 mc. (or 121.5 mc if 133.2 mc not available) transmit:
"STARGAZER THIS IS (aircraft identification), POSITION (_____), HEADING (_____), IFR (or) VFR FLIGHT PLAN, OVER"
The word "STARGAZER" is a special call sign which automatically indicates a request for radar advisory service. After contact is established the pilot will use the call sign of the radar station which responds.
(a) If the aircraft has dual radio installation the pilot on an IFR flight plan should maintain a guard on the normal ATC frequency while in contact with the radar facility.
(b) If the aircraft does not have dual radio installation the pilot on an IFR flight plan shall, prior to leaving the normal ATC frequency, advise the ARTC Center (direct or via appropriate communication station), "CHANGING TO RADAR ADVISORY SERVICE".

2. The radar director will answer the "STARGAZER" call:
"(aircraft identification) THIS IS (name of radar site), (instructions)"
The instructions will normally consist of one of the following:
(a) "UNABLE" (This is a procedural word used by ADC radar facilities when radar advisory service cannot be furnished for any reason. Upon receipt the pilot shall terminate the contact immediately and return to the normal enroute frequency.)
(b) General information concerning the storm area and, if appropriate, "STANDBY FOR ATC CLEARANCE". (This instruction is for pilots on IFR flight plans only. It signifies that the radar director will obtain approval from the ARTC Center for the new flight path before giving vectors. The pilot shall standby on the radar advisory frequency).
(c) General information concerning storm area and a suggested flight path or specific vectors to avoid the storm. (This is for pilots on VFR flight plans. Pilot may take action at his own discretion).
(d) "UNABLE - SUGGEST YOU CONTACT (call sign of adjacent ADC radar)". (The radar director will make this statement if he determines from observation of the aircraft's position on his radar that another radar site can better serve the pilot's needs).
(e) "NO CIRCUITS FOR ATC CLEARANCE, OBTAIN YOUR OWN CLEARANCE -SUGGESTED FLIGHT PATH IS....." (This signifies that the radar site does not have a communication circuit with the ARTC Center and, therefore, the pilot must obtain his own ATC clearance if a deviation from current clearance is indicated by the suggested flight path).

3. The pilot shall immediately return to the normal enroute frequency when:
(a) radio contact with the director is lost.
(b) notified by the radar director that radar contact has been lost.
(c) the advisory service is completed.

4. In all cases the information furnished by the radar facility is advisory in nature and the responsibility for safe operation of the aircraft rests with the pilot.

RADAR BEACONS - (continued from page 3)

ATCRBs - Air traffic control radar beacon transponders (ATC transponders) are being installed in some civil aircraft to participate in the forth-coming in-service evaluation of this beacon system. Since the ATC transponder can be used with Mode 3 of the IFF Mark X system, the following will govern the operation of the ATC transponder in order to reduce interference and clutter on IFF Mark X radar displays.

1. Within the environment test area designated within a 200-mile radius of the following locations, the ATC transponder will be operated in accordance with the request of air traffic control. Ground equipment installations will start approximately October 1, 1957, at the following locations: New York center; Idlewild, La Guardia and Newark towers. Installation at the Washington center and tower, the Chicago center and O'Hare tower and the Norfolk center will follow as soon as equipment becomes available. Notification of the start of the actual evaluation will be made at a later date.

2. Air traffic control transponders will be adjusted to Code 00 and turned on only in aircraft operating on an IFR flight plan unless otherwise requested by any ground station.

3. When filing a domestic IFR flight plan for an aircraft equipped with a functioning ATC transponder, this shall be made known by adding the word "transponder" immediately following the aircraft identification. Example: "Braniff six transponder".

4. Aircraft using the "Stargazer" service offered by the Air Defense Command will advise the radar operator of the status of the ATC transponder and will operate it in accordance with the operator's request regardless of the type of flight being conducted.

5. Aircraft operating from the domestic area will comply with (3) above. Aircraft entering the domestic control area will only advise oceanic air traffic control of the status of the Air Traffic Control transponder when making the first radio report to the United States oceanic air traffic control center.

DIRECTORY OF AIRPORTS – LEGEND

CITY AND AIRPORT NAME

(AF) City and Airport Name (with L or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such activity thereon.

NOTE: Similar combinations of above citation of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields, respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

NOTES:

1. Where lights are owned or maintained by CAA the site number and airway abbreviation are included in the city and airport name column ie: Chadron, 15, CYS-HON.
2. USAF aircraft are permitted to use only those fields prefixed with an AF, A, N, NG, CG, P, PC.
3. When city and airport names are identical, the airport name is omitted to conserve space.
4. When city is part of airport name, a dash will appear between city and airport, such as Venice-State.

TYPE

P - Public Use L - Limited

NOTES

PUBLIC USE - Intended for general use by the public at large, this category consists of:

(1) Operationally active airports (those attended during normal working hours of each day, and provide, as a minimum of service, aircraft fuel for sale at the airport).
(2) All airports serving scheduled and large irregular air carriers as regular, alternate and provisional stops.
(3) All CAA intermediate landing fields.
(4) All airports having a true light certificate to indicate a lighted airport.
(5) All airports with CAA facilities.
(6) All airports on which Federal funds have been expended under the FAAP and the Development of Landing Areas - National Defense.

Data on these airports are obtained from physical inspections made by CAA personnel.

LIMITED - All airports not qualifying as "Public Use" (See definition above)

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is from the center of referenced city to airport and carried in statute miles.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

LOCATION (Continued)

If orientation features are less than 1/2 mile from the field, distance is not specified.

ELEVATION

Elevation is given in feet above mean sea level and is based on highest usable portion of landing area.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips, as far as number of landing areas in field is concerned.

LONGEST RUNWAY AND FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, weather reports, and unicom available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet, using 70 as division point. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h -runway is paved (concrete, asphalt or similar type of paving)
aw -allway field
(26) -runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon) (Green and white, split-beam and other types) Omission of B indicates rotating light is either not available or not operating standard hours (sunset-sunrise)

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting

L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
1 - Portable lights (Electrical)
2 - Boundary
3 - Runway floods
4 - Runway or Strip
5 - Instrument approach (neon)
6 - High intensity runway
7 - High intensity instrument approach
7a, 7b, 7c - High intensity instrument approach, U. S. National Standard configuration A, B, or C. See page 67 for diagrams.

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor airframe repairs
S3: Storage, minor airframe & minor powerplant repairs
S4: Storage, major airframe & minor powerplant repairs
S5: Storage, major airframe & major powerplant repairs

NOTE: Any S combination without parenthesis indicates only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.

Any S combination in parenthesis-part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or CAA communications station on field.

UNICOM

Unicom (Aeronautical Advisory Station transmitting and receiving, during the airport hours only, as follows):
U - 122.8 mc (for airports without a control tower); and
X - 123.0 mc (for airports with a control tower).

FUEL OCTANE

F1: 80 oct., at least
F2: 80/87 oct., and lower
F3: 91/96 oct., and lower
F4: 100/130 oct., and lower
F5: 115/145 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.

Any F combination without parenthesis indicates full time day attendant, in parenthesis part-time or irregular attendant.

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.
(b) "CLOSED" indicates closed to all traffic except in emergency.
(c) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.
(d) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.
(e) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.
(f) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.
(g) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

NOTES

1. ← New or revised data.
2. SCHEDULED AIRLINE STOP: Airport names are capitalized.
3. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
4. NEW AIRPORTS: At the end of each state, under this listing will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

NOTICES TO AIRMEN
SPECIAL NOTICES

✓ Indicates new or revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a Notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the General Services Office, Attention: W-120 (formerly W-52), CAA, Washington 25, D. C.)

Permanent airport data changes should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide

---

HOW TO USE THE AIRMAN'S GUIDE: The Airman's Guide is issued every two weeks. Every issue contains a Notices to Airmen section; every other issue additionally contains a Radio Facility Data section; and once each quarter the Directory of Airports appears in an issue containing both of these sections.

CONTENTS: The contents of each issue are noted on the front cover. The first page of each section carries the Legend for interpreting codified information. Material normally included in each section is as follows:

(1) Notices to Airmen: Gives current condition of facilities and any special flight regulations or restrictions; cites data changes which serve to correct less frequently issued publications or charts; included as Special Notices are amendments to restricted areas, location identifiers, minimum en route IFR altitudes, civil airways, control areas, control zones, reporting points, VOR check points, standard instrument approach procedures, etc.

(2) Radio Facility Data: Lists radar facilities, instrument landing systems, and all other aeronautical radio facilities with their transmitting and guarded frequencies, identification, station class, range courses and remarks.

(3) Directory of Airports: This codified directory covers airport type, class, elevation, runway length and number, lights, servicing, obstructions, fuel octanes, weather reports available, unicom available, and remarks.

SPECIAL NOTICES: Special Notices usually appear at the beginning of the Notices to Airmen section. Special Notices are frequently indicated on the front cover, giving the subject and page number where the information is found.

CIVIL USE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission.

In the case of Air Force Bases, pilots must have on file with Headquarters USAF a "HOLD HARMLESS" AF form 180 and in their possession a properly signed and executed AF form 181 permit. Application for these forms may be made to: Assistant Chief of Staff, Installations, HQ, USAF, Washington 25, D. C. This regulation will be strictly enforced.

For Naval Installations, prior permission should be requested from the Chief of Naval Operations (OP 532) via the Commanding Office of the field concerned, (who has the authority to approve landing rights for certain categories of civil aircraft). However, with minor exceptions, authority to use Navy field is granted only to aircraft on government business, or when no suitable civil airport is available in the vicinity.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

FLIGHT PLANS: Pilots are urged to file VFR flight plans in person or by telephone prior to departure. Radio should be used for filing flight plans only when it is impossible to file in person or by telephone. This procedure is necessary in order to avoid congestion on the already busy air-ground communications channels. These channels should be reserved for essential in-flight communications. All pilots will benefit by following this practice.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical locations. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations).

Omniranges where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification:

e. g. Long Beach omnirange (Voice) .-.. --.. -... (LGB in Code)

For omniranges, as shown above, normal voice identification consists of the name of the omni followed by the word "omni". However, if the omni is unattended, i. e. if no facility for providing air-ground communications services is associated with the omni the word "unattended" will precede the word "omni". Example: AIRVILLE UNATTENDED OMNI.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciable higher rate of speed than the location identifier.

INTERFERENCE ON ATCS COMMUNICATIONS CHANNELS: If excessive interference is noted on ATCS VHF or UHF simplex frequencies, pilots should request the ATCS to reply on the VOR voice channel. (Reference to the Air Navigation Radio Aids Section will indicate which VORs have a voice channel). This will often expedite the exchange of messages as the VOR has a clear channel for communications.

✓ NEW UNICOM FREQUENCY: Frequency 123.0 mc has been designated for UNICOM by the Federal Communications Commission where an airport is served by a control tower. Where there is no control tower, 122.8 mc is the frequency designated for use. Also 122.8 mc may be used by acft in civil defense work. These frequencies shall not be used for air traffic control purposes and only one UNICOM will be authorized at each landing facility.

RUNWAY VISUAL RANGE REPORTS AT NEWARK, N. J.: Effective March 3, 1956, measurements of runway visibility for Runway 4 at Newark, New Jersey, will be in terms of Runway Visual Range which is the distance high intensity runway lights can be seen by an observer located at the runway threshold viewing the lights in the same direction as a pilot making an approach.

The ILS and PAR instrument approach procedures for Newark have been amended to authorize 2600' of runway visual range as an additional operating minimum for straight-in approaches to Runway 4. When measurements of Runway Visual Range are being taken, the tower will give pilots intending to land straight-in on runway 4, the reported Runway Visual Range. When the meteorological ceiling and visibility (contained in "main body" of sequence report which is the average weather for the airport proper) are reported below minimums, (e.g. 200, 5), an approach may be conducted to Runway 4 provided Runway Visual Range is reported at or above 2600'. The "remarks" portion of the hourly weather sequence for Newark will report Runway Visual Range in hundreds of feet, and runway visibility will no longer be reported in miles and fraction.

Since Runway Visual Range recognizes the additional penetration provided by high intensity runway lights and is measured in terms of what a pilot actually sees, pilots will have better assurance of finding runway conditions substantially as reported when arriving over the threshold.

The Runway Visual Range minimum of 2600' is also based on the penetration ability of the approach lighting system installed at Newark which is designed to assure earlier transition from instrument to visual flight.

GLIDE SLOPE FLARE: Modification of null reference glide slope facilities will result in glide slope flare at about thirty (30) feet above runway. Caution advised on automatic approaches continued past runway threshold.

ATC PROCEDURES - APPROACH CONTROL: On page 66 of FIM, Volume 10, dated June 15, 1956, the following note should be added preceding the last paragraph:

"NOTE: A clearance for a specific type of approach (ILS, ADF, or Straight-in Approach) to an aircraft operating on an IFR flight plan does not necessarily mean that priority will be given over other traffic for a landing. Often because of local traffic or runway in use, it may be necessary for the controller, in the interest of safety, to provide a different landing sequence."

IFR RATE OF CLIMB OR DESCENT: In the interest of standardizing operating procedures for IFR flight and to provide greater utilization of available airspace, pilots are requested to adhere to the following procedure when cleared by air traffic control to climb or descend in excess of 1000 feet to an approved altitude:

1. Unless cleared otherwise by air traffic control, climb as rapidly as practicable to 1000 feet below the assigned altitude and then not to exceed 500 feet per minute until the assigned altitude is reached.
2. Unless cleared otherwise by air traffic control, descend as rapidly as practicable to 1000 feet above the assigned altitude and then not to exceed 500 feet per minute until the assigned altitude is reached.

ATC DEPARTURE CLEARANCES: Effective November 1, 1956, air traffic controllers will discontinue issuing departure clearances specifying that any portion of the departures shall be conducted in "VFR conditions" unless provision of positive separation will result in an excessive departure delay and the pilot indicates that he will accept a VFR restriction. To reduce communications and expedite departures wherever possible, pilots should include in their requests for departure clearances a statement that they will accept a VFR restriction either during climb to cruising altitude or to a specified altitude.

INABILITY TO COMPLY WITH ATC CLEARANCES: The pilot should always advise air traffic control when his aircraft is not equipped or its performance is insufficient to comply with an issued air traffic control clearance. A brief reason such as "unable account loads" or "unable transmit 3023.5" may be included if considered necessary for clarification. The pilot may then expect an amended air traffic control clearance.

NOTIFICATION OF NON-COMPLIANCE BY MILITARY AIRCRAFT: The 323rd Fighter-Bomber Wing, Bunker Hill AFB, Indiana is performing low altitude navigational training flights at two hundred feet for the purpose of pilot proficiency under the authority of Section 60.1(a) of the Civil Air Regulations. Route of flight: Bunker Hill AFB, Indiana heading 261° to Loda, Illinois; 280° to Lake Bloomington, Illinois; 059° to a point at latitude 40-55, longitude 88-24; 088° to latitude 40-53, longitude 86-53 (approximately 2 nautical mi North of Monon, Indiana); 112° climbing to traffic altitude to Bunker Hill AFB, Indiana, point of beginning.

The Army Aviation Training Detachment, Edward Gary Army Air Force Base, San Marcos, Texas, is conducting aerobatic training on civil airways V222 and V198 under authority of Part 60.1(a) of the Civil Air Regulations. The training activity is being conducted below 5000 feet MSL in VFR conditions between Smithville intersection and San Antonio VOR on V222, and between Eagle Lake and San Antonio VOR's on V198. Flights operating between those points on V222 and V198 at less than 5000 feet MSL should do so with extreme caution.

ATC PROCEDURES - RADAR TRAFFIC CONTROL: On page 67 of FIM, Volume 10, dated June 15, 1956, insert preceding the last sentence of the first paragraph:

"Therefore, aircraft must not deviate from headings issued by approach control and must not deviate from the normal final approach course unless a clearance to do so is received from air traffic control. After passing the approach fix (outermarker, radio range, etc.) on final approach, aircraft are expected to proceed straight to the airport and complete the apch or effect the missed approach procedure set forth for that airport".

And following the first sentence of the second paragraph, insert:

"Whenever the proposed routing beyond the short-range clearance limit differs from that filed in the original flight plan, the amended routing will be specified, in the short-range clearance issued to the pilot before takeoff. If a loss of two-way communications occurs, the pilot will be expected to follow the amended routing to filed flight plan route and/or destination. (Note: This procedure is also applicable when nonradar short-range clearance is issued)."

WASHINGTON, D. C. HIGH DENSITY AIR TRAFFIC ZONE: Effective April 15, 1957, all the airspace within the current boundaries of the Washington Control Zone extending upwards from the surface to and including an altitude of 3000 feet above the surface is designated as a High Density Traffic Zone, and the Washington National Airport is designated as a High Density Airport. Radio communication must be made with Washington National Airport control tower before commencing a take-off or landing at or entering, the traffic pattern of Washington National Airport, unless prior authorization from the Washington National Airport traffic control tower has been received by aircraft not equipped with functioning two-way radio.

Maximum speed within the zone is 180 mph or 160 knots indicated airspeed unless operational limitations for a particular aircraft require greater airspeeds, in which case the aircraft shall not be flown in excess of the minimum speed consistent with the safe operational limitations of the aircraft.

Pilots should use every effort to maintain a continuous listening watch while within the zone so as to receive any pertinent air traffic information which may be transmitted and thus be alerted to avoid collision hazard within zone.

TWO-WAY RADIO FAILURE: Under CAR 60.49 Radio Failure, pilots of IFR flights experiencing two-way radio failure are expected to adhere to the procedures prescribed on page 63 of the current Flight Information Manual under "Two-way Radio Failure," and "En Route Procedures."

However, if a pilot should become lost, or if other factors prevent the pilot from being able to comply with the provisions described on page 63, such pilots, as well as pilots of VFR flights, in the exercise of their emergency authority under CAR 60.2, may elect to attempt to alert civil or military radar systems by flying the appropriate pattern as described on page 49 of the current Flight Information Manual.

INTERFERENCE WITH SEARCH AND RESCUE OPERATIONS: Information received from air rescue units presents evidence that civilian pilots are interfering and, in some cases, jeopardizing aircraft engaged in rescue operations. Most of the instances are caused by pilots on sightseeing flights in the immediate area of an accident. Accordingly, the CAA Office of Flight Operations and Airworthiness strongly urges that pilots who are not engaged in the search and rescue operation refrain from conducting sightseeing flights at the scene of an accident while the rescue operations are being conducted.

CIVIL AIRWAY, CONTROL AREA, CONTROL AREA EXTENSION, CONTROL ZONE AND REPORTING POINT AMENDMENTS: Effective October 24, 1957, unless otherwise advised the following civil airways, control areas, control area extensions, control zones and reporting points are amended in whole or in part as follows:

CIVIL AIRWAYS:

(1) Amber civil airway No. 3 (El Paso, Tex. to Great Falls, Mont.) is amended by adding the following sentence to the airway designation: "The portion of this civil airway above 20,000'MSL which overlaps the White Sands restricted area, Area 2 (R-521) shall be used only after obtaining prior approval from Civil Aeronautics Administration Air Traffic Control."

(2) Red civil airway No. 10 (Wichita Falls, Tex. to Augusta, Ga.) is amended by changing the caption and by changing the portion which reads: "From the Amarillo, Tex. rdo rng stn via the Wichita Falls, Tex. rdo rng stn; Dallas, Tex., nondirectional rdo bcn;" to read: "From the Wichita Falls, Tex., rdo rng stn via the Dallas, Tex., nondirectional rdo bcn;" (Note: Deleted portion Red 10 between Amarillo and Wichita Falls, Tex.; Clarendon, Tex., LFR being decommissioned concurrently)

(3) Red civil airway No. 66 (Santa Barbara, Calif., to Los Angeles, Calif) is revoked.

(4) Red civil airway No. 77 (Greensboro, N. C., to Atlantic City, N. J.) is amended by changing the name of the facility "Dover, Del., AFB rdo rng stn" to read: "Dover, Del., AFB nondirectional rdo bcn." (Note: AF to convert LFR to Rbn prior to or concurrently)

(5) Blue civil airway No. 7 (Hollister, Calif., to Williams, Calif.) is amended to read: "From the intsxn of the SE crs of the Oakland, Calif., rdo rng and the S crs of the Travis AFB Calif., rdo rng via the Travis AFB, Calif., rdo rng stn to the Williams, Calif., rdo rng stn." (Note: Reworded due to realignment of W crs Fresno. Note also that Blue 10 will automatically follow - realigned W crs of Fresno to 272°T. Other Fresno courses to be: E 092°T; N 332°T; S 152°T; all from stn.)

(6) Blue civil airway No. 14 (El Centro, Calif., to Sacramento, Calif.) is amended by changing the last portion to read: "From the Fresno, Calif., rdo rng stn via the intsxn of the W crs of the Fresno, Calif., rdo rng and the S crs of the Stockton, Calif., rdo rng; Stockton, Calif., rdo rng to the intsxn of the N crs of the Stockton, Calif., rdo rng and the SE crs of the Sacramento, Calif., rdo rng." (Note: Due to realignment of W crs Fresno)

(7) Blue civil airway No. 35 (Oxnard, Calif., to Bakersfield, Calif.) is revoked.

(8) Other civil airways, Winslow, Ariz., to Las Vegas, Nev., civil airway is revoked.

(9) VOR civil airway No. 16 (Los Angeles, Calif., to Boston, Mass.) is amended by changing the portion which reads: "Dallas, Tex., omni stn, including a S alternate;" to read: "Dallas, Tex., omni stn, including a S alternate via the intsxn of the Mineral Wells omnirange 096°T and the Dallas omnirange 242°T radials;" (Note: Redesignated V16S between Mineral Wells VOR and Dallas VOR.)

(10) VOR civil airway No. 19 (El Paso, Tex., to Great Falls, Mont.) is amended by adding the following sentence to the airway designation: "The portion of this civil airway above 20,000' above MSL which overlaps the White Sands restricted area, Area 2, (R-521) shall be used only after obtaining prior approval from Civil Aeronautics Administration Air Traffic Control."

(11) VOR civil airway No. 56 (Montgomery, Ala., to Florence, S.C.) is amended to read: "From the Montgomery, Ala., omni stn via the intsxn of the Montgomery omnirange 049°T and the Columbus omnirange 266°T radials; Columbus, Ga., omni stn; Macon, Ga., omni stn; Augusta, Ga., omni stn; Columbia, S.C., omni stn; intsxn of the Columbia omnirange 079°T and the Florence omnirange 246°T radials; to the Florence, S.C., omni stn." (Note: Revoked V56N between Columbia VOR and Florence VOR. Added dog-leg to V56 between Columbia VOR and Florence VOR.)

(12) VOR civil airway No. 77 (Cotulla, Tex., to Des Moines, Iowa) is amended by changing the caption and the portion which reads: "From the San Angelo, Tex., omni stn via the Abilene, Tex., omni stn, including an E alternate via the intsxn of the San Angelo omnirange 072°T and the Abilene omnirange 181°T radials;" to read: "From the Cotulla, Tex., omni stn via the Junction, Tex., omni stn; San Angelo, Tex., omni stn; Abilene, Tex., omni stn, including an E alternate via the intsxn of the San Angelo omnirange 072°T and the Abilene omnirange 181°T radials;" (Note: Added new portion to V77 from Cotulla VOR to San Angelo VOR via Junction VOR. Portion Cotulla VOR to Junction VOR was formerly V211. Portion Junction VOR to San Angelo VOR is also existing V68.)

(13) VOR civil airway No. 79 (Fort Stockton, Tex., to Lubbock, Tex.) is amended to read: "From the Fort Stockton, Tex., omni stn via the Wink, Tex., omni stn; Hobbs, N. Mex., omni stn; to the Lubbock, Tex., omni stn." (Note: Added new portion to V79 from Fort Stockton VOR to Wink VOR. Former portion V79 from Culberson VOR to Wink VOR via Arno Intersection is revoked.)

(14) VOR civil airway No. 137 (Thermal, Calif. to Ukiah, Calif.) is amended by adding a new last sentence to read: "The portion of this airway below 3000' above MSL which lies within the Tomales Point Restricted Area (R-519) is excluded."

(15) VOR civil airway No. 198 (El Paso, Tex., to Galveston, Tex.) is amended to read: "From the El Paso, Tex., omni stn via the intsxn of the El Paso omnirange 132°T and the Hudspeth omnirange 272°T radials; Hudspeth, Tex., omni stn; intsxn of the Hudspeth omnirange 117°T and the Fort Stockton omnirange 274°T radials; Fort Stockton, Tex., omni stn; Rock Springs, Tex. omni stn; point of intsxn of Rock Springs omnirange 090°T radial with the San Antonio omnirange direct radial to the Junction, Tex., omni stn; San Antonio, Tex., omni stn; Eagle Lake, Tex., omni stn; to the Galveston, Tex., omni stn." (Note: Added new portion to V198 from El Paso VOR to San Antonio VOR via Fabens Int, Hudspeth VOR, Apache Int, Fort Stockton VOR, Rock Springs VOR and Comfort Int.)

(16) VOR civil airway No. 199 (San Francisco, Calif., to Ukiah, Calif.) is amended to read: "From the Agnew, Calif., omni stn via the intsxn of the Agnew omnirange 304°T and the Ukiah omnirange 172°T radials; to the Ukiah, Calif., omni stn. The portion of this airway which conflicts with the Tomales Point Restricted Area (R-519) is excluded." (Note: Revoked the portion of V199 from Fresno VOR to Agnew VOR.)

(17) VOR civil airway No. 211 (Fort Stockton, Tex., to Cotulla, Tex.) is amended to read: "From the Fort Stockton, Tex., omni stn via the point of intsxn of the Rocksprings omnirange 308°T with the Fort Stockton omnirange direct radial to the Junction, Tex., omni stn; Rock Springs, Tex., omni stn; point of intsxn of the Rocksprings omnirange 133°T radial with the Cotulla omnirange direct radial to the Junction, Tex., omni stn; to the Cotulla, Tex., omni stn." (Note: Redesignated V211 from Cotulla VOR to Fort Stockton VOR via Ozona Int and Rock Springs VOR. Former V211 from Cotulla VOR to Junction VOR redesignated as a part of V77.)

(18) VOR civil airway No. 222 (El Paso, Tex., to Houston, Tex.) is amended by changing the caption and by changing the portion which reads: "From the Culberson, Tex., omni stn via the Fort Stockton, Tex., omni stn;" to read: "From the El Paso, Tex., omni stn via the Salt Flat, Tex., omni stn; Culberson, Tex., omni stn; Fort Stockton, Tex., omni stn;" (Note: Added new portion to V222 from El Paso VOR to Culberson VOR via Salt Flat VOR. Portion El Paso VOR to Salt Flat VOR is also existing V16. Portion Salt Flat VOR to Culberson VOR is new airway.)

(19) VOR civil airway No. 283 (unassigned)

(20) VOR civil airway No. 284 (Fort Stockton, Tex., to San Angelo, Tex.) is added to read: "From the Fort Stockton, Tex., omni stn to the San Angelo, Tex., omni stn." (Note: New airway)

(21) VOR civil airway No. 1520 (Los Angeles, Calif., to Washington, D.C.) is amended by changing the portion which reads: "From the Little Rock, Ark., omni stn via the Memphis, Tenn., omni stn; to the Jackson, Tenn., omni stn. From the Crossville, Tenn., omni stn via the intsxn of the Crossville omnirange 104°T and the Knoxville omnirange 249°T radials; Knoxville, Tenn., omni stn;" to read: "From the Little Rock, Ark., omni stn via the Memphis Tenn., omni stn; Muscle Shoals, Ala., omni stn; point of intsxn of the Crossville, Tenn., omnirange 104°T and the Knoxville omnirange 249°T radials; Knoxville, Tenn., omni stn;" (Note: Redesignated V1520 from Little Rock VOR to Knoxville VOR via Memphis VOR, Muscle Shoals VOR and Sweetwater Int.)

CONTROL AREAS:

(1) Red civil airway No. 10 (Wichita Falls, Tex., to Augusta, Ga.) caption changed.

(2) Red civil airway No. 66 (Santa Barbara, Calif., to Los Angeles, Calif.) is revoked.

(3) Blue civil airway No. 35 (Oxnard, Calif., to Bakersfield, Calif.) is revoked.

(4) VOR civil airway No. 56 (Montgomery, Ala., to Florence, S.C.) is amended to read: "All of VOR civil airway No. 56."

(5) VOR civil airway No. 77 (Cotulla, Tex., to Des Moines, Iowa) is amended to read: "All of VOR civil airway No. 77 including E alternates, but excluding the airspace between the main airway and its E alternate between the San Angelo, Tex., omni stn and the Abilene, Tex omni stn."

(6) VOR civil airway No. 79 (Fort Stockton, Tex., to Lubbock, Tex.) is amended to read: "All of VOR civil airway No. 79."

(7) VOR civil airway No. 198 (El Paso, Tex., to Galveston, Tex.) is amended to read: "All of VOR civil airway No. 198."

(8) VOR civil airway No. 199 (San Francisco, Calif., to Ukiah, Calif.) is amended to read: "All of VOR civil airway No. 199."

(9) VOR civil airway No. 211 (Fort Stockton, Tex., to Cotulla, Tex.) is amended to read: "All of VOR civil airway No. 211."

(10) VOR civil airway No. 222 (El Paso, Tex., to Houston, Tex.) is amended to read: "All of VOR civil airway No. 222."

(11) VOR civil airway No. 283 (unassigned)

(12) VOR civil airway No. 284 (Fort Stockton, Tex., to San Angelo, Tex.) is added to read: "All of VOR civil airway No. 284."

CONTROL AREA EXTENSIONS:

(1) (Lake Charles, La.) is amended to read: "All of the airspace within a 40 mi radius of the Lake Charles omni stn and within 5 mi either side of the 334°T radial of the Lake Charles imnirange extending from the 40 mi radius area to a point 58 mi NW of the omni stn."

(2) (North Bend, Oreg.) is added to read: "Within 5 mi either side of the 90°T & 270°T radials of the North Bend omnirange extending from the omni stn to points 20 mi E and W."

(3) (Grosse Ile, Mich) is amended by changing the words: "bounded on the W by VOR civil airway No. 197" to read: "bounded on the W by Blue civil airway No. 87."

(4) (Wilmington, N.C.) is amended to read: "That area within tangent lines of circles 5 s mi in radius centered on the Carolina Beach (Wilmington, N.C.) nondirectional rdo bcn and 15 s mi in radius centered on the intsxn of the western bndry of the New York Oceanic Control Area and a direct line between the Carolina Beach nondirectional rdo bcn and the Oakes, Nassau, BWI nondirectional rdo bcn extending from the Carolina Beach nondirectional rdo bcn to the western bndry of the New York Oceanic Control Area and the lat 31-30-00N parallel, excluding that portion below 2000'MSL which lies outside the continental limits of the United States."

(17 September 1957)

(5) (Merced, Calif.) is amended by changing the words which read: "on the S by VOR civil airway No. 199." to read: "on the S by Blue civil airway No. 10."

(6) (Port Allen, Kauai, T.H.) is amended to read: "The airspace within 5 mi either side of the S crs of the Port Allen rdo rng extending from the rdo rng stn to its intsxn with a line bearing 246°T from the Honolulu, Oahu, T.H., rdo rng stn; the airspace lying NE of Port Allen bounded on the S by Red civil airway No. 87, on the W by lon. 159-30-00W, and on the NE by the arc of a circle 25 s mi in radius centered at lat 21-58-07N, long. 159-20-27W." (Note: Area D of Warning Area W-322 being revised accordingly concurrently.)

(7) (Altus, Okla.) is amended by changing the portion which reads: "And on the S by Red civil airway No. 10" to read: "and on the S by VOR civil airway No. 114."

(8) (San Bernardino, Calif.) is added to read: "The airspace SE of the Norton Air Force Base, San Bernardino, Calif., bounded on the NW by VOR civil airway No. 264, on the NE by VOR civil airway No. 137, on the S by VOR civil airway No. 16 and on the W by Blue civil airway No. 14."

(9) (Richmond, Ind.) is added to read: "That airspace bounded on the N by VOR civil airway No. 12, on the E by VOR civil airway No. 275, and on the SW by VOR civil airway No. 97."

(10) (Tampa, Fla.) is amended to read: "That area within tangent lines of a circle 5 mi in radius centered on the Egmont Key, Fla., nondirectional rdo bcn and a circle 10 mi in radius centered on the intsxn of the eastern bndry of the New Orleans Oceanic Control Area and a rhumb line between the Egmont Key nondirectional rdo bcn and the South Pass West Jetty, La., nondirectional bcn, excluding the portion below 2000'MSL which lies outside the continental limits of the United States."

CONTROL ZONES:

(1) Five mi radius zones is amended by adding the following airports: North Bend, Oreg.: North Bend Arpt and by deleting the following airports: Chandler, Ariz.: Williams AFB; Sherman, Tex.: Perrin AFB.

(2) (Lansing, Mich.) is amended to read: "Within a 5 mi radius of the Capital City Arpt, Lansing, Mich., within 2 mi either side of the E crs of the Lansing rdo rng extending from the rdo rng stn to a point 12 mi E, within 2 mi either side of the 232°T radial of the Lansing omnirange extending from the omni stn to a point 12 mi SW, within 2 mi either side of the 52°T radial of the Lansing omnirange extending from the omni stn to a point 12 mi NE of its intsxn with the NW crs of the Lansing rdo rng, within 2 mi either side of the Lansing ILS lclzr front crs extending from the lclzr to a point 12 mi E of the ILS outer mrkr, and within 2 mi either side of the ILS lclzr back crs extending from the lclzr to a point 10 mi W of its intsxn with the Lansing omnirange 358°T radial."

(3) (Fresno, Calif.) is amended to read: "Within a 5 mi radius of Fresno Air Terminal and within a 3 mi radius of Fresno-Chandler Municipal Arpt, and within 2 mi either side of the W and SW courses of the Fresno rdo rng extending from the rdo rng stn to points 10 mi W and SE."

(4) (Amarillo, Tex.) is amended by changing the portion which reads: "and within 2 mi either side of the E crs of the rdo rng extending from the rdo rng stn to its intsxn with the NW crs of the Clarendon, Tex., rdo rng." to read: "and within 2 mi either side of the E crs of the rdo rng extending from the rdo rng stn to a point 18 mi E."

(5) (Dover, Del.) is amended to read: "Within a 6 mi radius of Dover Air Force Base, within 2 mi either side of the Dover ILS lclzr crs extending from the Air Force Base to a point 10 mi S of the ILS lclzr outer mrkr, and within 2 mi either side of a line bearing 126°T extending from the Dover AFB nondirectional rdo bcn to a point 10 mi SE, excluding the portion which overlaps restricted area (R-12)." (Note: Dover AFB LFR being converted to Rbn prior to or concurrently).

(6) (Pocatello, Idaho) is amended by changing the words "Phillips Arpt" to read: "Pocatello, Municipal Arpt."

(7) (Chandler, Ariz.) is added to read: "Within a 5 mi radius of Williams Air Force Base Chandler, Ariz., and within 2 mi either side of a line bearing 115°T extending from the Air Force Base to the Chandler AFB nondirectional rdo bcn." (Note: HW lctd at 33-15-09, 111-31-52)

(8) (San Jose, Calif) is added to read: "Within a 3-1/2 mi radius of the San Jose Municipal Arpt, excluding the portion which overlaps the Mountain View, Calif., Moffett NAS control zone."

(9) (Sherman, Tex.) is added to read: "Within a 5 mi radius of Perrin Air Force Base, Sherman, Tex., within 2 mi either side of the 002°T and 179°T radials of the Perrin AFB terminal omnirange extending from the TVOR to points 10 mi N and S."

REPORTING POINTS:

(1) Red civil airway No. 10 (Wichita Falls, Tex., to Augusta, Ga.) is amended by changing the caption.

(2) Red civil airway No. 66 (Santa Barbara, Calif., to Los Angeles, Calif) is revoked. (Note: Revoking this section automatically revoked Fillmore intsxn (E Santa Barbara and NE Camarillo) as compulsory reporting point.)

(3) Blue civil airway No. 10 (Fresno, Calif., to Williams, Calif.) is amended to read: "Evergreen, Calif., nondirectional rdo bcn."

(4) (Oxnard, Calif., to Bakersfield, Calif.) is revoked.

(5) Other reporting points is amended by (1) adding the following: (a) Gateway Pine Int: The intsxn of the 239°T radial of the North Bend, Oreg., omnirange and the eastern boundary of the Seattle Oceanic Control Area at lat 42-19-15N, long. 126-46-30W."; (b) Gateway Hemlock Int: The intsxn of the 237°T radial of the Newport, Oreg., omnirange and the eastern boundary of the Seattle Oceanic Control Area at lat 43-18-45N, long. 126-40-00W.; (c) Gateway Cedar Int: The intsxn of the 234°T radial of the Hoquiam, Wash., omnirange and the eastern boundary of the Seattle Oceanic Control Area at lat 45-33-00N, long. 126-44-50W." and by (2) revoking the following reporting point: (a) Carp Int: The intsxn of a line bearing 133°T from the Wilmington, N.C., omni stn and the western boundary of the New York Oceanic Control Area.

VOR REPORTING POINTS:

(1) VOR domestic reporting points is (1) amended by adding the following reporting points: (a) Tiverton, Ohio, omni stn: (for acft operg at all alts) (Rdo Facility Chart for Tiverton, Ohio VOR should carry the following notation -- "Report Position to Zanesville Rdo.") (b) Sidney, Ohio, omni stn. (for acft operg at all alts.) (c) Kenton, Del., omni stn. (for acft operg at all alts.) (d) Riverhead, N.Y., omni stn. (for acft operg at all alts.); (e) Knox Int: The intsxn of the Youngstown, Ohio, omnirange 101°T (105°M) and Fitzgerald, Pa., omnirange 240°T (246°M) radials. (for acft operg at all alts.); and by (2) changing the following reporting point to read: (a) Lisbon Int: The intsxn of the Baltimore, Md., omnirange 281°T radial with the Herndon, Va., omnirange direct radial to the Westminister. Md., omni stn.

✓ CONTROL AREA EXTENSION AND CONTROL ZONE - MARTHA'S VINEYARD, MASS.: **The temporary control area extension and control zone at Martha's Vineyard, Mass, published on June 19, 1957, in 22 Federal Register 4319, and in the Airman's Guide, Vol. 12, #7, dated June 11, 1957, page 32, are redesignated to become permanent, effective 2400 EST Oct 1, 1957.**

✓ RESTRICTED AREA AMENDMENT: The following Restricted Areas Amendment shall become effective October 24, 1957:

(Part 608 - Restricted Area - Amendment 208)

(1) Section 608.14, the Tomales Point, Calif., area (R-519) is added to read: Name and Location (chart): Tomales Point, Calif., Restricted Area (R-519) (Sacramento); Description by Geographical Coordinates: beginning at lat 38-13-36, long. 122-59-51; thence to lat 38-13-09, long. 123-01-07; thence to lat 38-12-00, long. 123-01-07; thence to lat 38-10-22, long. 123-00-52; thence to lat 38-08-50, long. 122-59-11; thence to lat 38-09-11, long. 122-58-07; thence to lat 38-10-31, long. 122-58-16; thence to point of beginning; Designated Altitudes: 3000'MSL; Time of Designation: 0800-1600 Mon-Fri. Note: All operns to be limited to VFR conditions; Controlling Agency: Commander, Naval Air Bases 12th ND, Alameda, Calif.

(Part 608 - Restricted Area - Amendment 209)

(1) The restricted area alteration appearing in Item 2, Section 608.12 in Amendment 206 and published in the Federal Register on September 11, 1957 in 22 F.R. 7225 is hereby corrected to read: "--------R-382 formerly D-382" instead of: "R-284 formerly D-284." This correction shall become effective upon publication in the Federal Register.

NOTE: Effective date of Restricted Area Amendment #207 has been changed from Oct 11, to Oct 24, 1957.

✓ LOCATION IDENTIFIERS: The following changes affect the use of the location identifiers:

RML	Detroit, Mich., Detroit Metropolitan Wayne County Arpt (name change)
TTC	Texas Tower #3, Atlantic Ocean, Radiobeacon (assignment)
LF	LaSalle, Man. (change from LU)
LU	St. Agathe, Man. (reassignment)
OT	Ottawa, Ont. (NRC experimental radiobeacon) (redesignation)
UB	Tuk Tuk, N. W. T. (assignment)
UH	Clinton Point, N. W. T. (assignment)
UK	Unnamed Point, N. W. T. (assignment)
UR	King William, N. W. T. (assignment)

✓ ON TOP IFR OPERATIONS: Effective September 15, 1957, the phraseology, "at least 1000 on top" is changed to "VFR conditions on top." Pilots proposing IFR operation on top in lieu of a specific altitude should specify "VFR conditions on top" in filing an IFR flight plan. Operational requirements for operating at least 1000 on top continue to apply for operations in VFR conditions on top.

ON REQUEST REPORTING POINTS: The following on-request reporting points are renamed, designated, redesignated or cancelled and shall become effective as indicated:

DESIGNATED: Effective October 24, 1957

(1) ARCADIA, WISC. (VHF) INTSXN - the intsxn of the 322°M radial of the La Crosse, Wisc. VOR and the 179°M radial of the Eau Claire, Wisc. VOR and the 066°M radial of the Rochester, Minn. VOR.

(2) COMFORT, TEXAS (VHF) INTSXN - the intsxn of the 300°M radial of the San Antonio, Tex. VOR and the 080°M radial of the Rocksprings, Tex. VOR.

(3) FABER, VA. (LF and VHF) INTSXN - the intsxn of the SW crs of the Gordonsville, Va. LFR and the 098°M radial of the Montebello, Va. VOR.

(4) FOUNTAIN CITY, WISC. (VHF) INTSXN - the intsxn of the 307°M radial of the La Crosse, Wisc. VOR and the 186°M radial of the Eau Claire Wisc. VOR and the 069°M radial of the Rochester, Minn. VOR.

(5) HAMILTON, OHIO (LF and VHF) INTSXN - the intsxn of the 022°M radial of the Cincinnati, Ohio VOR and the 155°M bearing to Cincinnati, Ohio LFR.

(6) HUDSON, N.Y. (VHF) INTSXN - the intsxn of the 184°M radial of the Albany, N.Y. VOR and the 280°M radial of the Chester, Mass. VOR.

(7) LUCAS, TEX. (VHF) INTSXN - the intsxn of the 233°M radial of the Dallas, Tex. VOR and the 330°M radial of the Britton, Tex. VOR.

(8) OZONA, TEX. (VHF) INTSXN - the intsxn of the 086°M radial of the Ft Stockton, Tex. VOR and the 298°M radial of the Rocksprings, Tex. VOR.

(9) STARKVILLE, N.Y. (VHF) INTSXN - the intsxn of the 297°M radial of the Albany, N. Y. VOR and the 022°M radial of the De Lancey, N.Y. VOR.

REDESIGNATED: Effective September 26, 1957

(1) LIVERPOOL, PA. (VHF) INTSXN - the intsxn of the 287°M radial of the TowerCity, Pa. VOR and the 199°M radial of the Selinsgrove, Pa. VOR.

(2) REINHOLDS, PA. (VHF) INTSXN - the intsxn of the 238°M radial of the Allentown, Pa. VOR and the 321°M radial of the West Chester, Pa. VOR.

(3) SANGER, PA. (VHF) INTSXN - the intsxn of the 081°M radial of the Harrisburg, Pa. VOR and the 140°M radial of the Tower City, Pa. VOR.

REDESIGNATED: Effective October 24, 1957

(1) CONCORD, MD. (LF) INTSXN - the intsxn of the 053°M bearing to Dover, Delaware Rbn, and the 332°M radial of the Salisbury, Md. VOR.

(2) DALEVILLE, VA. (VHF) INTSXN - the intsxn of the 060°M radial of the Pulaski, Va. VOR and the 360°M radial of the Roanoke, Va. TVOR.

(3) FLY CREEK, N.Y. (VHF) INTSXN - the intsxn of the 128°M radial of the Syracuse, N. Y. VOR and the 004°M radial of the De Lancey, N.Y. VOR.

(4) GAP MILLS, W. Va. (VHF) INTSXN - the intsxn of the 017°M radial of the Pulaski, Va. VOR and the 260°M radial of the Montebello, Va. VOR.

(5) GRAFTON, N.Y. (VHF) INTSXN - the intsxn of the 112°M radial of the Albany, N.Y. VOR and the 332°M radial of the Chester, Mass. VOR.

(6) HENSLEY, TEX. (VHF) INTSXN - the intsxn of the SE crs of the Ft Worth (Carter) Tex. ILS lclzr and the 233°M radial of the Dallas, Tex. VOR.

(7) SABINAL, TEX. (VHF) INTSXN - the intsxn of the 334°M radial of the Cotulla, Tex. VOR and the 123°M radial of the Rocksprings, Tex. VOR.

CANCELLED: Effective October 24, 1957

(1) ALANREED, TEX. (LF) INTSXN - the intsxn of the E crs of the Amarillo, Tex. LFR and the NE crs of the Clarendon, Tex. LFR.

(2) CONWAY, TEX. (LF) INTSXN - the intsxn of the E crs of the Amarillo, Tex. LFR and the NW crs of the Clarendon, Tex. LFR.

(3) KNOX, PA. (VHF) INTSXN - the intsxn of the 246°M radial of the Fitzgerald, Pa. VOR and the 105°M radial of the Youngstown, Ohio VOR (changed to compulsory)

(4) LEBEC, CALIF. (LF) INTSXN - the intsxn of the N crs of the Camarillo, Calif. LFR and the NW crs of the Newhall, Calif. LFR.

CANCELLED: Effective September 26, 1957

(1) HEREFORD, MD. (VHF) INTSXN - the intsxn of the 045°T radial of the Herndon, Va. VOR and the 346°T radial of the Baltimore, Md. VOR.

HOLDING PATTERNS: The following holding patterns have been designated, redesignated or cancelled as indicated:

DESIGNATED: Effective October 24, 1957

(1) GRAND PRAIRIE, TEX. (VHF) INTSXN - direction of holding - SW on 233°M radial of the Dallas, Tex. VOR; direction of turns - right; time - 1 min.; min alt 2000'.

(2) LUCAS, TEX. (VHF) INTSXN - direction of holding - SW on 233°M radial of the Dallas Tex. VOR; direction of turns - right; time - 1 min; min alt 2000'.

(3) FLY CREEK, N.Y. (VHF) INTSXN - direction of holding - NW on 128°M radial of the Syracuse, N.Y. VOR; direction of turns - right; time - 1 min; min alt 4500'.

(4) GAP MILLS, W. VA. (VHF) INTSXN - direction of holding - NE on 260°M radial of the Montebello, Va. VOR; direction of turns - left; time - 1 min; min alt 6000'.

(5) DALEVILLE, VA. (VHF) INTSXN - direction of holding - NE on 060°M radial of the Pulaski, Va. VOR; direction of turns - right; time - 2 mins; min alt 6000'.

(6) FABER, VA. (LF and VHF) INTSXN - direction of holding - SW on SW crs of the Gordonsville, Va. LFR; direction of turns - right; time - 1 min; min alt 4500'.

(7) GRAFTON, N.Y. (VHF) INTSXN - direction of holding - E on 112°M radial of the Albany, N.Y. VOR; direction of turns - right; time - 1 min; min alt 5500'.

(8) HUDSON, N.Y. (VHF) INTSXN - direction of holding - N on 184°M radial of the Albany N.Y. VOR; direction of turns - right; time - 1 min; min alt 3000'.

(9) STARKVILLE, N.Y. (VHF) INTSXN - direction of holding - E on 297°M radial of the Albany, N.Y. VOR; direction of turns - right; time - 1 min; min alt 3000'.

REDESIGNATED: Effective October 24, 1957

(1) DOVER, DEL. (Rbn) - direction of holding - SW on 053°M inbnd brg (233°M outbnd); direction of turns - left; time - 2 mins.

(2) HENSLEY, TEX. (VHF) INTSXN - direction of holding - SE on SE crs of the Ft Worth (Carter), Tex. ILS lclzr; direction of turns - right; time - 1 min; min alt 2000'.

CANCELLED: Effective September 26, 1957

(1) HEREFORD, MD. (VHF) INTSXN - direction of holding - N on 346°T radial of the Baltimore, Md. VOR; direction of turns - right; time - 1 min; min alt 3000'.

RADIO INTERFERENCE (General): You can do your part toward reducing radio interference to aeronautical services from non-aeronautical sources which may be noted during flight if such is reported promptly to a CAA facility (preferably after landing) or to any FCC field office. Reports should state the frequency or channel affected, description of the interference, and the geographical area where the interference was observed. If known, reports should give the apparent cause of the interference such as radio stations, call letters when such can be identified, industrial plants, diathermy machines, power lines, television receivers, etc. Do not report interference caused by normal frequency congestion, i.e., signals from other aircraft using the frequency."

IDENTIFICATION OF AIRCRAFT: Pilots are requested to exercise care that the identification of their aircraft is clearly transmitted in each contact with an ATC facility. Also, pilots should be certain that their aircraft are clearly identified in ATC transmissions before taking action on an ATC clearance. Garbled aircraft identifications in radiotelephone transmissions should never be taken for granted but should always be checked.

ALTIMETER SETTING SERVICE - AIR ROUTE TRAFFIC CONTROL CENTERS:

The following governs issuance of altimeter settings by Air Route Traffic Control Centers to aircraft operating on an IFR flight plan and in direct communication with the Center:

1. Altimeter settings will be furnished, when requested by a pilot operating on an IFR flight plan, for those weather reporting stations within the center's control area.

2. Requests for altimeter settings at weather reporting stations not within the center's control area will be referred to the appropriate Air Traffic Communications Station.

3. The time and location of the weather station reporting the altimeter setting will be specified. The following phraseology will be used: The (Time) (Station Location) Altimeter (Setting). Example: "The One Four Three Zero Columbus Altimeter Three Zero Zero Two."

SIMULTANEOUS VOICE TRANSMISSIONS FROM A SINGLE LOCATION: At several CAA facilities, simultaneous voice transmissions are made from a single location. For example, the New York ATCS controls the transmitters at Idlewild, LaGuardia, Newark, Colts Neck, Caldwell and Wilton L/MF or VOR facilities.

To provide a uniformly brief announcement, generally for broadcast purposes, the name of the controlling facility, followed by the word AREA will be used, e.g., THIS IS NEW YORK AREA RADIO, etc.

Calls from aircraft will be answered using the name of the station as stated by the pilot, e.g., a pilot calling "Newark Radio" will be answered by the New York ATCS, "THIS IS NEWARK RADIO, etc."

The word "AREA" signifies that the transmission from the named (controlling) location is emanating simultaneously from one or more remotely controlled facilities, having a different name or names, as indicated in the ANRA Section of the AIRGI and/or applicable RF Charts.

A NOTAM will be issued from those facilities affected by the foregoing when the change to this procedure is made.

MINIMUM EN ROUTE ALTITUDES: The following minimum en route IFR altitudes are amended as follows, effective October 24, 1957.

Section 610.12 Green Civil Airway 2
is amended to read in part:

AIRMAN'S GUIDE CORRECTION: Correct Vol. 12, No. 13, dated September 3, 1957, page 7 under Restricted Area Amendment Part 608 Amendment 207. Change effective date from October 11 to October 24, 1957.

FLIGHTS INTO CANADA: Pilots are requested to determine whether customs services will be available at the Canadian airport of first intended landing. Canadian airports where customs services are available are listed in the International Flight Information Manual, Volume 7, dated May 1956, or the information may be obtained from CAA Air Traffic Communications Stations.

PITTSBURGH-INDIANAPOLIS CENTER AREA BOUNDARY CHANGES: The center area boundary between Pittsburgh and Indianapolis Centers is redesignated as follows: beginning at the intsxn of the S edge of Green 4 and an arc of 21 s mi centered on Zanesville rdo bcn; proceeding thence clockwise via this arc to its intsxn with the E edge of Victor 133; thence via the E edge of Victor 133 to its intsxn with an arc of a radius of 20 s mi centered on the Parkersburg VOR; thence clockwise via this arc to its intsxn with the N edge of Victor 38; thence via the N edge of Victor 38 to its intsxn with the present Washington-Pittsburgh Center area boundary (15 mi NW of the Elkins VOR).

EL PASO-SAN ANTONIO FLIGHT ADVISORY AREA BOUNDARY CHANGES: The El Paso-San Antonio flight advisory area boundary changes were made as follows: 29-48-30N, 102-00-00W to 30-19-00N, 101-26-00W to 30-30-00N, 101-20-00W to 30-30-00N, 100-12-00W to 30-43-00N, 100-10-00W to 30-54-00N, 99-48-30W to 31-44-00N, 99-20-00W. The above change was effective June 6, 1957.

AERONAUTICAL CHARTS OF THE U. S. COAST AND GEODETIC SURVEY

New editions of the charts listed below will be published in about one month making former prints obsolete for use in aviation. Orders for these particular charts should be kept to a minimum until new edition is printed.

Albuquerque	Oklahoma City	WAC 467
Austin	Dallas-Ft. Worth Local	WAC 468
Corpus Christi	WAC 136	WAC 469
Del Rio	WAC 408	

NEW EDITIONS

A new edition or new chart for the charts listed below is now available for use. Former prints should be destroyed or stamped "OBSOLETE FOR USE IN AVIATION."

AIRPORT AND RADIO NOTICES

LEGEND

(3-31) - Month and day item was reported.

** - New or revised airport, caution area or miscellaneous data. Pilots should inscribe this information on charts and records.

✱ - New or revised radio data. Pilots should inscribe this information on charts and records.

NOTE: Because of space limitations, such data usually are cited only once.

ALABAMA: ANNISTON-RADIO: VOR courses 360°-07° have bends & rufness out of tolerance. (12-1)

AUBURN-OPELIKA ARPT: Lgtg facs inop. (7-6)

BESSEMER-DURHAM ARPT: Caution-auto drag strip runs parallel to sod landing strip with separation of 50'. Auto racing is NOT done on rnwy. Drag strip ends are marked. Racing is done on Sun only. (9-28)

BIRMINGHAM-RADIO: VOR operg test basis only, at lat 33-40-11, long. 86-53-58, about 10 n mi NW Birmingham Mun arpt. (12-14) Caution-all arwys and Ints based on Birmingham or Meridian VORs are not usable for navigational purposes until the stns are recmsnd at new lctns. (4-18) Until cmsng VOR, V7E temp designated BHM LFR to Tanner Int. via ADF track of 350° mag from BHM LFR, MEA 4500'. (8-27)

BIRMINGHAM ARPT-TOWER: Aug 7, ILS MM and LMM shut down-relctn. (8-7) FLD: Caution-tfc operg in area from 165° clockwise thru 235° not visible from twr to dist of 4 s mi. Rnwy 8-26 perm clsd to high performance single engine conventional ldg gear type acft, including T-6. Rnwy 18-36 clsd between 0800-1700 daily unless otherwise advised by ctl twr. (7-9) Acft requiring after-burners prohibited use of arpt. Exten. const work in progress SW end NE/SW rnwy. (4-9) ILS apch lgt lane shut down until approx thru Nov for relctn due rnwy ext. (5-1)

DOTHAN-NAPIER FLD: Caution-helicopters from Rucker Army Air Base trng.

EVERGREEN-RADIO: VOR radials 320° thru N usable acct severe scalloping and bends.

EVERGREEN-MIDDLETON ARPT, 20, MSY-ATL: Rnwy and threshold lgts inop. (2-6)

HUNTSVILLE-RADIO: VOR radials 005°-030° have roughness and bends out of tolerance.

MOBILE-RADIO: June 19, VOR arwy radials flgt-checked. Radial 018°-028° out of tolerance due to severe scalloping. (6-19)

MOBILE-BATES FLD-TOWER: June 19, ILS not to be used for automatic apch below 300'. Glide slope inop-equip. and const vcnty transmitter bldg. (8-22) FLD: Due space shortage, all transient and lcl acft not permitted parking space on admin bldg ramp xcpt enplaning and deplaning passengers. Use facs E side of fld. (11-10) Unlgtd trees penetrate apch zone to all rnwys. Use caution. 200' and 1/2 mi is absolute tk-off min for all acft.

MONTGOMERY-SPECIAL NOTICE: All acft operg in the Maxwell AFB and Dannelly Fld ctl zones are cautioned to maintain cont rdo ctc with the appropriate ctl twr. Exten flying of both conventional and jet type acft in progress at both arpts. (4-19)

MONTGOMERY-DANNELLY FLD-TOWER: About Sept. 26, trans & rcvr 119.7 will be cmsnd and trans & rcvr 119.5 mc will be decmsnd. (9-12) FLD: Dips in E/W rnwy 1500' from E end. Lgtd ditch approx 200' NE of apch end of rnwy 21. Twr unable to ctl taxiing acft on E/W taxiway from a point adj to ANG hangar to W end. Use caution taxiing.

MUSCLE SHOALS-RADIO: VOR courses 020°-050°, 110°-150° and 285°-335° clockwise from stn out of tolerance beyond 15 n mi acct scalloping and bends. (11-2) About Sept. 26, VOR will be relctd to lat 34-42-24, long. 87-29-27;freq change from 117.5 mc to 109.6 mc.

ARIZONA: AJO ARPT: Beacon and lgts inoperative. (6-18)

CLEMENCEAU-COTTONWOOD-CLEMENCEAU ARPT: All servicing temp suspended. Fld open days only. Rnwy avail. ngts upon prior req. Emerg. only. (4-23)

COCHISE-RADIO: VOR/DME coverage 015°-045°, 30 n mi;090°-110°, 40 n mi;190°-215°, 35 n mi;215°-235°, 30 n mi;235°-255°, 35 n mi at MEA. (5-8)

FT. HUACHUCA-SPECIAL NOTICE: Caution-extensive artillery firing and drone flying in immediate vicinity. Two-way rdo and prior clearance from Libby AAF twr required before flgt within R-181. Libby twr gds: 121.5, 122.5, 126.3, 126.15, 243.0 mc. Rdo bcn (FHU 410 kc) and TVORW (FHU 111.6 mc) only rdo aids to air nav suitable for normal use. Other experimental rdo nav aids oper from time to time not suitable for use under any circumstances. Army Electronic Proving Ground reports that on several occasions, civil acft have been endangered by failure to observe the requirements listed.

ARIZONA:

GILA BEND-RADIO: VOR has slow bends and scalloping starting at 17 n mi and 8000' MSL on 247° radial beyond tolerance. (6-24)

GLEN CANYON DAM SITE-SPECIAL NOTICE: Pilots should not fly below canyon rim. Cables strung across canyon. (11-1)

GRAND CANYON-SPECIAL NOTICE: Pilots should not fly below rim of canyon. Cable not readily visible to acft strung across canyon lctd near Quartermaster Point in Lower Granite Gorge between Pierce Ferry and Spencer Canyon. (1-2)

PHOENIX AREA-SPECIAL AIR TRAFFIC RULES: Aircraft operg under VFR or VFR conconditions shall not be operd Mon thru Fri from 0600M to 1800M on Green Arwy #5 and Victor Arwy 16 W of Phoenix in the areas described below except at the altitudes prescribed therefor unless special permission is obtained from Air Traffic Control. From 112°28' to 112°35', which is the area between north-south lines drawn thru the Perryville FM and the town of Buckeye, between 700' above the surface and 5000'MSL, regardless of weather conditions. Further, when the reported ceiling at Phoenix is less than 8000' acft shall not be operd at alts above 2000' MSL and below 4000'MSL in the area between 112°16' and 112°28', which is the area between north-south lines drawn thru the town of Tolleson and Perryville FM. When the reported ceiling at Phoenix is 8000' or more, acft shall not be operd at alts above 7000'MSL and below 9000'MSL in the area between 112°10' and 112°28', which is the area between north-south lines drawn thru the town of Tolleson and the east edge of Glendale and the Perryville FM. (8-15)

PHOENIX-SKY HARBOR ARPT-SPECIAL NOTICE: Following changes in instrument apch procedures: LFR procedure: Initial approach from Perryville FM 4000, from Tolleson Int 2600. Missed apch: Climb to 2500 on W course PHX LFR, make right climbing turn returning to LFR. Hold on E course LFR at 5000 in standard pattern within 15 miles. VOR procedure: Initial apch from Perryville FM 4000, from Tolleson Int 2600. Missed approach: Climb to 2500 on radial 258, make a right climbing turn, returning to VOR. Hold east of VOR on radial 076 at 5000 in standard pattern within 15 mi. Tolleson Int-Int GBN VOR radial 027 and PHX VOR radial 250 or W course PHX LFR. All other items these procedures unchanged. (6-14)

PHOENIX-SKY HARBOR ARPT: Clsd to mil F-89 type acft or acft rqrg use of after burners for tk-off, xcpt prior permission arpt manager. (12-7) Men & equip. along N edge rnwy 26L from apch end to a point approx 2000' W. (8-23)

PRESCOTT-RADIO: VOR coverage 185°-225°, 35 n mi at 10,000';135°-145°, and 165°-185°, 30 n mi at 10,000'.

SAN SIMON-RADIO: VOR coverage 030°-070°, 30 n mi; 160°-260°, 30 n mi. (7-17)

SCOTTSDALE-THUNDERBIRD #2 ARPT: Closed. (3-26)

TUCSON-RADIO: VOR/DME coverage: 360°-050°, 35 n mi at 11,000'; 050°-060°, 22 n mi 11,000'; 060°-075°, 35 n mi 11,000';075°-085°, 21 n mi 11,000';090°-170°, 40 n mi 12,000'; 225°-230°, 40 n mi 7,000';330°-345°, 35 n mi 11,000';345°-360°, 25 n mi 11,000'. (7-17)

TUCSON ARPT-SPECIAL NOTICE: As required, target towing on a direct route off arwy to Ajo, Ariz. to be conducted wk-ends- caution. (2-15)

TUCSON-DAVIS MONTHAN AFB-RADIO: USAF UHF/DF steers unreliable beyond 35 mi at or below the following alt: (a) NW quad 10,000'; (b) SW quad 10,000';(c) SE quad 12,000' (d) NE quad 13,000'. (6-20)

YUMA-RADIO: VOR coverage 280°-300°, 30 n mi at MEA. (5-18)

YUMA-VINCENT AFB: All acft not equipped with 2-way rdo are advised to use extreme caution while operg within a 5 mi radius of arpt due to heavy jet tfc. B-57 type acft towing 10,000' of cable and tow target in vcnty. All acft refrain from flying in close proximity B-57 type acft in Yuma area. (2-11)

ARKANSAS: BLYTHEVILLE-SPECIAL NOTICE: All acft operg under VFR adj to Blytheville AFB are advised to use extreme caution due to extensive IFR jet tfc. (7-18)

PINEBLUFF-RADIO: VOR shut down. Durg shutdown, VOR flgts authorized to use PBF homing fac in lieu VOR xcpt V16S TXK to PBF unusable. Ints. and alts as charted. (3-22)

TEXARKANA-RADIO: DME coverage 145°-235°, 1700'MSL 30 n mi; 235°-270°, 1800'MSL 35 n mi. (5-21)

CALIFORNIA: APPLE VALLEY ARPT: Caution-const-men and equip on fld. (4-26)

ARCATA-RADIO: VHF/DF operg test basis. Freqs: 122.1, 126.7, 121.5, 135.9 mcs. Coverage 40 n mi at MEA xcpt 030°-040°, 11,000';040°-060°, 12,000';060°-090°, 13,500'.

BAKERSFIELD-KERN CO ARPT-TOWER: Effect. Sept. 29, twr hrs opern will be 0600-2200. (9-5)

CALIFORNIA: BASS LAKE-WISHON ARPT: Clsd to all operns until further notice. (8-23)
BECKWORTH-PLUMAS CO. ARPT: Clsd due rnwy resurfacing. (6-24)
BLYTHE-RADIO: VOR/DME coverage 45 n mi except 26 n mi 180°-200°, 30 n mi 280°-300°, 20 n mi 300°-320°, 35 n mi 345°-015° at MEA. (8-20)
BONSALL-SHEARER'S RANCH ARPT: Abandoned until further notice. (2-4)
BRAWLEY ARPT: Rnwy 12-30 clsd. Use parallel dirt rnwy. (7-26)
CAMARILLO-RADIO: All courses have multiples. (6-17)
CRESCENT CITY-RADIO: VOR arwy radials flgt-checked. Courses 90°-330° usable dist 22 n mi; 350°-90°, 26 n mi at 7000'; 43 n mi at 8000'.
DAGGETT-RADIO: VOR flgt-checked on arwy radials only.
DINUBA-ALTA ARPT: Arpt unlgtd. (4-22)
DIXON ARPT: Closed. (8-30)
ELSINORE ARPT: Caution - glider activity week ends. Squirrel holes S edge of lndg area.
FAIRFIELD-TRAVIS AFB-RADIO: LF rng has splits and multiples beyond 20 mi. (8-27)
FILLMORE-RADIO: VOR coverage 320°-355°, 35 n mi at 11,000'; 280°-320°, 26 n mi at 11,000'.
FT. JONES-RADIO: VOR has light course roughness all quads. Only arwy radials flight-checked. About Sept. 19, VOR will be shut down until approx Oct 17 - modernization. Durg this period the following arwys will be unusable for IFR opern: V23 Red Bluff - Talent Int.; V23E Fort Jones - Klamath Junction Int. The Bray Int. will be unusable.
FORTUNA-RADIO: VOR has lgt to moderate scalloping beyond 26 n mi. Only arwy radials flgt-checked. (10-6) DME coverage 335°-350°, 43 n mi at 3000'; 350°-10°, 43 n mi at 8000'; 10°-30°, 43 n mi at 9000'; 30°-120°, 35 n mi at 9000'; 120°-150°, 35 n mi at 6500'; 150°-335°, over water not checked.
FRANKLIN ARPT: Rnwy 15-33 clsd. (7-12)
FRESNO AIR TERMINAL-TOWER: Sept. 16, ILS glide slope shut down until approx Oct 19 - relctn. (9-13) FLD: Extreme caution advised in vicinity of arpt, particularly when using VOR arwys. Jet acft climbing and descending in areas of extended centerlines rnwys 29-11 and areas N and E of arpt. Const and equip. both ends rnwy 29-11 and adj taxiways.
**GLENDALE-GRAND CENTRAL ARPT: NW/SE taxi strips SW side of fld perm clsd. Extensive const in progress. Fld clsd to all acft at sunset. (10-5)
LONG BEACH-RADIO: DME coverage 43 n mi as follows: 280°-305°, 5000'; 305°-340°, 7000'; 340°-040°, 12,000'; 040°-070°, 8000'; 070°-100°, 7000'; 100°-280°, 4000'. (9-13)
LONG BEACH ARPT-TOWER: ILS glide slope subject to indef shutdown periods during arpt const. VHF/DF bearings unreliable below 12,000' MSL SW quad between 200° and 230° true. (5-6) FLD: Several 230' MSL portable oil derricks NW, W and S of fld. No fuel servicing avail. for civil acft 2400-0600. Neon apch lgt lane rnwy 30 discontd indefinitely. (1-1) Caution - temp p-line with wooden poles 29' high serving const camp erected approx 315' S of and roughly parallel to apch end rnwy 30 for 800'. (8-22) Rnwy 30 clsd all lndgs 0700-1500P wk-days only due 100' booms in apch area. First 800' rnwy 30 and adj taxiways clsd const; 6200' avail. lndgs and tk-offs. Rnwy 12 clsd. Until further notice, straight-in ILS lndg min rnwy 30 daylgt hrs only - 500'/1 mi. (6-25)
LOS ANGELES-RADIO-SPECIAL NOTICE: Transcribed wea bdcasts shut down - modernization. Manual bdcast continues on VOR and both VOR & LFR combined. (4-26)
★LOS ANGELES-RADIO: Aug 28, idents of following Fan Markers are: Downey - dot dash; La Habra - dash dot; Hollywood Hills - 4 dashes. VOR coverage 275°-315°, 30 n mi at min en route alt. Light to moderate scalloping below 3000' MSL. (10-23)
LOS ANGELES INTERNATIONAL ARPT-TOWER: VHF/DF unreliable 045°-060° below 13,000' MSL beyond 30 n mi. (4-19) FLD: Use paved areas only. New lgtd rnwy 16-34 approx 4000' W of Sepulveda Blvd clsd - avail. 30-min req thru twr. Equip. crossing rnwy. Durg VFR wea conditions, civil acft ctc twr on 118.9 mc or listen 118.9 mc, trans 122.7 mc at least 10 mi out. During IFR wea, civil acft contact Apch Ctl on 118.1 or 119.3 mc, or listen 118.1 or 119.3 mc and trans 122.7 mc. USAF-NAVY-CG: VHF equipped acft contact Apch Ctl on 118.1 or 119.3 mc. UHF equipped acft contact Acph Ctl on 250.2 or 269.0 mc. Pilots are urged to use extreme caution when operg off-shore W of arpt. All jet acft departing rnwys 25L-25R climbing in VFR conditions use a 200° departure corridor which originates at a max of 3000' MSL, approx intsxn of extended centerlines of above rnwys with the shoreline. Acft proceeding E-bound from Malibu or Pt. Dume intsxns in VFR conditions making a track which approx extended centerlines of above rnwys are cautioned not to descend below 4000' MSL until passing shoreline or Los Angeles Omni, unless cleared otherwise by ATC. Jet acft pat downwind leg is 1500' MSL. Acft not intending lndg at arpt should avoid apch areas to W of arpt and E of arpt between Downey rbn and arpt below 3000' in VFR wea. If desiring to cross apch area below 3000' contact Los Angeles Apch Control

CALIFORNIA: before crossing. Recommended cross tfc plan crossing course at 3000' or above ceiling permitting, directly over arpt or between LFR and arpt. Avoid shoreline W due hi-performance jet acft. Due to non-visibility twr unable to ctl tfc last 2400' rnwy 34. Nov. 30, transmissiometer cmsnd, furnishing rnwy visibility for rnwys 25L and 25R. Visibility to be added to observations when prevailing visibility is less than 1-1/2 mi. Hi-intensity apch lgts rnwy 25L coverted to centerline system extending 3000' E of rnwy pavement. Apch lgt lane sequenced flashers avail. on test basis at pilot's request. Flashers extend from 1200' to 3000' from end rnwy 25L. (7-11)
LUCERNE VALLEY-DOUBLE J RCH ARPT: Length of strip reported increased to 3000'.
MENDOTA ARPT: New arpt reported: Lctd 1/4 mi E; elev: 174'; 1 rnwy - (15-33) - 2300' x 90' (dirt & sand compact); remarks: 6' fence at each end. (7-23)
MOFFETT FIELD-SPECIAL NOTICE: Due to hvy jet tfc, acft operg vicinity Moffett Field control zone in VFR wea exercise extreme caution passing thru ctl zone at alts below 2000' VFR and below 4000' during stratus conditions. (6-17)
MONTEREY-PENINSULA ARPT-RADIO: Soon, ILS will be cmsnd. Lclzr freq: 110.1 mc. Ident: MRY. Lctd 1000' SE on a centerline of NW/SE rnwy. Glide slope freq: 334.4 mc. Lctd 825' from apch end NW/SE rnwy and 236' N of centerline of rnwy. Glide angle: 3.0° Apch bear.: 84°. LMM freq: 260 kc, Ident: RY. MM lctd 0.60 mi from apch end rnwy. LOM freq: 278 kc, Ident: MR. OM lctd 5.14 mi from apch end rnwy. Disregard spurious signals. (9-13)
OAKLAND-SPECIAL NOTICE: Pilots proposing transbay flgt should ascertain that VFR wea exists within both San Francisco and Oakland Control Zones, or should obtain ATC clearance for flgt within a ctl zone when wea is less than VFR, since ceiling and visibility mid-bay is frequently less than at the two terminals. Rotating beam ceilometer in operation. Hereafter ceiling observations of less than 1500' will usually pertain to the middle marker location. Tfc operg in VFR wea should avoid vcnty of Alameda NAS. Extensive tfc including jets operate in tfc pat up to 2000' within a radius of 1.7 n mi of fld. Exercise extreme caution in these areas.
OAKLAND-RADIO-SPECIAL NOTICE: Military acft planning to use VHF communications and proposing IFR flight into Oakland, Alameda NAS or Hayward should contact Oakland Approach Control on 118.1 mc, or proposing IFR flight into San Francisco should contact San Francisco Approach Control on 118.5 mc. Communications during IFR flight should not be conducted with Oakland Approach Control or San Francisco Approach Control utilizing, the freq 126.18 mc unless 118.1 or 118.5 mc is not avail. Due to extreme congestion, 126.18 mc is not considered a suitable communications channel for IFR flight into Oakland, Alameda NAS, Hayward or San Francisco. (7-18)
OAKLAND-RADIO: VOR coverage 35 n mi N thru E at min instr alt. (1-14) DME coverage 30°-60°, 26 n mi at 5000'; 60°-80°, 35 n mi at 5000'; 280°-290°, 35 n mi at 4000'; 340°-350°, 35 n mi at 6000'; 350°-030°, 17 n mi at 4000'.
OAKLAND-AIR ROUTE TRAFFIC CONTROL CENTER-SPECIAL NOTICE: Jet approaches and lndgs at Oakland, San Francisco and Sacramento, as depicted on apch plates JAL-294, RNG, JAL-375-RNG and JAL-358-ADF, are to be used for emerg only. (4-24)
OAKLAND-METROPOLITAN-OAKLAND INTNL ARPT-TOWER: VHF/DF coverage 40 n mi at MEA xcpt 340°-030°, 6500'; 030°-040°, 8000'; 040°-060°, 7000' MSL. (8-6) FLD: Dredging and clam shell equip. working S of lndg area. All booms and equip. lgtd and mrkd. Use extreme caution when flying over or within this area. Non-rdo acft rqrd to req permission from twr for clearance; make left hand pat before lndg. (10-30) Transmissometer cmsnd giving rnwy visibility observations rnwys 27L &R. (8-22)
OCEANSIDE-RADIO: July 10, VOR shut down until approx Oct 1 - modernization. During this period the following arwys will be affected. V23 LGB-SAN; V208 CAX-TRM when usable. Flights departing LAX via V208 will be cleared from intsxn LAX VOR radial 170 and LGB VOR radial 205 direct to Avalon LF Int. R65 to OCN durg shutdown period.
ONTARIO-RADIO: VOR/DME coverage 135°-150°, 26 n mi at 7000'; 150°-200°, 17 n mi at 7000'; 200°-280°, 35 n mi at 7000'; 330°-350°, 26 n mi at 13,000'; 350°-360°, 35 n mi at 13,000'. (7-30)
ONTARIO INTNL ARPT: Acft not lndg at arpt should avoid apch and depart areas E and W below 3000' MSL in VFR wea. Twr tfc operg in E quad should exercise caution acct exten simulated IFR apchs including jets VFR wea and actual apchs IFR wea. (3-13) Make turns on or off taxiway S side rnwy 7-25 at intsxns only. Eng run-ups in take-off position rnwy 7-25 prohibited less than 200' from ends of rnwy as marked by yellow paint lines either side. Formation take-offs and lndgs prohibited xcpt ANG 196th Fighter Interceptor acft. Due to non-visibility twr unable to ctl tfc on ANG ramp and taxiway leading to ANG hangar area.

CALIFORNIA: PALMDALE-RADIO: VOR coverage 120°-150°, 35 n mi at 10,000'; 150°-180°, 35 n mi at 9000'. (3-14)
PASO-ROBLES-RADIO: DME coverage 220°-235°, 35 n mi at 6000'; 235°-245°, 26 n mi at 6000'; 245°-270°, 35 n mi at 6000'. (7-5)
POMONA-BRACKETT FLD: Operative during reconstruction. Caution-men and equip.
RED BLUFF-RADIO: DME coverage 225°-245°, 35 n mi at 10,000'. (6-30)
SACRAMENTO ARPT: Twr tfc operg in SW quad should exercise caution acct extensive simulated instr apchs including jets VFR wea, actual apchs IFR wea. (4-2)
SALINAS-RADIO: VOR coverage 20°-95° and 135°-295°, 35 n mi at min instr alt. DME coverage 20°-44°, 26 n mi at 7000'; 44°-49°, 17 n mi at 7000'; 49°-90°, 26 n mi at 7000'; 90°-130°, 43 n mi at 7000'; 130°-145°, 26 n mi at 7000'; 145°-153°, 17 n mi at 7000'; 153°-180°, 26 n mi at 7000'; 180°-225°, 43 n mi at 7000'; 225°-300°, 43 n mi at 5000'; 300°-20°, 43 n mi at 7000'.
SAN DIEGO-RADIO: VOR coverage 50 mi MEA all quads xcpt 20 mi MEA from 310°-330°.
SAN DIEGO-LINDBERGH FLD: 500' W end rnwy 9-27 clsd - jet barrier. (2-29) Men and equip working on rnwy 9-27. (7-12)
SAN FRANCISCO: See Oakland Control Zone Notam.
SAN FRANCISCO-RADIO-SPECIAL NOTICE: Acft not on IFR flgt plan and not desiring IFR apch, requested to make initial call to San Francisco Twr, freq 119.1 mc. (7-25)
SAN FRANCISCO INTNL ARPT: Men and equip working turf areas adj concourses B and D. All acft and equip should be parked 20' or more from existing W edge of paved area concourse B and existing S edge of paved area concourse D. Marked day and ngt. (3-26) Section of deactivated rnwy 18-36 between taxiway C and rnwy 10L-28R clsd perm. (5-18) Do not use for taxiing painted green line 1100' long which connects centerline of W end of rnwy 28R-10L with taxiway A then veers N across adjoining run-up mat toward turf. This is a temp experimental hi-speed exit taxi line. (6-13) Taxiway E from S edge of rnwy 28R-10L to taxiway A clsd. Taxiway B from taxiway D to taxiway G clsd. Taxiway F from W edge of rnwy 1R-19L to taxiway A clsd. Men and equip operg turf areas between taxiways A and B S of term ramp area and S end of rnwys 1L-19R and 1R-19L. (9-9)
SAN FRANCISCO GAP-RADIO: Homing fac unreliable in area 25° thru E to 130°. (11-15)
SAN RAFAEL-SAN FRANCISCO BAY ARPT: Caution - 60' crane and trucks operg daylgt hrs W end rnwy. (5-17)
SANTA BARBARA-RADIO: DME coverage 325°-30°, 26 n mi at 9000'; 30°-45°, 35 n mi at 9000'; 80°-95°, 35 n mi at 4000'; 110°-260°, not checked. (10-23)
SANTA MONICA-RADIO: TVOR radials 030° 075°, 210°, 260° and 323° usable. (1-20)
SANTA MONICA ARPT: Service avail only between 0700-2100 daily. Extreme caution advised during ngt use of fld due to unlgtd open storm drain ditch 175' from S edge of main rnwy. An unlgtd unmrkd difference in elev variable to as much as 25' exists between the open storm drain ditch and taxiway. All taxiways unlgtd. (1-20)
SANTA PAULA ARPT: Work in progress S side of fld. Caution - trucks immediately S of rnwy. Area S of rnwy soft, muddy. (6-8)
SHOSHONE ARPT: Strip clsd for paving. (8-9)
STOCKTON ARPT: Rnwys 11L-29R, 11R-29L and 16-34 clsd due exten const work in progress. Rnwy 4-22 only avail with temp flare pot lgtg. Tetrahedron tied down to indicate active rnwy. Pilots should observe windsock for crosswind indication. Hvy equip crossing SW end rnwy 4-22. Flagman on duty directing gnd tfc. Extreme caution advised at all times. Intensive helicopter training conducted in vicinity of fld between 0800-1700 daily xcpt Sat and Sun. Acft utilizing SCK rdo rng for simulated rng apchs should exercise extreme caution. Min alt for low apchs is 528'MSL. (8-12)
THERMAL-RADIO: VOR and DME coverage 330°-360° to 060°, 20 n mi; 060°-085°, 40 n mi 145°-175°, 40 n mi; 175°-180° to 250°, 20 n mi; 250°-280°, 40 n mi at min en route alt.
THERMAL ARPT: Use rnwys and taxiways only. Blacktop shoulder areas soft. (2-28)
UKIAH-RADIO: DME coverage 43 n mi; 305°-355° at 6500'MSL; 355°-60° at 9000'; 60°-100° at 7000'; 100°-150° at 6000'. 105° thru S and W to 305° over water not checked. (10-11)
UKIAH ARPT: Dirt strip perm clsd. Use surfaced rnwy 15-33 only. (7-9)
VAN NUYS ARPT: Touch-and-go lndgs prohibited on Sat and Sun after 1300. Jet acft make initial apch at 4000'MSL when lndg on rnwy 34; 2300'MSL when lndg on rnwy 16. Tfc direction indicator inop 2300-0700. (2-25)
VICTORVILLE-GEORGE AFB-RADIO: USAF VHF/DF steers unreliable 235°-325° and 360°-045° below 15,000'.
WARNER SPRINGS ARPT: Rnwy hazardous. Soft spots due rodent activity and grading.
WOODLAND-WATTS ARPT: 200' at N end N/S rnwy under const. (9-5)
YUCCA VALLEY ARPT: New arpt reported: 2 mi E; 1 rnwy, 3200'; lgts; BL4; fuel, F2. (1-3)

COLORADO: ASPEN ARPT: Fld clsd approx 30 days due const. (9-4)
CHEYENNE WELLS ARPT: Sand drifts over 3' high - dangerous. (7-5)
COLORADO SPRINGS-PETERSON FLD: Caution - lndg acft - due to rise in terrain at apch end rnwy 21.
CRAIG ARPT: Rnwy clsd for const. Use 2500' strip immediately S rnwy. (8-27)
DENVER-AIR ROUTE TRAFFIC CONTROL CENTER: About Sept 30, Trans and rcvr 124.7 mc will replace 120.7 mc. (9-9)
DENVER-STAPLETON FLD-TOWER: VHF/DF commun unreliable at 40 mi below 14,000' MSL 154°-180° and below 16,000'MSL 181°-243°. VHF/DF bearings reliable in these areas. FLD: Rnwy 8L-26R clsd to operns heavier than DC-3 acft xcpt when absolutely necessary for taxiing W of rnwy 3-21. Hvy air tfc N and E due to extensive instrument trng. During hrs of darkness flashing amber lgt in segmented circle denotes rgt hand tfc. 200' open ditch N side W end rnwy 8R-26L - flag marked day hrs, flashing red ngt hrs. (3-26)
EADS ARPT: Sand drifts over 3' high - dangerous. (7-5)
GRAND JUNCTION-WALKER ARPT: Rnwy 11-29 and neon apch lgts inop until about Jan 1, 1958 for reconst of rnwy and installing rnwy lgts. (8-20)
PARSHALL-SPECIAL NOTICE: Avoid canyon flying Williams Fork Dam site 5 mi SE. Hi-tension cables across canyon 200' above floor. (4-17)
PUEBLO-SPECIAL NOTICE: Controlled Firing (demolition) Area for use of the Pueblo Ordnance Depot established within the following described area: bounded on N by lat 38-22-00; E long. 104-21-22; S lat 38-18-00; W long. 104-22-50. (4-30)
PUEBLO MEMORIAL ARPT: 2600' N end rnwy 17-35 clsd to hvy acft. Men and equip on fld daylgt hrs. Ctc ctl twr for current fld conditions. (9-4)
CONNECTICUT: HARTFORD-BRAINARD FLD: Only NE and extreme SW ends of dike lgtd.
NEW HAVEN ARPT: Arpt bcn not rotating. (8-24)
SALEM ARPT: Reported reactivated. 41-30N, 72-14W; lctd 2.4 n mi E; elev 420'; 2 rnwys-E/W 2200', NW/SE 1950'; remarks - windsock left of end SE rnwy. (7-27)
SIMSBURY ARPT: Experimental dropping of parachutes on fld during VFR wea. days Mon-Fri. Fld occasionally clsdby standard mrkr.
WILTON-RADIO: DME coverage 270°-285°, 35 n mi at 3000'; 230°-360°, 35 n mi at 3000'; 360°-015°, 35 n mi at 2500'. (6-14)
DELAWARE: FT MILES-SPECIAL NOTICE: Firing will be conducted at the Anti-acft Artillery Ranges, at 1200 and 1800 EST, on following dates: Restricted Area #2 (S range S of Bethany Beach extending approx 10.5 n mi off-shore) Oct 1-4, 7-11, 14-18, inclusive. (9-11)

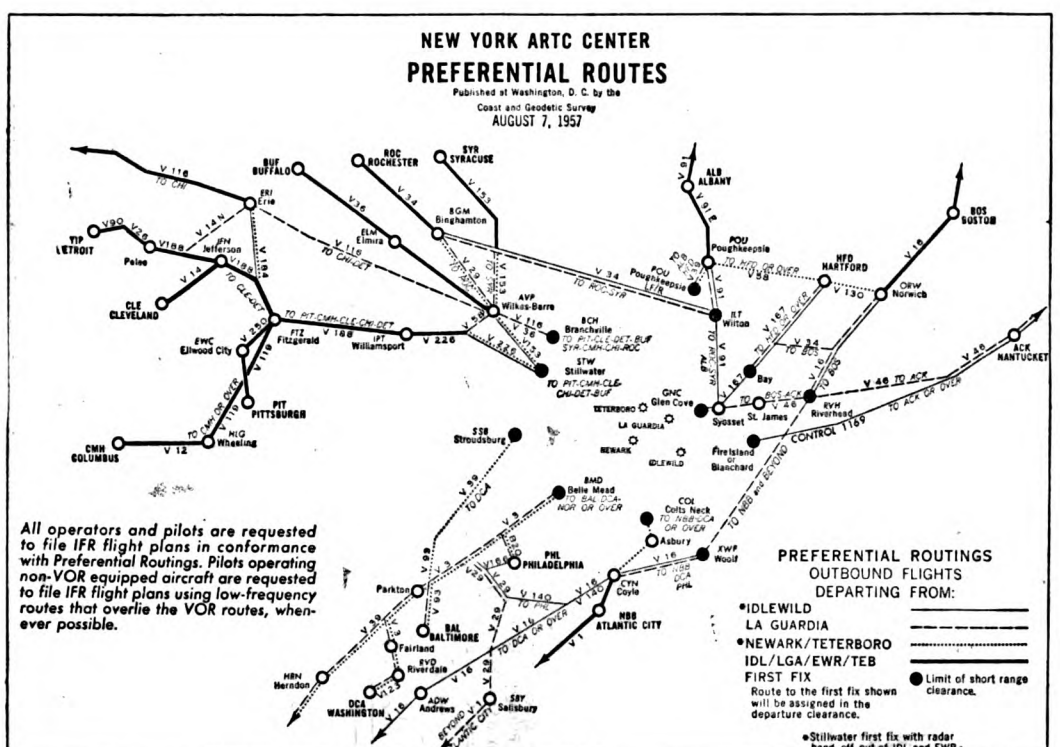
SAN JUAN-PUERTO RICO INTNL ARPT: Parking circles 2, 3, 4 and 5 on N departure ramp not fully visible from twr - caution. (6-7) Lgtd temp steel twr, 110' MSL, lctd approx 3500' off N boundary rnwy 7-25. (5-20)



REVISIONS TO STANDARD INSTRUMENT APPROACH PROCEDURES

Bearings, headings, courses & radials are magnetic. Elevations & altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.

CORRECTIONS

CINCINNATI, OHIO-LUNKEN ARPT, LFR Procedure 1, Amdt. 3, Effect. 5 Oct. 57: Under transition, column 3, change "224-7.7" to read "224-7.6"; Under ceiling & visibility minimums- A-dn, add 1000-2, 1000-2, 1000-2; and under Air Carrier Note, change "6:00 a.m." to "7:00 a.m." and "9:00 p.m." to "11:00 p.m.".

STANDARD INSTRUMENT APPROACH PROCEDURE—TYPE RADAR

If a radar instrument approach is conducted at the below named airport, it shall be in Accordance with the following instrument procedure, unless an approach is conducted in accordance with a different procedure authorized for such airport by the Administrator of Civil Aeronautics. Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the radar controller. From initial contact with radar to final authorized landing minimums, the instructions of the radar controller are mandatory except when (A) visual contact is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach. Except when the radar controller may direct otherwise prior to final approach, a missed approach shall be executed as provided below when (A) communication on final approach is lost for more than 5 seconds during a precision approach, or for more than 30 seconds during a surveillance approach; (B) directed by radar controller; (C) visual contact is not established upon descent to authorized landing minimums; or (D) if landing is not accomplished.

TRANSITION				CEILING AND VISIBILITY MINIMUMS			
From	To	Course and Distance	Minimum Altitude	Condition	Two Engine or Less: 65 Knots or Less	Two Engine or Less: More Than 65 Knots	More Than Two Engine, More Than 65 Knots
All directions	Radar site	within 20 mi	2000	Surveillance approach			
				T-dn	300-1	300-1	200-½
				C-dn	400-1	500-1	500-1½
				S-dn	400-1	400-1	400-1
				A-dn	800-2	800-2	800-2

Radar terminal area transition altitudes - all bearings and distances are from radar site with sector azimuths progressing clockwise. Radar control must provide 1000' clearance when within 3 miles or 500' clearance when within 3-5 miles of radio towers - 1221 MSL 6 mi. N, 1743 MSL 12 mi. WSW, and TV tower 2349 MSL 15 mi. SSE of airport.

If visual contact not established upon descent to authorized landing minimums or if landing not accomplished . . . . . (1) Runways 13 & 17, proceed direct to Grand Prairie MHW or to Grand Prairie Int via Britton VOR R-355, or, when directed by ATC, to Hensley Int via SE crs Carter ILS, climbing to 2000'; (2) Runways 31 &35, proceed direct to Carter LOM, Bedford Int via NW crs Carter ILS, climbing to 2000'.

STANDARD INSTRUMENT APPROACH PROCEDURE—TYPE ADF

If an instrument approach procedure of the above type is conducted at the below named airport, it shall be in accordance with the following instrument approach procedure, unless an approach is conducted in accordance with a different procedure for such airport authorized by the Administrator of Civil Aeronautics. Initial approaches shall be made over specified routes. Minimum altitudes shall correspond with those established for en route operation in the particular area or as set forth below.

TRANSITION				CEILING AND VISIBILITY MINIMUMS			
From	To	Course and Distance	Minimum Altitude	Condition	Two Engine or Less: 65 Knots or Less	Two Engine or Less: More Than 65 Knots	More Than Two Engine, More Than 65 Knots
				T-d	1000-1	1000-1

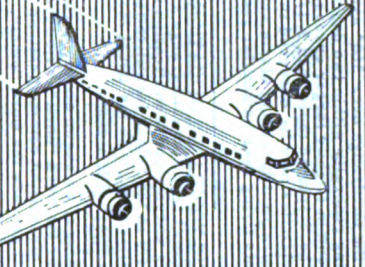
AIRMAN'S GUIDE



How to use this Guide - page 2

Notices to Airmen - page 2

VOL. 12 , NO. 15 **OCTOBER 1 , 1957**

The AIRMAN'S GUIDE is issued every two weeks. This issue includes all data on record as of 0001 E.S.T. on the above date. For later information consult Teletype NOTAMS.

U.S. DEPARTMENT OF COMMERCE
CIVIL AERONAUTICS ADMINISTRATION
GENERAL SERVICES OFFICE

✓ Indicates new or revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a Notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the General Services Office, Attention: W-120 (formerly W-52), CAA, Washington 25, D. C.)

Permanent airport data changes should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide

---

HOW TO USE THE AIRMAN'S GUIDE: The Airman's Guide is issued every two weeks. Every issue contains a Notices to Airmen section; every other issue additionally contains a Radio Facility Data section; and once each quarter the Directory of Airports appears in an issue containing both of these sections.

CONTENTS: The contents of each issue are noted on the front cover. The first page of each section carries the Legend for interpreting codified information. Material normally included in each section is as follows:

(1) Notices to Airmen: Gives current condition of facilities and any special flight regulations or restrictions; cites data changes which serve to correct less frequently issued publications or charts; included as Special Notices are amendments to restricted areas, location identifiers, minimum en route IFR altitudes, civil airways, control areas, control zones, reporting points, VOR check points, standard instrument approach procedures, etc.

(2) Radio Facility Data: Lists radar facilities, instrument landing systems, and all other aeronautical radio facilities with their transmitting and guarded frequencies, identification, station class, range courses and remarks.

(3) Directory of Airports: This codified directory covers airport type, class, elevation, runway length and number, lights, servicing, obstructions, fuel octanes, weather reports available, unicom available, and remarks.

SPECIAL NOTICES: Special Notices usually appear at the beginning of the Notices to Airmen section. Special Notices are frequently indicated on the front cover, giving the subject and page number where the information is found.

CIVIL USE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission.

In the case of Air Force Bases, pilots must have on file with Headquarters USAF a "HOLD HARMLESS" AF form 180 and in their possession a properly signed and executed AF form 181 permit. Application for these forms may be made to: Assistant Chief of Staff, Installations, HQ, USAF, Washington 25, D. C. This regulation will be strictly enforced.

For Naval Installations, prior permission should be requested from the Chief of Naval Operations (OP 532) via the Commanding Office of the field concerned, (who has the authority to approve landing rights for certain categories of civil aircraft). However, with minor exceptions, authority to use Navy field is granted only to aircraft on government business, or when no suitable civil airport is available in the vicinity.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

FLIGHT PLANS: Pilots are urged to file VFR flight plans in person or by telephone prior to departure. Radio should be used for filing flight plans only when it is impossible to file in person or by telephone. This procedure is necessary in order to avoid congestion on the already busy air-ground communications channels. These channels should be reserved for essential in-flight communications. All pilots will benefit by following this practice.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical locations. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations).

Omniranges where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification:

e.g. Long Beach omnirange (Voice) .-.. --- -.-. (LGB in Code)

For omniranges, as shown above, normal voice identification consists of the name of the omni followed by the word "omni". However, if the omni is unattended, i.e. if no facility for providing air-ground communications services is associated with the omni the word "unattended" will precede the word "omni". Example: AIRVILLE UNATTENDED OMNI.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciable higher rate of speed than the location identifier.

INTERFERENCE ON ATCS COMMUNICATIONS CHANNELS: If excessive interference is noted on ATCS VHF or UHF simplex frequencies, pilots should request the ATCS to reply on the VOR voice channel. (Reference to the Air Navigation Radio Aids Section will indicate which VORs have a voice channel). This will often expedite the exchange of messages as the VOR has a clear channel for communications.

NEW UNICOM FREQUENCY: Frequency 123.0 mc has been designated for UNICOM by the Federal Communications Commission where an airport is served by a control tower. Where there is no control tower, 122.8 mc is the frequency designated for use. Also 122.8 mc may be used by acft in civil defense work. These frequencies shall not be used for air traffic control purposes and only one UNICOM will be authorized at each landing facility.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget, April 23, 1956

For sale by Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. - Prices: annual subscription $2.25, domestic; $1.00 additional for foreign mailing; individual copies vary; this issue 20 cents.

RUNWAY VISUAL RANGE REPORTS AT NEWARK, N.J.: Effective March 3, 1956, measurements of runway visibility for Runway 4 at Newark, New Jersey, will be in terms of Runway Visual Range which is the distance high intensity runway lights can be seen by an observer located at the runway threshold viewing the lights in the same direction as a pilot making an approach.

The ILS and PAR instrument approach procedures for Newark have been amended to authorize 2600' of runway visual range as an additional operating minimum for straight-in approaches to Runway 4. When measurements of Runway Visual Range are being taken, the tower will give pilots intending to land straight-in on runway 4, the reported Runway Visual Range. When the meteorological ceiling and visibility (contained in "main body" of sequence report which is the average weather for the airport proper) are reported below minimums, (e.g. 200, 5), an approach may be conducted to Runway 4 provided Runway Visual Range is reported at or above 2600'. The "remarks" portion of the hourly weather sequence for Newark will report Runway Visual Range in hundreds of feet, and runway visibility will no longer be reported in miles and fraction.

Since Runway Visual Range recognizes the additional penetration provided by high intensity runway lights and is measured in terms of what a pilot actually sees, pilots will have better assurance of finding runway conditions substantially as reported when arriving over the threshold.

The Runway Visual Range minimum of 2600' is also based on the penetration ability of the approach lighting system installed at Newark which is designed to assure earlier transition from instrument to visual flight.

GLIDE SLOPE FLARE: Modification of null reference glide slope facilities will result in glide slope flare at about thirty (30) feet above runway. Caution advised on automatic approaches continued past runway threshold.

ATC PROCEDURES - APPROACH CONTROL: On page 66 of FIM, Volume 10, dated June 15, 1956, the following note should be added preceding the last paragraph:

"NOTE: A clearance for a specific type of approach (ILS, ADF, or Straight-in Approach) to an aircraft operating on an IFR flight plan does not necessarily mean that priority will be given over other traffic for a landing. Often because of local traffic or runway in use, it may be necessary for the controller, in the interest of safety, to provide a different landing sequence."

IFR RATE OF CLIMB OR DESCENT: In the interest of standardizing operating procedures for IFR flight and to provide greater utilization of available airspace, pilots are requested to adhere to the following procedure when cleared by air traffic control to climb or descend in excess of 1000 feet to an approved altitude:

1. Unless cleared otherwise by air traffic control, climb as rapidly as practicable to 1000 feet below the assigned altitude and then not to exceed 500 feet per minute until the assigned altitude is reached.
2. Unless cleared otherwise by air traffic control, descend as rapidly as practicable to 1000 feet above the assigned altitude and then not to exceed 500 feet per minute until the assigned altitude is reached.

ATC DEPARTURE CLEARANCES: Effective November 1, 1956, air traffic controllers will discontinue issuing departure clearances specifying that any portion of the departures shall be conducted in "VFR conditions" unless provision of positive separation will result in an excessive departure delay and the pilot indicates that he will accept a VFR restriction. To reduce communications and expedite departures wherever possible, pilots should include in their requests for departure clearances a statement that they will accept a VFR restriction either during climb to cruising altitude or to a specified altitude.

INABILITY TO COMPLY WITH ATC CLEARANCES: The pilot should always advise air traffic control when his aircraft is not equipped or its performance is insufficient to comply with an issued air traffic control clearance. A brief reason such as "unable account loads" or "unable transmit 3023.5" may be included if considered necessary for clarification. The pilot may then expect an amended air traffic control clearance.

NOTIFICATION OF NON-COMPLIANCE BY MILITARY AIRCRAFT: The 323rd Fighter-Bomber Wing, Bunker Hill AFB, Indiana is performing low altitude navigational training flights at two hundred feet for the purpose of pilot proficiency under the authority of Section 60.1(a) of the Civil Air Regulations. Route of flight: Bunker Hill AFB, Indiana heading 261° to Loda, Illinois; 280° to Lake Bloomington, Illinois; 059° to a point at latitude 40-55, longitude 88-24; 088° to latitude 40-53, longitude 86-53 (approximately 2 nautical mi North of Monon, Indiana); 112° climbing to traffic altitude to Bunker Hill AFB, Indiana, point of beginning.

The Army Aviation Training Detachment, Edward Gary Army Air Force Base, San Marcos, Texas, is conducting aerobatic training on civil airways V222 and V198 under authority of Part 60.1(a) of the Civil Air Regulations. The training activity is being conducted below 5000 feet MSL in VFR conditions between Smithville intersection and San Antonio VOR on V222, and between Eagle Lake and San Antonio VOR's on V198. Flights operating between those points on V222 and V198 at less than 5000 feet MSL should do so with extreme caution.

ATC PROCEDURES - RADAR TRAFFIC CONTROL: On page 67 of FIM, Volume 10, dated June 15, 1956, insert preceding the last sentence of the first paragraph:

"Therefore, aircraft must not deviate from headings issued by approach control and must not deviate from the normal final approach course unless a clearance to do so is received from air traffic control. After passing the approach fix (outermarker, radio range, etc.) on final approach, aircraft are expected to proceed straight to the airport and complete the apch or effect the missed approach procedure set forth for that airport".

And following the first sentence of the second paragraph, insert:

"Whenever the proposed routing beyond the short-range clearance limit differs from that filed in the original flight plan, the amended routing will be specified, in the short-range clearance issued to the pilot before takeoff. If a loss of two-way communications occurs, the pilot will be expected to follow the amended routing to filed flight plan route and/or destination. (Note: This procedure is also applicable when nonradar short-range clearance is issued)."

WASHINGTON, D. C. HIGH DENSITY AIR TRAFFIC ZONE: Effective April 15, 1957, all the airspace within the current boundaries of the Washington Control Zone extending upwards from the surface to and including an altitude of 3000 feet above the surface is designated as a High Density Traffic Zone, and the Washington National Airport is designated as a High Density Airport. Radio communication must be made with Washington National Airport control tower before commencing a take-off or landing at or entering, the traffic pattern of Washington National Airport, unless prior authorization from the Washington National Airport traffic control tower has been received by aircraft not equipped with functioning two-way radio.

Maximum speed within the zone is 180 mph or 160 knots indicated airspeed unless operational limitations for a particular aircraft require greater airspeeds, in which case the aircraft shall not be flown in excess of the minimum speed consistent with the safe operational limitations of the aircraft.

Pilots should use every effort to maintain a continuous listening watch while within the zone so as to receive any pertinent air traffic information which may be transmitted and thus be alerted to avoid collision hazard within zone.

TWO-WAY RADIO FAILURE: Under CAR 60.49 Radio Failure, pilots of IFR flights experiencing two-way radio failure are expected to adhere to the procedures prescribed on page 63 of the current Flight Information Manual under "Two-way Radio Failure," and "En Route Procedures."

However, if a pilot should become lost, or if other factors prevent the pilot from being able to comply with the provisions described on page 63, such pilots, as well as pilots of VFR flights, in the exercise of their emergency authority under CAR 60.2, may elect to attempt to alert civil or military radar systems by flying the appropriate pattern as described on page 49 of the current Flight Information Manual.

INTERFERENCE WITH SEARCH AND RESCUE OPERATIONS: Information received from air rescue units presents evidence that civilian pilots are interfering and, in some cases, jeopardizing aircraft engaged in rescue operations. Most of the instances are caused by pilots on sightseeing flights in the immediate area of an accident. Accordingly, the CAA Office of Flight Operations and Airworthiness strongly urges that pilots who are not engaged in the search and rescue operation refrain from conducting sightseeing flights at the scene of an accident while the rescue operations are being conducted.

RESTRICTED AREA AMENDMENTS: The following Restricted Area Amendments shall become effective as indicated:

(Part 608 - Restricted Area - Amendment 210)
(October 14, 1957)

Section 608.37, the New Boston, New Hampshire, area (R-48) amended May 4, 1956 in 21 F.R. 2977, is rescinded.

LOCATION IDENTIFIERS: The following changes affect the use of the location identifiers:

LUK Cincinnati, Ohio, Cincinnati-Lunken Arpt (change from CIN Oct 15)

ON REQUEST REPORTING POINTS: The following on request reporting points are designated, redesignated or cancelled and shall become effective as indicated:

DESIGNATED: October 15, 1957

(1) BRENTWOOD, N.Y. (VHF) INTSXN - the intsxn of the 076°M radial of the Idlewild, N.Y. VOR and the 185°M radial of the Wilton, Conn. VOR.

(2) SPARKHILL, N.Y. (VHF) INTSXN - the intsxn of the 360°M radial of the Idlewild, N.Y. VOR and the 249°M radial of the Wilton, Conn. VOR.

DESIGNATED: October 24, 1957

(1) APACHE, TEX. (VHF) INTSXN - the intsxn of the 263°M radial of the Stockton, Tex. VOR and the 105°M radial of the Hudspeth, Tex. VOR.

(2) HABY, TEX. (VHF) INTSXN - the intsxn of the 080°M radial of the Rocksprings, Tex. VOR and the 154°M radial of the Junction, Tex. VOR.

(3) HUNT, TEX. (VHF) INTSXN - the intsxn of the 080°M radial of the Rocksprings, Tex. VOR and the 136°M radial of the Junction, Tex. VOR.

(4) PANOCHE, CALIF. (LF) INTSXN - the intsxn of the S crs of the Stockton, Calif. LFR and the W crs of the Fresno, Calif. LFR.

(5) TRES, CALIF. (LF) INTSXN - the intsxn of the SE crs of the Oakland, Calif. LFR and the W crs of the Fresno LFR.

REDESIGNATED: October 24, 1957

(1) FLY CREEK, N.Y. (VHF) INTSXN - the intsxn of the 128°M radial of the Syracuse, N.Y. VOR and the 002°M radial of the De Lancey, N.Y. VOR.

(2) FOUNTAIN CITY, WIS. (VHF) INTSXN - the intsxn of the 307°M radial of the La Crosse, Wis. VOR and the 186°M radial of the Eau Claire, Wis. VOR and the 069°M radial of the Rochester, Minn. VOR.

(3) GILROY, CALIF. (LF) INTSXN - the intsxn of the SE crs of the Oakland, Calif. LFR and the S crs of the Travis, Calif. LFR.

CANCELLED: October 15, 1957

(1) LONG BEACH, N.Y. (LF & VHF) INTSXN - the intsxn of the SW crs of the Mitchel, N.Y. LFR and the 139°T radial of the Idlewild, N.Y. VOR.

(2) ORADELL, N.J. (VHF) INTSXN - the intsxn of the 081°M radial of the Caldwell, N.J. VOR and the 345°M radial of the Idlewild, N.Y. VOR.

CANCELLED: October 24, 1957

(1) MORGAN HILL, CALIF. (LF) INTSXN - the intsxn of the SE crs of the Oakland, Calif. LFR and the NW crs of the Fresno, Calif. LFR.

HOLDING PATTERNS: The following holding patterns have been designated, redesignated or cancelled as indicated:

DESIGNATED: October 15, 1957

(1) SPARKILL, N.Y. (VHF) INTSXN - direction of holding - SE on 360°M radial of the Idlewild, N.Y. VOR; direction of turns - left; time - 1 min.

(2) BRENTWOOD, N.Y. (VHF) INTSXN - direction of holding - E on 076°M radial of the Idlewild, N.Y. VOR; direction of turns; - left; time - 1 min.

CANCELLED: Effective October 15, 1957

(1) LONG BEACH, N.Y. (LF & VHF) INTSXN - direction of holding - SW on SW crs of the Mitchel, N.Y. LFR; direction of turns - right; time - 1 min.

(2) ORADELL, N.J. (VHF) INTSXN - direction of holding - SE on 345°M radial of the Idlewild, N.Y. VOR; direction of turns - right; time - 1 min.

1957 FLIGHT INFORMATION MANUAL NOW AVAILABLE: Flight Information Manual, Vol. II, dated August 15, 1957, is now available from the Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C., at 50 cents per copy.

AERONAUTICAL CHARTS OF THE U. S. COAST AND GEODETIC SURVEY

New editions of the charts listed below will be published in about one month making former prints obsolete for use in aviation. Orders for these particular charts should be kept to a minimum until new edition is printed.

El Paso	Roswell	Brownsville Local	WAC 406
Los Angeles	San Diego	RC 2214	WAC 407

AL 107 VOR - Dayton, Ohio - Dayton Arpt (Procedure cancelled 9-21-57)

ON TOP IFR OPERATIONS: Effective September 15, 1957, the phraseology, "at least 1000 on top" is changed to "VFR conditions on top." Pilots proposing IFR operation on top in lieu of a specific altitude should specify "VFR conditions on top" in filing an IFR flight plan. Operational requirements for operating at least 1000 on top continue to apply for operations in VFR conditions on top.

(1 October 1957)

RADIO INTERFERENCE (General): You can do your part toward reducing radio interference to aeronautical services from non-aeronautical sources which may be noted during flight if such is reported promptly to a CAA facility (preferably after landing) or to any FCC field office. Reports should state the frequency or channel affected, description of the interference, and the geographical area where the interference was observed. If known, reports should give the apparent cause of the interference such as radio stations, call letters when such can be identified, industrial plants, diathermy machines, power lines, television receivers, etc. Do not report interference caused by normal frequency congestion, i.e., signals from other aircraft using the frequency."

IDENTIFICATION OF AIRCRAFT: **Pilots are requested to exercise care that the identification of their aircraft is clearly transmitted in each contact with an ATC facility. Also, pilots should be certain that their aircraft are clearly identified in ATC transmissions before taking action on an ATC clearance. Garbled aircraft identifications in radiotelephone transmissions should never be taken for granted but should always be checked.**

ALTIMETER SETTING SERVICE - AIR ROUTE TRAFFIC CONTROL CENTERS:
The following governs issuance of altimeter settings by Air Route Traffic Control Centers to aircraft operating on an IFR flight plan and in direct communication with the Center:

1. Altimeter settings will be furnished, when requested by a pilot operating on an IFR flight plan, for those weather reporting stations within the center's control area.
2. Requests for altimeter settings at weather reporting stations not within the center's control area will be referred to the appropriate Air Traffic Communications Station.
3. The time and location of the weather station reporting the altimeter setting will be specified. The following phraseology will be used: The (Time) (Station Location) Altimeter (Setting) Example: "The One Four Three Zero Columbus Altimeter Three Zero Zero Two."

SIMULTANEOUS VOICE TRANSMISSIONS FROM A SINGLE LOCATION: At several CAA facilities, simultaneous voice transmissions are made from a single location. For example, the New York ATCS controls the transmitters at Idlewild, LaGuardia, Newark, Colts Neck, Caldwell and Wilton L/MF or VOR facilities.

To provide a uniformly brief announcement, generally for broadcast purposes, the name of the controlling facility, followed by the word AREA will be used, e.g., THIS IS NEW YORK AREA RADIO, etc.

Calls from aircraft will be answered using the name of the station as stated by the pilot, e.g., a pilot calling "Newark Radio" will be answered by the New York ATCS, "THIS IS NEWARK RADIO, etc."

The word "AREA" signifies that the transmission from the named (controlling) location is emanating simultaneously from one or more remotely controlled facilities, having a different name or names, as indicated in the ANRA Section of the AIRGI and/or applicable RF Charts.

A NOTAM will be issued from those facilities affected by the foregoing when the change to this procedure is made.

AIRPORT AND RADIO NOTICES

LEGEND

(3-31) - Month and day item was reported.
** - New or revised airport, caution area or miscellaneous data. Pilots should inscribe this information on charts and records.
✱ - New or revised radio data. Pilots should inscribe this information on charts and records.
NOTE: Because of space limitations, such data usually are cited only once.

ALABAMA: ANNISTON-RADIO: VOR courses 360°-07° have bends and roughness out of tolerance. (12-1)
AUBURN-OPELIKA ARPT: Lgtg facs inop. (7-6)
**BESSEMER ARPT: Name change. Formerly carried as Durham Arpt. (12-1) Ctn - auto drag strip runs parallel to sod lndg strip with separation of 50'. Auto racing is not done on rnwy. Drag strip ends mrkd. Racing Sun only. (9-28)
BIRMINGHAM-RADIO: VOR operg test basis only, at lat 33-40-11, long. 86-53-58, about 10 n mi NW Birmingham Mun arpt. (12-14) Caution - all arwys and Ints based on Birmingham or Meridian VORs are not usable for navigational purposes until the stns are recmsnd at new lctns. (4-18) Until cmsng VOR, V7E temp designated BHM LFR to Tanner Int via ADF track of 350°M from BHM LFR, MEA 4500'. (8-27)
BIRMINGHAM ARPT-TOWER: Aug 7, ILS MM and LMM shut down - relctn. (8-7) FLD: Caution - tfc operg in area from 165° clockwise thru 235° not visible from twr to dist of 4 s mi. Rnwy 8-26 perm clsd to high performance single eng conventional lndg gear type acft, including T-6. Rnwy 18-36 clsd between 0800-1700 daily unless otherwise advised by ctl twr. (7-9) Acft requiring after-burners prohibited use of arpt. Exten const work in progress SW end NE/SW rnwy. (4-9) ILS apch lgt lane shut down until approx thru Nov for relctn due rnwy ext. (5-1)
DOTHAN-NAPIER FLD: Caution - helicopters from Rucker Army Air Base trng.
EVERGREEN-RADIO: VOR radials 320°-360° out of tolerance account excessive roughness and bends. (9-23)
EVERGREEN-MIDDLETON ARPT, 20, MSY-ATL: Rnwy and threshold lgts inop. (2-6)
**FLOMATON ARPT: Now a private arpt;. (11-56)
HUNTSVILLE-RADIO: VOR radials 005°-030° have roughness and bends out of tolerance.
**HUNTSVILLE ARPT: Unicom decmsnd. (9-23)
MOBILE-RADIO: June 19, VOR arwy radials flgt-checked. Radial 018°-028° out of tolerance due to severe scalloping. (6-19)
MOBILE-BATES FLD-TOWER: June 18, ILS not to be used for automatic apch below 300'. Glide slope inop - equip and const vcnty transmitter bldg. (8-22) FLD: Unlgtd trees penetrate apch zone to all rnwys. Use caution;200' and 1/2 mi is absolute take-off min for all acft. (4-22) Due space shortage, all transient and lcl acft not permitted parking space on admin bldg ramp xcpt enplaning and deplaning passengers. Use facs E side of fld.
MONTGOMERY-SPECIAL NOTICE: All acft operg in the Maxwell AFB and Dannelly Fld ctl zones are cautioned to maintain cont rdo ctc with the appropriate ctl twr. Exten flying of both conventional and jet type acft in progress at both arpts. (4-19)
★MONTGOMERY-DANNELLY FLD-TOWER: Sept 26, trans and rcvr 119.7 cmsnd and trans and rcvr 119.5 mc decmsnd. FLD: Dips in E/W rnwy 1500' from E end. Lighted ditch approx 200' NE of apch end of rnwy 21. Twr unable to ctl taxiing acft on E/W taxiway from a point adj to ANG hangar to W end. Use caution taxiing. (2-11)
MUSCLE SHOALS-RADIO: VOR courses 020°-050°, 110°-150° and 285°-335° clockwise from stn out of tolerance beyond 15 n mi acct scalloping and bends. (11-2) Soon VOR will be relocated to lat 34-42-24, long. 87-29-27; change freq from 117.5 mc to 109.6 mc. (9-20)
**MUSCLE SHOALS ARPT: 358' (957'MSL) lgtd twr erected 6.1 n mi NW (322°T) at lat 34-49-07, long. 87-41-45. (9-18)
ARIZONA: AJO ARPT: Bcn and lgts inop. (6-18)
CLEMENCEAU-COTTONWOOD-CLEMENCEAU ARPT: All servicing temp suspended. Fld open days only. Rnwy avail ngts upon prior req. Emerg only. (4-23)
CLIFTON-GREENLEE-COUNTY ARPT: Clsd until approx 12-1-57. (9-17)
COCHISE-RADIO: VOR/DME coverage 015°-045°, 30 n mi; 090°-110°, 40 n mi; 190°-215°, 35 n mi; 215°-235°, 30 n mi; 235°-255°, 35 n mi at MEA. (5-8)
FT HUACHUCA-SPECIAL NOTICE: Caution - extensive artillery firing and drone flying in immediate vicinity. 2-way rdo and prior clearance from Libby AAF twr required before flight within R-181. Libby twr gds: 121.5, 122.5, 126.3, 126.18, 243.0 mc. Rdo bcn (FHU 410 kc) and TVORW (FHU 111.6 mc) only rdo aids to air nav suitable for normal use. Other experimental rdo nav aids oper from time to time not suitable for use under any circumstances. Army Electronic Proving Ground reports that on several occasions, civil acft have been endangered by failure to observe the requirements listed. (4-19)
GILA BEND-RADIO: VOR has slow bends and scalloping starting at 17 n mi and 8000'MSL on 247° radial beyond tolerance. (6-24)
GLEN CANYON DAM SITE-SPECIAL NOTICE: Pilots should not fly below canyon rim. Cables strung across canyon. (11-1)
GRAND CANYON-SPECIAL NOTICE: Pilots should not fly below rim of canyon. Cable not readily visible to acft strung across canyon lctd near Quartermaster Point in Lower Granite Gorge between Pierce Ferry and Spencer Canyon. (1-2)

ARIZONA: PHOENIX AREA-SPECIAL AIR TRAFFIC RULES: Acft operg under VFR or VFR conditions shall not be operd Mon-Fri from 0600-1800M on Green arwy No. 5 and Victor arwy 16 W of Phoenix in the areas described below xcpt at the alts prescribed therefor unless special permission is obtained from Air Tfc Control. From 112-28 to 112-35, which is the area between N-S lines drawn thru the Perryville FM and the town of Buckeye, between 700' above the surface and 5000'MSL, regardless of wea conditions. Further, when the reported ceiling at Phoenix is less than 8000', acft shall not be operd at alts above 2000'MSL and below 4000'MSL in the area between 112-16 and 112-28, which is the area between N-S lines drawn thru the town of Tolleson and Perryville FM. When the reported ceiling at Phoenix is 8000' or more, acft shall not be operd at alts above 7000'MSL and below 9000'MSL in the area between 112-10 and 112-28, which is the area between N-S lines drawn thru the town of Tolleson and the E edge of Glendale and the Perryville FM. (8-15) See page

PHOENIX-SKY HARBOR ARPT-SPECIAL NOTICE: Following changes in instrument apch procedures: LFR procedure: Initial apch from Perryville FM 4000, from Tolleson Int 2600. Missed apch: Climb to 2500 on W crs PHX LFR, - make right climbing turn returning to LFR. Hold on E crs LFR at 5000 in standard pattern within 15 mi. VOR procedure: Initial apch from Perryville FM 4000, from Tolleson Int 2600. Missed apch: Climb to 2500 on radial 258, make a right climbing turn, returning to VOR. Hold E of VOR on radial 076 at 5000 in standard pattern within 15 mi. Tolleson Int - Int GBN VOR radial 027 and PHX VOR radial 258 or W crs PHX LFR. All other items these procedures unchanged.

PHOENIX-SKY HARBOR ARPT: Clsd to mil F-89 type acft or acft rqrg use of after burners for take-off, xcpt prior permission arpt manager. (12-7) Men and equip along N edge rnwy 26L from apch end to a point approx 2000' W. (8-23)

PRESCOTT-RADIO: VOR coverage 185°-225°, 35 n mi at 10,000'; 135°-145° and 165°-185°, 39 n mi at 10,000'. About Oct 15, VOR will be shut down until approx Dec 15 - conversion to VORTAC. During this period, the following arwys will be unusable during IFR conditions. V12 EED-INW; V105 White Hills Int - PHX; V105E PRC-PHX. (9-23)

SAN SIMON-RADIO: VOR coverage 030°-070°, 30 n mi; 160°-260°, 30 n mi. (7-17)

SCOTTSDALE-THUNDERBIRD #2 ARPT: Clsd. (3-26)

TUCSON ARPT-SPECIAL NOTICE: As required, target towing on a direct route off arwy to Ajo, Ariz to be conducted week-ends - caution. (2-15)

TUCSON-RADIO: VOR/DME coverage: 360°-050°, 35 n mi 11,000'; 050°-060°, 22 n mi 11,000'; 060°-075°, 35 n mi 11,000'; 075°-085°, 21 n mi 11,000'; 090°-170°, 40 n mi 12,000'; 225°-230°, 40 n mi 7000'; 330°-345°, 35 n mi 11,000'; 345°-360°, 25 n mi 11,000'. (7-17)

TUCSON-DAVIS MONTHAN AFB-RADIO: USAF UHF/DF steers unreliable beyond 35 n mi at or below the following alt: (a) NW quad 10,000'; (b) SW quad 10,000'; (c) SE quad 12,000'; (d) NE quad 13,000'. (6-20)

YUMA-RADIO: VOR coverage 280°-300°, 30 n mi MEA. (5-18)

**YUMA-VINCENT AFB: All acft not equipped with 2-way rdo are advised to use extreme caution while operg within a 5 mi radius of arpt due to hvy jet tfc. B-57 type acft towing 10,000' of cable and tow target in vcnty. All acft refrain from flying in close proximity of B-57 type acft in Yuma area. (2-11) Jet barriers installed rnwy 3-21. (9-3)

ARKANSAS: BLYTHEVILLE-SPECIAL NOTICE: All acft operg under VFR adj to Blytheville AFB are advised to use extreme caution due to extensive IFR jet tfc. (7-18)

PINEBLUFF-RADIO: VOR shut down until approx Oct 1. During shutdown, VOR flgts authorized to use PBF homing fac in lieu VOR xcpt V16S TXK to PBF unusable. Ints and alts as charted. (9-15)

TEXARKANA-RADIO: DME coverage 145°-235°, 1700'MSL 30 n mi; 235°-270°, 1800'MSL 35 n mi. (5-21)

TEXARKANA MUN ARPT: 210' (510'MSL) lgtd twr being erected 12.5 n mi SSW (222°T) at lat 33-18-12, long. 94-09-31. (9-12) Corrects Airgi Vol 12, #14 - erroneously listed under Texas.

CALIFORNIA: APPLE VALLEY ARPT: Caution - const - men and equip on fld. (4-26)

**ARCATA-RADIO: VHF/DF cmsnd. Freqs: 122.1, 126.7, 121.5, 135.9 mc. Coverage 40 n mi at MEA xcpt 030°-040°, 11,000'; 040°-060°, 12,000'; 060°-090°, 13,500'. (8-19)

*BAKERSFIELD-RADIO: Sept 18, transmitter 122.2 mc cmsnd.

*BAKERSFIELD-KERN CO ARPT-TOWER: Effect Sept 29, twr hrs opern 0600-2200.

BASS LAKE-WISHON ARPT: Clsd to all operns until further notice. (8-23)

BLYTHE-RADIO: VOR/DME coverage 45 n mi xcpt 25 n mi 180°-200°; 30 n mi 280°-300°; 20 n mi 300°-320°; 35 n mi 345°-015° at MEA. (8-20)

CALIFORNIA: BONSALL-SHEARER'S RANCH ARPT: Abandoned until further notice. (2-4)

BRIDGEPORT-BRYANT ARPT: Const on ctr 40' entire length of rnwy. Acft use area either side of const zone. (9-11)

CAMARILLO-RADIO: All coursee have multiples. (6-17)

CRESCENT CITY-RADIO: VOR arwy radials flgt-checked. Courses 90°-330° usable dist 22 n mi; 350°-90°, 26 n mi at 7000'; 43 n mi at 8000'.

DAGGETT-RADIO: VOR flgt-checked on arwy radials only.

DINUBA-ALTA ARPT: Arpt unlgtd. (4-22)

DIXON ARPT: Closed. (8-30)

ELSINORE ARPT: Caution - glider activity weekends. Squirrel holes S edge of lndg area.

FAIRFIELD-TRAVIS AFB-RADIO: LF rng has splits and multiples beyond 20 mi. (8-27)

FILLMORE-RADIO: VOR coverage 320°-355°, 35 n mi at 11,000'; 280°-320°, 26 n mi 11,000'

**FORT BRAGG-UNION LUMBER COMPANY ARPT: Now a private arpt. (2-5)

FT. JONES-RADIO: VOR has lgt course roughness all quads. Only arwy radials flight-checked. Sept. 19, VOR shut down until approx Oct 17 - modernization. Durg this period the following arwys will be unusable for IFR opern: V23 Red Bluff - Talent Int.; V23E Fort Jones - Klamath Junction Int. The Bray Int. will be unusable. (9-19)

FORTUNA-RADIO: VOR has lgt to moderate scalloping beyond 26 n mi. Only arwy radials flgt-checked. (10-6) DME coverage 335°-350°, 43 n mi at 3000'; 350°-10°, 43 n mi at 8000'; 10°-30°, 43 n mi at 9000'; 30°-120°, 35 n mi at 9000'; 120°-150°, 35 n mi at 6500'; 150°-335°, over water, not checked.

FRANKLIN ARPT: Rnwy 15-33 clsd. (7-12)

FRESNO-RADIO: About Oct 21, LF rng will be shut down for approx 3 days - tune-up and course realignment to 76A 136 N 256 A 316 N. (9-17)

FRESNO-AIR TERMINAL-TOWER: Sept 16, ILS glide slope shut down until approx Oct 19 - relctn. FLD: Extreme caution advised in vicinity of arpt, particularly when using VOR arwys. Jet acft climbing and descending in areas of extended centerlines rnwys 11-29 and areas N & E of arpt. Const and equip. both ends rnwy 11-29 and adj taxiways.

**GASQUET ARPT: Caution. Road materials piled S side. (9-23)

**GLENDALE-GRAND CENTRAL ARPT: NW/SE taxi strips SW side of fld perm clsd. Extensive const in progress. Fld clsd to all acft at sunset. (10-5)

LONG BEACH-RADIO: DME coverage 43 n mi as follows: 280°-305°, 5000'; 305°-340° 7000'; 340°-040°, 12,000'; 040°-070°, 8000'; 070°-100°, 7000'; 100°-280°, 4000'.

LONG BEACH ARPT-TOWER: ILS glide slope subject to indef shtudown periods during arpt const. (8-18) VHF/DF bearings unreliable below 12,000' MSL SW quad between 200' and 230°. (5-6) About Oct 15, radar arrival control will be cmsnd. Primary holding fixes will be Huntington Beach FM and Albacore Intsxn. (9-13) FLD: Several 230' MSL portable oil derricks NW, W and S of fld. No fuel servicing avail. for civil acft 2400-0600. Neon apch lgt lane rnwy 30 discontd indefinitely. (1-1) Caution - temp p-line with wooden poles 29' high serving const camp erected approx 315' S of and roughly parallel to apch end rnwy 30 for 800'. (3-22) Rnwy 30 clsd all lndgs 0700-1500P wk-days only due 100' booms in apch area. First 800' rnwy 30 and adj taxiways clsd const; 6200' avail. lndgs and tk-offs. Rnwy 12 clsd. Until further notice, straight-in ILS lndg min rnwy 30 daylgt hrs only - 500'/1 mi.

LOS ANGELES-RADIO-SPECIAL NOTICE: Transcribed wea bdcasts shut down - modernization. Manual bdcast continues on VOR and both VOR & LF combined. (4-26)

LOS ANGELES-RADIO: VOR coverage 275°-315°, 30 n mi at min en route alt. Light to moderate scalloping below 3000' MSL. (10-23)

LOS ANGELES INTERNATIONAL ARPT-TOWER: VHF/DF unreliable 045°-060° below

** 13,000'MSL beyond 30 n mi. (4-19) FLD: Use paved areas only. New lgtd rnwy 16-34 approx 4000' W of Sepulveda Blvd clsd - avail 30-min req thru twr. Equip. crossing rnwy. During VFR wea conditions, civil acft ctc twr on 118.9 mc or listen 118.9 mc, trans 122.7 mc at least 10 mi out. During IFR wea, civil acft ctc Apch Ctl on 118.1 or 119.3, or listen 118.1 or 119.3 mc and trans 122.7 mc. USAF-NAVY-CG: VHF equipped acft ctc Apch Ctl on 118.1 or 119.3 mc. UHF equipped acft ctc Apch ctl on 250.2 or 269.0 mc. Pilots are urged to use extreme caution when operg off-shore W of arpt. All jet acft departing rnwys 25L-25R climbing in VFR conditions use a 200° departure corridor which originates at a maximum of 3000' MSL, approx intsxn of extended centerlines of above rnwys with the shoreline. Acft proceeding E-bound from Malibu or Pt. Dume intsxns in VFR conditions making a track which approx extended centerlines of above rnwys are cautioned not to descend below 4000' MSL until passing shoreline or Los Angeles Omni, unless cleared otherwise by ATC. Jet acft pat downwind leg is 1500' MSL. Acft not intending lndg at arpt should avoid apch areas to W of arpt and E of arpt between Downey rbn and arpt below 3000' in VFR wea. If desiring to cross apch area below 3000' ctc Los Angeles Apch Ctl before crossing. Recommended cross tfc plan crossing course at 3000' or above ceiling permitting,

CALIFORNIA: directly over arpt or between LFR and arpt. Avoid shoreline W due hi-performance jet acft. Due non-visibility twr unable to ctl tfc las6 2400' rnwy 34. Nov. 30, transmissiometer cmsnd, furnishing rnwy visibility for rnwys 25L and 25R. Visibility to be added to observations when prevailing visibility is less than 1-1/2 mi. Hi-intensity apch lgts rnwy 25L converted to centerline system extending 3000' E of rnwy pavement. Apch lgt lane sequenced flashers avail. on test basis at pilot's request. Flashers extend from 1200' to 3000' from end rnwy 25L. (7-11)

LUCERNE VALLEY-DOUBLE J RCH ARPT: Length of strip reported increased to 3000'.

MENDOTA ARPT: New arpt reported. Lctd 1/4 mi E; elev: 174'; 1 rnwy - (15-33) - 2300' x 90' (dirt & sand compact) remarks - 6' fence at each end. (7-23)

MOFFETT FIELD-SPECIAL NOTICE: Due to hvy jet tfc, acft operg vicinity Moffett Field ctl zone in VFR wea exercise extreme caution passing thru ctl zone at alts below 2000' VFR and below 4000' during stratus conditions. (6-17)

★MONTEREY-PENINSULA ARPT-RADIO: ILS cmsnd. Lclzr freq: 110.0 mc, without voice. Ident: MRY. Lctd 1000' E of E end rnwy 10-28 on centerline. Glide slope freq: 334.4 mc. Lctd 825' from apch end rnwy 10-28 and 236' N of rnwy centerline. Glide slope angle: 3°. Apch bear.: 96° mag. LMM freq 260 kc, ident: RY. MM lctd 0.52 mi from apch end rnwy. LOM freq: 278 kc, ident: MR. OM lctd 4.12 mi from apch end rnwy. Unusable for auto apchs. (9-21)

OAKLAND-SPECIAL NOTICE: Pilots proposing transbay flgt should ascertain that VFR wea exists within both San Francisco and Oakland Control Zones, or should obtain ATC clearance for flgt within a ctl zone when wea is less than VFR, since ceiling and visibility mid-bay is frequently less than at the two terminals. Rotating beam ceilometer in operation. Hereafter ceiling observations of less than 1500' will usually pertain to the middle marker location. Tfc operg in VFR wea should avoid vcnty of Alameda NAS. Extensive tfc including jets operate in tfc pat up to 2000' within a radius of 1.7 n mi of fld. Exercise extreme caution in these areas.

OAKLAND-RADIO-SPECIAL NOTICE: Military acft planning to use VFR communications and proposing IFR flight into Oakland, Alameda NAS or Hayward should contact Oakland Approach Control on 118.1 mc, or proposing IFR flight into San Francisco should contact San Francisco Approach Control on 118.5 mc. Communications during IFR flight should not be conducted with Oakland Approach Control or San Francisco Approach Control utilizing the freq 126.18 mc unless 118.1 mc or 118.5 mc is not avail. Due to extreme congestion, 126.18 mc is not considered a suitable communications channel for IFR flight into Oakland, Alameda NAS, Hayward or San Francisco. (7-18)

OAKLAND-RADIO: VOR coverage 35 n mi N thru E at min instr alt. (1-14) DME coverage 30°-60°, 26 n mi at 5000'; 60°-80°, 35 n mi at 5000'; 280°-290°, 35 n mi at 4000'; 340°-350°, 35 n mi at 6000'; 350°-030°, 17 n mi at 4000'.

OAKLAND-AIR ROUTE TRAFFIC CONTROL CENTER-SPECIAL NOTICE: Jet approaches and lndgs at Oakland, San Francisco and Sacramento, as depicted on apch plates JAL-294-RNG, JAL-375-RNG and JAL-358-ADF, are to be used for emerg only. (4-24)

★OAKLAND-METROPOLITAN-OAKLAND INTNL ARPT-TOWER: VHF/DF coverage 40 n mi at MEA xcpt 340°-030°, 6500'; 030°-040°, 8000'; 040°-060°, 6000' MSL. (8-6) VHF/DF freq 135.9 mc replaced by 140.22 mc. Add 118.9 mc. (9-26) FLD: Dredging and clam shell equip working S of lndg area. All booms and equip. lgtd and mrkd. Use extreme caution when flying over or within this area. Non-rdo acft rqrd to req permission from twr for clearance; make left hand pat before lndg. (1030) Transmissometer cmsnd giving rnwy visibility observations rnwys 27L and R. (8-22)

OCEANSIDE-RADIO: July 10, VOR shut down until approx Oct 1 - modernization. During this period the following arwys will be affected: V23 LGB-SAN; V208 CAX-TRM when usable. Flgts departing LAX via V208 will be cleared from intsxn LAX VOR radial 170 and LGB VOR radial 205 direct to Avalon LF Int. R65 to OCN durg shutdown period.

ONTARIO-RADIO: VOR/DME coverage 135°-150°, 26 n mi at 7000'; 150°-200°, 17 n mi at 7000'; 200°-280°, 35 n mi at 7000'; 330°-350°, 26 n mi at 13,000'; 350°-360°, 35 n mi at 13,000'. (7-30)

ONTARIO INTNL ARPT: Make turns on or off taxiway S side rnwy 7-25 at intsxns only. Eng run-ups in take-off position rnwy 7-25 prohibited less than 200' from ends of rnwy as marked by yellow paint lines either side. Formation take-offs and lndgs prohibited except ANG 196th Fighter Interceptor acft. Due to non-visibility twr unable to ctl tfc on ANG ramp and taxiway leading to ANG hangar area. (7-16) Acft not lndg at arpt should avoid apch and departure areas E and W below 3000' MSL in VFR wea. Twr tfc operg in E quad should exercise caution acct exten simulated IFR apchs including jets VFR wea and actual apchs IFR wea. (3-13)

CALIFORNIA: PALMDALE-RADIO: VOR coverage 120°-150°, 35 n mi at 10,000'; 150°-180°, 35 n mi at 9000'. (3-14)

PASO-ROBLES-RADIO: DME coverage 220°-235°, 35 n mi at 6000'; 235°-245°, 26 n mi at 6000'; 245°-270°, 35 n mi at 6000'. (7-5)

POMONA-SPECIAL NOTICE: Intermittently during daylgt hrs captive test balloons 5'in diameter moored 300' above terrain will be flown over Convair Plant 2 mi W-adj to Pomona Heliport. (9-20)

POMONA-BRACKETT FLD: Operative during reconstruction. Caution - men and equip.

RED BLUFF-RADIO: DME coverage 225°-245°, 35 n mi at 10,000'. (6-30)

SACRAMENTO ARPT: Twr tfc operg in SW quad should exercise caution acct extensive simulated instr apchs including jets VFR weather, actual apchs IFR weather. (4-2)

SALINAS-RADIO: VOR coverage 20°-95° and 135°-295°, 35 n mi at min instr alt. DME coverage 20°-44°, 26 n mi at 7000'; 44°-49°, 17 n mi at 7000'; 49°-90°, 26 n mi at 7000'; 90-130°, 43 n mi at 7000'; 130°-145°, 26 n mi at 7000'; 145°-153°, 17 n mi at 7000'; 153°-180°, 26 n mi at 7000'; 180°-225°, 43 n mi at 7000'; 225°-300°, 43 n mi at 5000'; 300°-20°, 43 n mi at 7000'.

SAN DIEGO-RADIO: VOR coverage 50 mi MEA all quads xcpt 20 mi MEA from 310° to 330°.

SAN DIEGO-LINDBERGH FIELD: 500' W end rnwy 9-27 clsd - jet barrier. (2-29) Work in progress rnwy 9-27. (9-13)

SAN FRANCISCO: See Oakland Control Zone Notam.

SAN FRANCISCO-RADIO-SPECIAL NOTICE: Acft not on IFR flight plan and not desiring IFR apch, requested to make initial call to San Francisco Twr, freq 119.1 mc. (7-25)
